>bill wb9ivr

ok. now i have a novice callsign, waiting for tech+, upgraded to advanced.
my current 610 *seems* complete, because it says i am currently a
novice class *license* holder, with csce for tech+ through advanced,
(section 1 atop 610, to be filled in by the ve's), which makes it
eligible for a new call.

so, if i get this right, the vec, which has (likely, hopefully) sent
my first 610 to fcc for tech+ upgrade, goes back over the records, and
says "ah, here is a guy who has upgraded, and waiting for a new call,
but here is yet another application from him for more upgrades and
another new callsign. i am going to sit on this application until
he sends me his copy of this new tech+ license."

is this correct or am i missing something obvious?

krishna
kb8fav/aa

obvequery: reading the fcc rule book (rtfm!), i gather that any
organization can enter into a contract with the fcc to be a vec,
and accredit ve's. so, how does one become a w5fy (?) ve? how
do arrl and w5fy ve's differ?

Hello again fellow Hams
1. This post is being forwarded to ARRL.HQ

I am in need of PR information to start a membership drive here
on our campus. I will be forming a University / Public Service
/ Hobbie PR article for our F/S news paper and our Student News paper.
This news item, hopefully will also be aired on the campus NPR Radio station

Any information you can give or advice <goodness, stuck my foot in my mouth on
this one> to offer please let me know.

One piece of GOOD NEWS I found out about over the weekend is that
a Fellow Amateur in the Ashland/Flatwoods Kentucky area is going to give
the Greenup County Kentucky Rescue Squad Members a 2 day class on the
NO Code Tech and then the evening of the second night of classes test them
for their license.

I think this is a good thing.

It would certainly be a fine jest. Here in the old country there is an old tradition of faking expensive possessions - the family that had a TV antenna erected 40 years ago, even though they could not afford the TV set itself but wanted to impress the neighbours - Fake cellphones and car antennae are still available. Did the person have a Hong-Kong blow moulded Icom look-alike?

I still think the string was interesting from the point of wondering "What should I do if I see someone who APPEARS to be breaking the law" I suppose I make a value judgement, we all see cars at sinful speeds every day, yet who drives to the cop-shop to report them? If I saw someone very drunk getting into a car, I think I'd then look for a phone. Perhaps people consider the risk of loss or injury. This net does make a lot of people look like armchair vigelantes. (If no-one broke laws on the North American continent, would it still be a British or Spanish colony?)

If it is, it's one of his best.

Cheers
David GM4ZNX

JOTA this year is October 16 - 17. With the date/time difference it usually means we don't have many/any Stateside contacts on the first day! This year we'll be under canvas at Tatum Park, a permanent scout camp and conference centre, about 60 miles north of Wellington on the west coast. Listen for ZL2ALY on whatever band propogation allows!! I'm with the Paparangi and Newlands scout groups. As well as HF & VHF we'll have packet - the address:- ZL2ALY@ZL2WA #63.WLG.NZL.OC
Have fun! 73. Cliff. ZL2ALY

1037. Digital radio - monitor needed for MS victim

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 16:16:11 UTC
From: Dave_Hood.MENLOPARK2@unix_link.raynet.com
Message-ID: <9308251553.AA18990@raynet.com>
Source record: 277403
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.swap

When I was back visiting family and friends in western Nebraska earlier this summer, I talked with an old friend (Jim McCafferty) who asked if I could help find a donated monitor for an MS victim (Mike). Mike was extremely depressed during the development of the disease, even suicidal. Computer ham radio has given him something to be interested in and cheered him up considerably. The problem is that his monitor died.

I asked Jim for a little more information about the monitor and about Mike. Here are the pertinent parts of his letter:

"Treatment is complicated for the victim (Mike) since he
"is a Medicaid patient and totally dependent upon the
"welfare system. His father had a stroke in July and now
"they are both in the Crestview Care Center!

"Briefly, Mike (age 33) started MS with rapid onset
"about four or five years ago. The course was
"precipitous and at age 30 he was placed on a permanent
"basis in the Care Center. The only treatment I know of
"other than the initial diagnosis and testing as an
"employee of GP Express Airlines has been an extended
"course of antibiotics administered by a physician from
"the Veterans' hospital in Hot Springs. It was
"unsuccessful. Deterioration has been very slow in the
"past two years and I notice slurring of the speech
"increasing slightly and loss of muscle tone in his legs
"since he sort of drags his wheelchair along with his
"heels and now will accept a push where he refused help
"when I first met him. He is a stubborn one... Needless
"to say, ham radio gives him something to get up to each
"day and he spends a great deal of time snooping through
"the packet BBs throughout the area.

"The monitor that fried was a Samsung 14" color using a
"composite color input and a sound input compatible with
"the Commodore 64 computer system. Repairs are not
"possible as parts are no longer made for that monitor
"so Mike is still squinting at a 9" B&W.

I'm posting this because Jim isn't tied into the internet. If you can help, please contact Jim McCafferty, POB 68, Whitney, Nebraska, 69367. (Sorry I don't have his phone number.)

1038. Re: Want Ten Tec OMNI elmer / help!

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 16:24:55 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CC809J.5t2@hpqmoea.sqf.hp.com>
Source record: 277563
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I don't know the Omni, but I've had a few Corsairs apart. Something fishy on one band only would send me looking for a dud switch contact as a first effort.

Pin diodes are super el-thicko devices with very very slow reaction times. Before they realise that the applied voltage has reversed, they have conducted backwards for a long time. Turning a PIN diode on with a little DC forwards current creates charge carriers in the "I" region of undoped semiconductor, making it conductive. HF signals are so fast that the diode can carry AC currents exceeding the DC bias current. The diode just sees the average current which is the forwards bias current as the ac signal has an average of zero. This still holds good irrespective of the amplitude of the HF signal.

Things only go wrong if our RF signal is too low in freq for the diode concerned, and it starts to rectify it a little. At very low frequencies it behaves like a low quality normal diode.

As long as the freq is favourable, the PIN diode looks like a 2 terminal RF resistor whose impedance is programmed by its DC current. for a typical small sig device, it could present about one Ohm to the RF with 10-20mA DC bias, and look like 1pF if the bias is switched off. The device just looks like an increasing resistance as the bias is reduced until the stay C dominates. Any of the usual techniques for making attenuators out of variable resistors can now be used.

I'm surprised at using a PIN on 160m, most are starting to react down there, a common rule of thumb for average pins is to use them above 10MHz if you want good low distortion.

Cheers
David GM4ZNX

1039. WANTED: Fisher R-200-B FM-AM Multi-Band Shortwave Tuner

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 16:28:44 UTC
From: acp@cray.com
Message-ID: <1993Aug23.112844.27329@hemlock.cray.com>
Source record: 277566
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.swap

I'm looking for a Fisher R-200-B FM-Stereo, AM Multi-Band
Short Wave Tuner.

This tuner was made in the mid-sixties and featured 3 short
wave bands as well as the traditional AM and FM bands. It's
appearance is quite similar to other tuners of that vintage.

Other Fisher components I'm looking for are the model 400-CX
Stereo Master Control (Pre-Amp) and the model SA-1000 Stereo
Power Amp.

If you should have any of these components or know of where I
might be able to find them I'd appreciate hearing from you.

Thanks

Tony Peterson (612) 422-8889 or (612) 683-5621 acp@palm.cray.com

I have an HP AC-60B "Bridging" transformer. Does anyone out there have the original specifications on this audio beast ? I'm mainly interested in the longitudinal balance, return loss & and frenuency range spec.s for the record.

These units are quite old and no longer in the HP catalogs, but there are still some of us out here who use this analog stuff.

Seth T. KC2WE

>great deal. Romeo's whole news release can be downloaded from the
>BARF-80 BBS (under DX News and Rumors, bulletin 20) at 216-237-8208.

Anyone have more details of this nightmare ? (don't have LL modem access)
I would like to get a copy of the complete news release if someone can forward
it. Has the ARRL or any other country file a complaint ?

1044. IC735 used suppliers?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 18:17:26 UTC
From: norton@joker.optics.rochester.edu
Message-ID: <NORTON.93Aug23141726@joker.optics.rochester.edu>
Source record: 277576

Can anyone give me the name of some suppliers which might have the
IC735 in their stock? I tried AES but they're out, so Im trying to
find some other possible suppliers. Id prefer to try to get this
used transceiver through a retail outlet to insure some warranty.
Thanx!
Send email to norton@joker.optics.rochester.edu
PS Thanx everyone who replied to my query about transceiver opinions!

1045. 5A0RR Report

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 19:14:27 UTC
From: mikewood@rock.concert.net
Message-ID: <25b4uj$ir3@inxs.concert.net>
Source record: 277570

Below is the full content of the message from Romeo, 5A0RR from
the BARF-80 BBS.

Date: Wed Aug 18 18:16:50 1993
From: reisert@wrksys.enet.dec.com (Jim Reisert AD1C 18-Aug-1993 1820)
Subject: 5A0RR "Trip Report" from Romeo (via W1GG, WB2DHY, NT2X)
To: dx@wrksys.enet.dec.com

Msg #567 From: W1GG Date: 18-Aug 1648Z Subj: 5A & More de Romeo!

Copy of message. From: WB2DHY To: W1GG Date: 18-Aug-1993 1648Z

The following was received by Ed, NT2X, who did the
Russian/English translation.

LIBYAN DXPEDITION

Originally, plans called for the use of six amateur radio
operators for 5A. Due to the lack of funding we had to limit
ourselves to three operators: Said, who currently holds the
call sign 5A0RR, Danny, LZ2UU and myself.

During the operation, which lasted five days, we worked over
11,000 stations.

This DXpedition coincided with the International Arab Summit
being held in Cairo. With mounting pressure from the world-wide
ham community, we were focused on commencement of the operation
and gave very little consideration to the Arab Summit.
National security throughout the region was at a fever pitch.
The Dxpedition was terminated when Danny and I were accused by
Libyan counter-intelligence and Egyptian police of planning to
assassinate both President Mubarek and Libyan Leader Quaddafy.
To make matters worse and even more bizarre, they said we were
using ham radio as a cover for illegal drug trafficking by
communicating with Turkish ships in the ports of Benghazi and
Alexendria, Of course, these charges were absurd and insanely
ridiculous. We were both arrested and placed in the Libyan
prison system. We spent many weeks in prison and were held
incommunicado. Our constant requests to speak with consular
officials from Russia and Bulgaria were met with insults and
abuse. This unpleasant experience, the details of which I will
not go into at this time, has caused my health to deteriorate
greatly and I am currently under doctor's care and receiving
medical treatment. Fortunately, events unfolded resulting in
our release, which was nothing short of miraculous. Perhaps,
in time, this story will be told.

Said, 5A0RR, will continue to operate from Libya under this call sign which is in effect for two years. We left him an FT-990, a FL-7000 amp and a Mosley antenna. He is an outstanding CW operator but might be limited in his SSB operating since we didn't have the opportunity to train him in this mode.

Copies of the 5A0RR logs are in Bulgaria. QSL's are being sent.

If my medical condition permits, I hope to travel to the United States soon. At that time I will present the documentation for the 5A-Libyan operation to the American Radio Relay League. I also have in my possession the additional documentation requested by the ARRL for the P5-North Korean DXpedition.

The unwarranted and undeserved criticisms, along with false charges, leveled in my direction from the amateur radio community (some of which were anonymous), have disturbed me a great deal. I was disappointed to see how few hams supported me or rallied to my defense. Truly, it is this experience above all else which gives me great cause to consider discontinuing my efforts to put the very rarest countries on the air.

To those of you world-wide who throughout the years have always shown your friendship, support and encouragement, THANK YOU VERY MUCH! I will always cherish our relationship as well as all the great moments and memories.

Warmest regards.

73,

Romeo, 3W3RR/AH0M/RV7RR/EK0RR/XY0RR/IS0RR/9D0RR/YA0RR/5A0RR
and forty-five other call signs.

I took mine on June 8 and is still waiting. Somebody else on the net told me ARRL is sending cards to new examinees telling them to wait for 12 weeks after their tests.
Welcome to the club and 73's.

1050. IC728 vs. IC735 anyone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 20:49:42 UTC
From: norton@joker.optics.rochester.edu
Message-ID: <NORTON.93Aug23164942@joker.optics.rochester.edu>
Source record: 277484

I'm trying to compare the IC728 vs. the IC735 transceivers. I
have QST's reviews in front of me but am still uncertain about
trade-offs (my first rig). Is it better to go the more modern route
with the IC728 with its speech processor, flexible memory (ie more
modern digital goodies) or go the IC735 route which might have better
overall sound quality (does it?).
If anyone could fill me in, I'd really appreciate it.
Thanx!

The Jamboree On The Air is always the 3rd weekend in October. This year,
that puts it October 16-17. It starts officially at 0000Z on Oct 16 and ends
the same time October 18.

I have a SWR meter that was designed to be used for HF frequencies.
Is it possible to modify it to work on 2 meters?

It is a older version of the current Radio Shack SWR/FS meter
model number: 21-523. Now I realize that many people make cheep meters
(i.e. Radio Shack and MFJ inc.), but I need a project to bide me over
while waiting for my Code-Freed Tech. ticket to arrive
(9.5 weeks and counting!). It is also more in keeping with our hobby
to self-educate and to have "made it myself".

If someone would like to wax-eloquently on what exactly a SWR meter
is really measuring in term that this Electrical Engineer can understand,
I sure would appreciate it.

73's all
and be seeing you on the RF soon,
I hope!

1058. Packet radio addresses and internet

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-23 22:57:34 UTC
From: barspi@wam.umd.edu
Message-ID: <25bi0u$nd9@cville-srv.wam.umd.edu>
Source record: 277480

During my vacations in my home country, Uruguay, last month, a friend of
mine introduced me to amateur packet radio. I didn't know anything about radio
and still am quite confused in some aspects. He has an address like this:
CX8BU@CX2ACB.MVD.URY.SA
This address looks like an internet address, so my question is if I can send
hime e-mail to that address and if there is a gateway between the two nets.
I know that there are gateways between internet and fidonet and between fidonet
and packet radio.
Also, I would like to know where I can find more info on this subject. Today
I got a FAQ for rec.radio.amateur.digital.misc and it directed me to this group

Thank you for any info.

Sorry about posting this this way, but (as you will see below) I'm not sure I can email this and get it through. Besides, I'm sure others have had the same problem - if necessary, maybe we can compare notes a bit and find a solution to this.

I got this on a recent request to info@arrl.org:

From: MAILER-DAEMON@uu.psi.com
Date: Fri, 20 Aug 93 17:25:54 -0400
Subject: Returned mail: Unable to deliver mail
Message-ID: <9308202125.AB18110@uu.psi.com>
To: ben@nj8j.atl.ga.us

----- Transcript of session follows -----
554 arrlhq!info... arrlhq is an unknown UUCP host

Obviously, I've edited out Received: headers and the contents of my submission. Based on what appears above, I can take a stab at what the problem is. I'm guessing that:

1. arrlhq is an old and abandoned UUCP name for arrl.org
2. some site between mine and uu.psi.com, using an old UUCP map, is translating info@arrl.org to .....!arrlhq!info.
3. uu.psi.com doesn't know that arrlhq is an alias for arrl.org.

This could, of course, be fixed at 3 by getting uu.psi.com to recognize arrlhq as a valid alias for arrl.org. I'll let others with more experience with PSI say whether or not this is feasible. If not, perhaps those of us who have gottened bounced info@arrl.org mail can compare notes and see if we can pin down the site that's using the old maps?

Hello,

I took the exams for novice and tech+ on June 10th and am still waiting for
the license.

I have used this time to put up some antennas, build a keyer, and practise
to send with the keyer. Listening on the bands is fun too.

Talk to you people later. 73

Yes, but all that's left of the original when you're done is the case
and meter movement. As I recall it's a form of the Monimatch circuit.
Basically that's a short transmission line segment that has an additional
wire inside the shield for a short distance. That wire is terminated
at one end by a resistor of the line's characteristic impedance, and
by a diode and a meter on the other end. There's usually a switch
so you can swap the line ends to measure forward and reflected signal
components, and a variable resistor to set the sensitivity of the
unit. This circuit can be used at VHF if the construction symmetry
is good enough, and if strays are controlled well enough. Unfortunately,
this style of instrument is frequency sensitive, and the pickup wire
offers too much coupling at VHF in order to get a reading at HF. And
this particular meter doesn't maintain symmetry, or control strays
very well. So you need to build a new line section to get reliable
readings at VHF.

>I sure would appreciate it.

Well what we usually actually measure is the line VSWR, the Voltage
Standing Wave Ratio, though we could equally measure the Current Standing
Wave Ratio, and we do in different kinds of bridge circuits. First a
few basics.

A transmission line has a characteristic impedance. That's the impedance
a generator would see if it impressed a pulse on an infinitely long line
segment. This impedance exists because of the distributed inductance and
capacitance of the line. Since that's purely reactive, no power is dissipated
in the line, but since the line is infinitely long, it appears to the
generator that the power has been dissipated in the "load" presented by
the line. If we replace the infinite line segment with a finite length
line and terminate it in a resistor of the line's characteristic impedance,

from the generator's point of view nothing will have changed. That's called a perfectly matched line. As far as the generator is concerned, it's looking directly into a resistor of the line's characteristic impedance. If you take a voltage reading anywhere along the line, you'll get a value that's related to the generator's power by the relation E=sqrt(P*R) where E is the voltage, P is generator power, and R is the line characteristic impedance. Similarly, if you measured the current anywhere along the line, I=sqrt(P/R), and the current and voltage waveforms will be *in phase*. Remember we're dealing with AC here, and AC across a resistor will be in phase, and to the generator the line looks like a resistor.

Now suppose the line is *not* terminated in a resistor of the line's characteristic impedance. Let's first look at two extreme cases. If the line is *open*, then current will be zero and voltage will be maximum, a very high impedance point. Note that the voltage and current are now out of phase by 90 degrees. When the voltage collapses, it will induce a current in the wire that will travel in the opposite direction from the incoming wave, or forward wave, back toward the generator. Since it's moving along a line with a characteristic impedance, it will in turn generate a voltage on the line, also travelling toward the generator. Voltage and current waves will once again be in phase, but travelling in a different direction. This is called the reflected wave. If the line is shorted instead of open, then voltage goes to zero, and current becomes maximum, a very low impedance. The same things happen to the waves as in the open case except that the signs of the phases are reversed. Now if we take the case where the line is terminated in a finite impedance, but different from the line's characteristic impedance, we'll get part of the incident wave absorbed in the load, and part reflected by the mismatch.

Ok, now what do we see if we measure the voltage along the line? Since we now have two waves, forward and reflected, moving along the same line, and that line has a characteristic impedance, we'll measure a voltage at any given point on the line that's the vector sum of the two waves at that point. Since the two waves differ in phase by the distance they've travelled along the line, we won't see a constant voltage. Instead we will see a sinewave variation of the voltage as we move along the line. Since the line is of fixed length, the travel time differences between the waves will be in a fixed relationship and this sinewave will appear to *stand* still on the line. Hence Standing Wave. The relationship between the forward and reflected voltages can be expressed as a ratio in the following form, VSWR=(Vf+Vr)/(Vf-Vr). Note that for a perfectly matched line Vr=0 and VSWR becomes simply Vf/Vf or 1. So an SWR of 1:1 means a perfect match.

Now this would all be pretty academic if we couldn't separate Vf and Vr so we could measure them. Various bridge type circuits can be used to separate the two wave components by taking advantage of non-reciprocal properties of the bridge circuit. We can also take advantage of the properties of travelling waves in the monimatch

to do the same thing. It's difficult to show how to build a VSWR meter without drawings, so I'll refer you to the instrument on page 27-11 of The ARRL Antenna Book for a line section that will work at VHF/UHF and that can be made out of ordinary copper plumbing fixtures.

>well with strong, vertical signals. A 4-element quad is much better overall.

Well it's true that the doppler, actually it's a time difference of arrival circuit, will work on a strong signal while a beam will often not give a good null. However, polarization of the transmit antenna isn't an issue unless the cross polarization loss is so great that the signal can't be heard. Beams are only really useful if the signal is weak enough into the receiver to get a relative strength indication. A step attenuator can help here. The doppler doesn't care if the signal is weak or strong, it merely measures the difference in time of arrival of the wavefront from one antenna to the other. Both methods can be fooled by strong multipath, but the doppler display lets you *know* you're in a multipath situation while the beam does not. Doppler systems are great because they work well while you are mobile in motion, giving you a continous readout of the relative bearing of the fox.

1064. Control Operators

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-24 05:26:00 UTC
From: lker@ecst.csuchico.edu
Message-ID: <25c8p8INNls3@charnel.ecst.csuchico.edu>
Source record: 277491

I have a question for people of the news group to answer.
What are your feelings on people under 18 years of age being
a control operator for an average, generic repeater system (ie no
autopatch, links, etc). What about a fully loaded repeater (ie with
autopatch, reverse patch, message boxes, etc)?

There are several people trying to answer that very question.
Several are for the idea and several are against.

History of repeater use:
ARES functions during times of disasters.
Community civic communication provided when asked for by
organizations.

* General repeat function
* Autopatch
* Reverse patch (autopatch)
* Signal report
* Time
* Message box
* No links

I would like to here from both owners and users of repeaters alike.
This feedback will help in making the decision to give or not to give
people under the age of 18 control codes for the repeater system.

Any comments should be E-Mailed to (lker@ecst.csuchico.edu).
Thanks in advance for your response(s).

Lowell Voelker KC6SBJ
lker@ecst.csuchico.edu

1065. Aircraft Headset interface?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-24 05:46:58 UTC
From: kb2ear@kb2ear.ampr.org
Message-ID: <1736@kb2ear.ampr.org>
Source record: 277504

Hi, I have an aircraft headset that I would like to interface with my radios. I need to know if and where I can find the mic connector used on the headset either in an inline config or something I can mount in a box. The headphone portion seems to work in a standard 1/4 inch socket. What will I need to supply to the Mic? Any voltage? Has anyone interfaced there radios to there headsets in this way?

Please reply via email as I do not get a chance to read this group often.

Thanks, 73,

SB SPCL ARL ARLX014
ARLX014 FAR scholarships picked

20-year-old Diane R. Magen, KG5CS, of Grand Forks, North Dakota, is the top 1993 Foundation for Amateur Radio scholarship winner.

FAR on August 11 announced 49 winners, ranging from Diane's 2000 dollar(s) to a number of 500 dollar(s) scholarships. The non-profit FAR administers scholarships for organizations including the Quarter Century Wireless Association, the Radio Club of America, the Young Ladies Radio League, and a number of local and regional Amateur Radio clubs.

Magen's award is the Rose Ellen Bills Memorial Scholarship; the second-highest award, 1200, dollar(s) was the YLRL Scholarship, awarded to 19-year-old Diane M. Weldon, KA1NOJ, of Marlborough, Mass.

Information on FAR scholarships is available from FAR, 6903 Rhode Island Ave., College Park MD 20740.

ARLX015 Canadians to convene

The Radio Amateurs of Canada have scheduled their first national
convention for July 29-31, 1994, in Calgary, Alberta.

The RAC has issued a call for papers to be presented at the
convention's technical syposium. Topics to be considered include
HF, VHF, UHF, packet, AMTOR, RTTY, AMSAT, and EME.

Interested amateurs should submit by October 15 a proposal including
title, introduction, and abstract. The first draft of papers will
be due by March 1, 1994.

More information is available from G.W. Shand, VE6BLI, 55 - 51551
Range Road 212A, Sherwood Park AB T8B 1B2. (FAX) 403-438-4398.

>I have an OMNI-D series C.
>I have 50 db less receive on ONE band only. 160 meters is
>way down, all the other bands seem OK.

The radio is probably working to specification, it is the preselector design which is imperfect. Ten Tec try to cover 160 through 10 M with a pair of capacitively top-coupled tuned circuits. This is asking too much when they only switch padders across the coils and keep the coupling cap fixed. As I recall it is 10 pf, but anyway it is too small on 160. I increased mine somewhat (about twice as much), but you sacrifice selectivity on HF as a result.

Reaching said capacitor involves dismantling the whole preselector assembly. It is `character building', as they say.

Alan G3XAQ.

1070. Any fix for a locked-up MT-1000 ?

1072. Optoelectronics Spy Equipment

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-24 12:13:22 UTC
From: mraz@maverick.AUd.alcatel.COM
Message-ID: <9308241213.AA02120@maverick.aud.alcatel.com>
Source record: 277499

The Optoelectronics ad on page 157 of Sept. QST contains all manner of electronics seemingly unrelated to amateur radio. The best I can make out from their obtuse ad copy, they're selling stuff used to eavesdrop on cellular phones. For instance, the Model CF802 is described as an "835MHz +/- 10Mhz filter/amplifier for use with near field instruments such as the Model R10 Interceptor ... to extend the pick up distance [up to 750 ft.] by limiting the bandwidth and adding amplification". The Model R10 is used to "Decode & Display CTCSS, DTMF or DCS & DTMF simultaneously".

Frankly I'm surprised that QST would accept an ad such as this. It belongs in Popular Mercenary and its ilk not in ham radio.

But I'd like someone to convince me I'm wrong. Is there a legitimate use for these devices?

The best thing to do is Don't. I Didn't look in my mail box for it, i didn't
hope for it. 3 months went by and i had it. I was happy the day it came, but
once it comes its here and you feel like, "Gawd, i waited long enough".. heh
But if you ask me, just don't be in such suspense, it will be tehre when it
is..

>Welcome to the club and 73's.

Just something that i was corrected on here. The correct term is not
73's because
1. Its not plural.
2. Its not possesing anything
3. The correct way to say it is "Seven Three", not "Seventy-Three"

Message-ID: <9308241258.AA29314@umassmed.UMMED.EDU>
Source record: 277502

I've been looking in vain for a book which will describe the various bands from the point of view of an experienced operator. I.e. describing each band in terms of it's characteristics during each part of the day, during each season, explaining each section of the band in detail. For instance it might describe parts of 20 m warning about the idiots who use blue language and name calling around 14.312 and when they are likely to be on, It might describe when the band opens up and when it shuts down in different seasons. Where to find dx, where to call for a rag chew. It might describe the various DX nets, the O.F. ragchew nets which don't mind newcomers checking in and those that don't.

I know you eventually learn all this by operating, but I find myself hanging out on one band and not really using the others because I'm not sure where to go and too lazy to spend the effort to learn each band. If there isn't a book like this, I think this would be a welcome addition to what's out there.

1076. Power supply safety

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-24 14:13:49 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9308241413.AA02534@tix.timeplex.com>
Source record: 277503

There was a posting a few weeks ago about use of the ground screw on a Drake AC-4 power supply. Since I had a problem posting at that time, here is my reply again.

The Drake AC4 supply was probably designed before the appropriate UR (UL component recognition) approvals existed. However equipment of new design that uses a class I power supply (not double insulated) with a metal case and has hazardous voltages inside (ac line voltage is considered hazardous) should carry a UR approval if it is to be used or sold to be used with another unit, e.g. a radio transceiver. Utility supplies like the Astron line should be UL approved (no Astron units are to my knowledge carry any approvals from a recognized testing agency). To get a UL or UR approval for the AC-4 today, among other things the power cord would have to have an integral grounding means (three wire cord). The external ground screw is not suitable in lieu of this required ground. So if you want to buy only UL listed power supplies as a stand alone unit and that is a requirement for your purchase to ensure that a reasonable level of safety standards have been met, then don't by un-certified equipment. After witnessing the resultant aftermath of a fire inside an AStron un-certified supply, I have since refused to bring anything into my home (other than stuff I build myself) that isn't carrying some safety approval. Some municipalities do not permit stores to sell any plug/cord appliances that don't carry safety approvals. The end result is that if injury or fire results, the offending vendor may have a liability problem, including the store that sold the unit.

To answer the question about the AC-4, since it was made prior to the current regulatory requirements for consumer safety, it is not improper to use, however it probably doesn't comply with current standards for component supplies (UR recognition).

Source record: 277505

In part two of rec.radio.amateur.misc's FAQ, there's a question that says, "Are there any news groups for CAP?" Well, the answer mentions a ftp site where you can get CAP-related files. It says that you can get them sunburn.cps.udayton.edu in the directory pub/capital.

The problem is that I can't seem to log into the ftp site. It does NOT recognize the user anonymous or ftp. Does anybody know what the proper login/USER is? Or maybe the files have been moved to another site.

If anyone has any information on this please e-mail me AND post a reply article to this newsgroup.

Thank you.

I don't know about that Donald - I lived in Rochester NY when the guys who wrote the original QST article that the Roanoake box is based on built theirs for the monthly fox hunts. Once they got the bugs out, I don't think they ever lost a hunt. It may not be the perfect solution in all situations, but it sure seemed to work for them!☐☐ (I think the group eventually changed the rules to put the doppler stuff in a separate catagory so someone else could win once in a while) Particularly nice is the ability to use it while in motion, where the multipath and other stuff appears as 'noise' on the display while the direct signal appears as the steadier source. I suspec that these days, coupling one of them to a laptop and doing some sort of histogram on the signal position would make that real obvious.

Anyway, *I'm* definately interested in building one of them, in my copious free time... :-)

1083. RTTY at 170 Hz shift, why?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-24 15:31:09 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9308241531.AA03236@tix.timeplex.com>
Source record: 277508

This is a reply to an old question posted a few weeks ago and I don't recall the exact subject wording.

.....

The problem of HF RTTY frequency shift standards and usage is probably a combination of engineering criteria, practical application and some arbitrary selection. When I was in the Army (1969-72) assigned to the US Army Transmitter site in the Canal Zone, we used 10 and 40 KW PEP transmitters on three curtain rhombics. When propagation was good, we probably had a signal to noise ratio of better than 30 dB to the distant end receiver site. The military did use multi channel telegraph as it was called with a 42.5 +/_ Hz shift with a range of 85 Hz shift. These transmissions were made with ISB (independent sideband) and inserted carrier -20 dB down. The distant end locked on to the reduced carrier signal. Besides, we might have a couple HZ drift in a 24 hr. period (probably less than 2 Hz). There was no problem decoding 42.5 Hz shift at 74.5 baud. Because of the fact that the receive side locked on to the pilot carrier, very narrow shifts were practical. This enabled the military to transmit multiple rtty channels on the same signal (I think there were 24 channels of teletype traffic).

The problem with using narrow shift is that due to unpredictable S/N (when your not using a 40 KW transmitter) and taking into consideration Shannon's Law regarding bandwidth vs. signal rate (baud rate) there is a practical limit to the fsk speed. If the S/N is poor, then reliability even at 170 Hz can be a problem. In the amateur radio world we don't send a 20 dB down pilot tone and we don't run 10 KW or more for better S/N. So in the old days of single channel radio teletype, to ensure reliable communications in a noisy environment when frequency stability was also not as good as today, 850 Hz became the standard. A analysis of an 850 Hz shift signal at 45.5 or 50 baud, results in a bandwidth approx. occupied by a single nominal HF voice channel. As receiver and transmitter stability improved over the years, lower shifts were selected to reduce occupied bandwidth.

The value of 170 Hz was standardized by the Navy as a shift (a neat multiple of the old military 42.5 Hz shift system). 170 Hz was selected as it met the criteria for a combination of the S/N needs on single channel HF RTTY transmissions, state of the art in transmitter/receiver stability and the need to transmit higher baud rates. If they tried to send higher baud rates which are common today, at 42.5 Hz shift the transmission would be garbled due to intersymbol interference within the FSK envelope. Also, when

selecting a new single channel radio teletype frequency shift standard the military did not want to always count on having enormous amounts of RF power and antenna gain to have very high S/N ratios.

Seth T. KC2WE: The opinions are mine and not those of any other party.

Please note: Not a problem in Canada (No definition, hence no restrictions,
on `auxilliary' operation. This falls under Remote Control).

But does anyone know if a Simplex, or Full Duplex AutoPatch requires a Canadian
Advanced Certificate (to allow one to be a repeater custodian, but the patches
are not `repeaters')? I have my Advanced, but just wondering if I sell my
equipment ...

>In general, unless you are just wishing to experiment, I think
>you'll be better served by buying a cellular telephone. They
>free you of all the amateur restrictions and generally have
>much better coverage.

Agreed, they are also *far* cheaper (a dual Band HT costs more than a
CellPhone, two, as this guy intends to use, are even worse!)

>I have a [Rat Shack] SWR meter ... designed to be used for HF frequencies.
>Is it possible to modify it to work on 2 meters?

Not likely, not without gutting it and replacing the electronics entirely.
SWR meters below 30 MHz usually use a toroidal sense transformer whose
sensitivity drops with frequency; my Heathkit SWR meter came with a second
toroid for those who wanted to build it as a 6-meter (only) version. 144MHz
is high enough that you really start having to worry about parasitic inductance
and capacitance, and the usual scheme is difficult to make work. However,
there is a scheme that takes advantage of parasitic inductance for VHF SWR
meters (called the Monimatch); probably some version of the ARRL Handbook
has it (go buy one, now, just on general principles), though the 1984 copy I
keep in my office doesn't. The Monimatch is essentially a transmission-line
transformer built on epoxy circuit board.

>
> If someone would like to wax-eloquently on what exactly a SWR meter
>is really measuring in term that this Electrical Engineer can understand,
>I sure would appreciate it.
>
If you *really* want your eloquence waxed, go buy a copy of Maxwell's
"Reflections", sold by the ARRL (in fact, buy one even if you DON'T), but
here goes: an SWR meter measures the power going to the load and the
power reflected back down the transmission line by the load. (Well, OK,
it usually measures the voltages, but that's just a detail.) Some meters
use a bridge scheme to obtain a ratio of the two to directly read SWR (which
is equal to (Vf+Vr)/(Vf-Vr)), others just display forward and reverse power
and let you figure it out (very fancy meters use crossed needles on one meter
face to allow you to read forward and reverse power WHILE directly reading
SWR). Where does the reflected power come from? While the forward wave is
travelling up the line, it has a definite voltage and current whose ratio is
set by the characteristic impedance of the line; each successive bit of the
line "accepts" the power from the previous bit and offers it the same ratio.
When the power hits the load, if the load has the same characteristic
impedance, then it can accept all the power presented; if not, however,
then suddenly V/I no longer equals R, and something has to give; the load
wind up accepting some of the power, and the rest reflects back down the line,
possibly with a phase shift as well. When that reflected wave hits the
generator (in the case of a transmitter, the generator's impedance is usually
not even close to the characteristic impedance it wants to see presented to
it), the power entirely (or nearly so) reflects back toward the load, cycling
back and forth until cable losses make it vanish.

The job of a Transmatch, by the way, is not to make the antenna's impedance equal to 50 ohms (which it can't unless it is physically located at the antenna feedpoint); it is to present the transmitter with a 50-ohm load (a 50-ohm transmission line with a mismatched load will have an effective impedance of something other than 50 ohms). Most solid state transmitters generate power most efficiently when presented with their design impedance, and contain high-SWR shutdown circuitry to avoid burning up by inefficiently generating RF power when presented with the wrong load.

Source record: 277445

I recently moved from Michigan to Indiana, but have held onto my callsign; it's long but I've grown used to it. I ordered a mass of QSL cards, but now I'm wondering:

1) My call sign is listed as WB8TIM not WB8TIM/9, is that going to mess people up for prefix awards? If I write in the /9 by hand is it acceptable? Actually, I'd rather not, because it would just mess up the card, but if it is necessary for some award ...

2) I did put the county name on, but what other information (beyond the standard format and my address) is helpful for people trying to achieve awards?

3) If I operate mobile, say in a different county and/or state, what is the best way to indicate this on the QSL card, so that it is clear that I didn't operate from my home address?

On a related topic, I've started entering a few contests -- do I need to sign with the /9 in all contests, or just the WPX contests?

Thanks in advance for the help.

Paul,

If you're thinking of the fabulous Pinelands RBBS run by Tom Sundstrom, W2XQ, which was in Vincentown, New Jersey, I'm sorry to inform you that it closed down in April 1993. Most of it's radio-related files and such have been transferred to the Pics Online BBS in Atco, New Jersey, run by SysOp Terry Rossi, N2LQH. It's a six-line BBS at 609-753-2540.

BTW, if anyone knows where a decent up-to-date landline BBS listing can be downloaded via anonymous FTP, please let me know. The two best I've seen are generated by Stan Staten, W3INK, of Gaithersburg, Maryland, SysOp of the 3 WINKs BBS; and by Mike Stone (call sign?) of someplace in the Midwest (Iowa?). I like to keep my resource files up to date.

Thanks!

Also, remember that ARRL HQ runs a multiline Wildcat! BBS on 203-666-0578 (up to 14.4 kbit/s) that includes a lot of handy ham files; utilities; ARRL/W1AW bulletins; ARRL Letter archive files; League Field Organization info; ham, SWL and scanner logging software; TCP/IP NOS programs; packet terminal apps; satellite tracking programs and Keps etc...and message bases. The SysOp is ARRL Field Services Dept Deputy Manager Luck Hurder, KY1T.

Have phun!

Doug,

Suck down some text from Usenet/Internet, import it into your word processor, then print or save it to disk as a plain ASCII text file. That should work.

BTW, I think the best Morse code tutor for IBM/compatibles is SUPER MORSE (current version is 4.06, I believe) by Lee Murrah, WD5CID, of Cedar Rapids, Iowa. It's around for anonymous FTP from several sites or it can be downloaded fom Compu$erve or the ARRL HQ BBS (203-666-0578, 14.4 kbit/s). Look for a file with a name like SM406.ZIP.

Try it! I have found that many of the cheap SWR meters work passable
well on 2 meters as-is. If it reads close to 1:1 into a good 50-ohm load,
and reads infinity into an open circuit, then it is probably usable.

Chuck,

I've never taken a hand-held radio to Dayton, so I can't answer that
specifically, but I've been to lots of smaller but quite crowded hamfests
and flea markets, and I never hear a pip out of the speaker unless
someone's on my frequency. And the Centurion rubber-duck antenna I put on
(replacing the "dummy load" it comes with) brings up repeaters locally with
one or two more LCD units than the factory jobbie. I hear okay from 140-174
MHz with the IC-2GAT, but I haven't heard any spurious off-channel noise to
speak of.

Not quite. We have a uucp name, arrlhq, that is serviced by the
University of Hartford. It was, at one time, our only mail/news link.
When we changed to an Internet connection, using the arrl.org domain,
we left arrlhq in existence so that those with outdated alias files
wouldn't experience service interruptions. The U of H automatically
forwards received arrlhq mail to arrl.org. But there has *never*
been any correspondence established between arrlhq and arrl.org, at
least, not by me. I'd be interested to know where it's happening.

In short:
There is an arrlhq, which is reached through the University of
Hartford (uhasun).

There is an arrl.org (MX), reacjed through uu2.psi.com.

They are not the same thing, and no mapping should say they are.

A quick fix:
info%arrl.org@uu2.psi.com
That should work (although it *is* ugly!)

Steve--

I have found a couple of sources useful. For general descriptions of the bands, the ARRL Operating Manual has a very useful chapter that talks generally about the characteristics of each band, band by band.

For more specific and current information, the Propagation column in the magazine "CQ" has a lot of descriptive information. In relatively non-technical language, they describe the current characteristics of the bands, summarize which is likely to be the best when and provide propagation charts. QST has useful graphic charts on a monthly basis, but they don't have the descriptive stuff that I find useful.

None of them, however, talk about the unpleasantness of the on-the-air conflicts and unfortunate language that is an embarrassment to us all. That, I guess, you have to discover for yourself. Too bad it exists at all.

Good luck and have fun.

1100. Help with Kenwood TS-820S

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-24 20:49:23 UTC
From: saswel@unx.sas.COM
Message-ID: <199308241949.AA06191@cardamom.unx.sas.com>
Source record: 277516

I am in the need of some assistance. I have a Kenwood TS-820S that doesn't seem to be generating enough RF power output. I have replaced the tubes with a matched pair of GE 6146Bs which has helped a bit, but it still seems to not be generating the punch that I think that it should.

First off, I have to admit that I do not have any test equipment except for a cheap multi-meter and my grasp of general electronics is pretty limited(I understand the theory, just have trouble with application).

Here is my dilemma. After following the proper tune up procedures described in the manual into a dummy load I am observing the following results. On CW on all Novice sub-bands with a plate current at the required 200ma I get about 60 watts out measured on the SWR/Watt meter. This seems a bit low, but, I have not had any problems contacting any station that I can hear via CW. On 10 meter phone(which seems to be where the problem lies) I only get about 30-40 watts out at voice peaks. I've tried cranking the CAR and MIC gain controls up all the way, but, that only yields about 5 more watts out.

Anybody have any experience with this rig that can tell me if these numbers are reasonable and if not what steps I could take to remedy the problem?

Tnx es 73s - Warren (KD4YRN)

|>

200 mA of plate current for two 6146B's seems kind of low; my old Johnson Ranger has a single 6146, and it gets loaded up to about 140 mA on CW. It sounds like you may not be loading the final as heavily as you should be. Cranking the CAR and MIC controls will only do bad things to your signal quality. The grid current for a 6146 should be about 2.5 to 3 mA for full output, so you should see 5-6 mA on key-down for CW. I would expect a plate current reading closer to 300 mA too.

Check the operating manuals again, and see what they say. Good luck!

It`s just like the federal Government, "You can't know something unless you already know it".

I find it interesting that you can't join MARS unless you have a radio that can work 2 of their HF frequencies yet you can't modify your radio to work these frequencies unless you have a MARS call sign. :-)

MARS (Military Affiliate Radio System) Frequencies.

Here is a list of frequencies givin to me in a pamphlet sent by the Airforce MARS chief. Frequencies in brackets were derived from other sources. It would be nice to have this added to the FAQ. :^)

```
--------------------
+ Air Force MARS +
--------------------

HF - 3190.5 kHz
HF - 4590.0 kHz
HF - 4832.0 kHz
HF - 7313.5 kHz
VHF - 49.980 mHz
VHF - (148.125 mHz packet)
VHF - 143.45 [(-1.3 split)], and other VHF Freqs.

-------------
+ Army MARS +
-------------

HF - 3348.5 kHz
HF - 6997.5 kHz
HF - 14403.5 kHz
HF - 40.95 mHz
VHF - 143.99 mHz [? Split] and Other VHF Freqs.

--------------------
+ Navy-Marine MARS +
--------------------

HF - 3190.5 kHz
HF - 4042.5 kHz, (4003.5 kHz)
HF - 7382.5 kHz, (7363.5 kHz, 7500 kHz)
HF - 13975.5 kHz
HF - 14385.0 kHz
HF - 20998.5 kHz
VHF - 148.375 mHz [? split],

SPECTRONICS DD-1C DIGITAL FREQUENCY DISPLAY (used in conjunction with
the COLLINS KWM2/2A
transceivers).
Sent to: Gary Bishop, NQ0V

All items below sent to: Steve Miller, KD2ED. Steve said he'd be more
than happy to photocopy manuals for anyone else. Just send him an
SASE.

COLLINS KWN-2 and KWM-2A TRANSCIEVERS

COLLINS 312B-4 & 312B-5 STATION CONTROLS

COLLINS SM-3 MICROPHONE

MAGNUM SIX RF SPEACH PROCESSOR

All INSTRUCTION/OPERATORS MANUALS are in various states of condition.
Some are in good condition and some are in poor condition.

The intent is to give these INSTRUCTION/OPERATOR MANUALS to an
individual or entity who ACTUALLY has the equipment.

The first person to send me e-mail gets the booty. Please send a
separate e-mail request for each INSTRUCTION OR OPERATORS MANUAL. You
will be asked to send a SASE (large manila or other envelope) with the
appropriate amount of U.S. postage to me c/o the address in my .sig
file.

For those of you who are interested, the reason these INSTRUCTION/
OPERATOR MANUALS are available is because some

$(%&*#+=$_$)* IDIOT

trashed (read distroyed) the University of California, Irvine, WB6KGN
amateur radio club ham station. All of the equipment was rendered
unusable. There wasn't anything to salvage (except the
instruction/operator manuals. So, there you have it.

Don't be suprised if it takes me a while to get back to you. I am
very busy these days. All requests will be answered.

Good luck to one and all.

73,

>and reads infinity into an open circuit, then it is probably usable.

If the SWR 'engine' isn't usable (in my experience, it usually isn't),
you could try to make a new engine. I did something like:
1. Take a small piece of RG213 (or other, requirements are
cable as thick as possible; solid dielectricum, woven braid)
2. Gently remove the outer isolation (gently! has to be put back later on)
Cutting on the length side of the cable gives best results.
3. Push the outer braid in (like a harmonica), so the inner diameter
raises and the solid inner coax cable can be easily removed;
4. Put two thin, isolated wired wires (e.g. teflon 'wire wrap' wire)
in parallel to the inner conductor of the coax (the part you took out in
step 3); the ends of the wire should be accessible later
5. Re-apply the braid you took out in step 3. Make shure that the 4 ends
of the wire you added remain accessible; peel them trough the braid.
Make shure that you re-apply the braid as neatly as possible; the
impedance of the coax is determined by this and thus the accuracy
of your instrument!
6. Re-apply the outer isolation as neatly as possible. This helps to
improve your work from step 5. Make provisions for the wires you added.
7. Put the coax between the two connectors of the original SWR casing.
NEATLY. No pigtails please; make it in a VHF fashion.
The accuray of your device is determined by the impedance of it;
the 'modified' coax and the connection to the connectors will disturb
the impedance of the unit and that should be as less as possible!
8. Hook up the two sense wires as in the original scheme: on the left,
a trimming pot on wire 1 and a diode detector on wire 2; on the
right, another diode detector on wire 1 and a trimming pot on
wire 2 (thus, cross).
The original unit probably has long wires to a PCB containing these
components in the original setup; this is no longer possible
(remember, we're talking VHF). Apply them in such a way that the
VHF 'hot' sense wires are as short as possible (a few mm's at
most). The DC wires (the output of the detectors) is, of course,
much less of a problem.
9. You probably should swap the diodes originally used in the detectors

for something better. Use low-voltage drop diodes; schottky or such. I have used OA91 diodes but they are probably not known in the USA. They are low-capacity, high-speed, low-drop detector diodes for AM video signals (at worst, you have to take them out of 2 TV sets; as an added bonus, the other components are now also available for other projects :-)

Then, wire the rest of the SWR meter as you normally do, and adjust the two puts on the sense wires.

On short, what you have done is added two sense wires to a piece of coax. That piece of coax has to remain 'coax' as much as possible, hence my emphasis on _short_ wires. The better the coax is restored to its iriginal form, the better the meter. (that is why I advised *thick* coax; the changes have less impact on the characteristics of this than on thin coax).

This, of course, doesn't make up for a bird meter. It also doesn't cost nearly as much. I used one in my student years; I only replaced it a year ago when I needed something for higher frequencies, was too lazy to build it, and got away with it because I now could afford to buy one instead :-).

This makes up for a nice weekend project. You probably ruin the first piece of coax; since only small lengths are involved, that's no problem.

Hope this helps, 73,

Geert Jan, PE1HZG

I would like to reduce multipath flutter fading on a mobile VHF FM receiver using diversity but without requiring two receivers. It seems like there might be a way to work this...

How about using two antennas feeding into the receiver with diode switching to allow rapid selection of which antenna feeds the receiver. Then use the AGC signal from the IF to determine when to switch antennas. When the AGC indicates a drop out is happening or the signal is below some set threshold, switch to the other antenna. The maximum switching rate would probably have to be limited (under 100 Hz?) to limit switching when the signal drops out from both antennas and reduce modulation of the receive signal.

While this wouldn't be as good as dual receiver diversity where you could always select the best signal, I would think it would help reduce deep fading and it would be cheap too since you don't have to have two receivers. Does anyone do anything like this?

Why not ?

Most controllers today have several layers of control. It is easy to give
the users of the club enough "control" to have fun with out giving away
the farm. Control is only being able to turn on and off the transmitter.
All the rest of it is user functions.

If the young hams can't play....they will build their own system. I have
seen several repeaters here in the san francisco bay area built and
controlled by teen-agers. Come to think of it...I don't think they let the
old farts control their repeaters ;)

Wouldn't take much to rig a straight key on the dash for this situation. Or ou could get one of those musical horns and program it for 'CQ CQ CQ DX.' OR maybe just use an old memory keyer. Sounds like fun!

A teacher friend as once sitting in as a replacement for a sick colleague and halfway through the lesson, realised that a kid at the back was tapping out various dubious words in CW. Poor kid was *most* surprised to be summoned to the front of the class for a telling off! I can sympathise because I wouldn't have expected any of my teachers to have understood CW, although now I know quite a few teachers who have passed the UK morse test.

>I've sometimes been tempted to honk out "CQ" when I see a car with "ham"
>license plates... Anybody ever done this?
>
A local radio club used to hire a coach which one of the club members (who had a UK PSV driving licence) would drive to various shows around the country. They would put a big banner in the back window with the club name on it. One enterprising amateur overtaking did send a CQ on his horn, and probably had the fright of his life when the driver answered him in CW on the coach horn.

1116. 4X1RU REJECT LIST

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 07:03:14 UTC
From: RHAREL@FAB8.INTel.COM
Message-ID: <9308250703.utk27441@FAB8.intel.com>
Source record: 277442

I undeerstood that Jim, 4X1RU (and other BBS's - SV1ML (?)) were rejecting
messages for several reasons.
One, stations were sending bullitens to ALL @WW or ALL @EU in languages
other than English. Don't get me wrong, I have nothing against bullitens
that are not in English but they have no place on networks where the
majority or the readers understand only English as a first or second
language. I could also understand a case where a BBS in the U.S. would
reject bullitens written only in Spanish and distributed to ALL.
Many people do speak Spanish in the U.S. but most people do not and to
distribute it to ALL is just not fair. On the other hand, if Miami, FL. has
a large Spanish speaking ham community and a bulliten goes out to that
area, I see nothing wrong with this.
4X1RU also is rejecting stations who dump software on the network.
On long haul HF packet networks at 300 baud, imagine how long it takes to
pass a 300K binary file !
I think Jim should let people know what his rules are so as many Europeans
who use his services know where they stand.
73,
Rich
WB2JBS

1117. How does your key feel?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 07:43:58 UTC
From: jangus@skyld.tele.com
Message-ID: <746264638snx@skyld.tele.com>
Source record: 277446

Since ordering Pizza via an autopatch via a handheld on an airplane that is being powered by leadacid batteries left overnight on concrete has already been discussed in this group, I thought I would start something a little bit different.

I actually do work CW. I own several hand keys (all cheap or odd, but not the mega-buck whizbang ones you see advertised in the magazines.)

[23 minute break here while I work kb6ila, Joe in Corpus Christi, TX]
(shameless plug for a college student that was calling CQ in the background)

Some are vertically polarised (straight keys) and some are various forms of horizontal polarization. The horizontal ones are all by the Vibroplex company.

So anyways, here's the big question. How do you rate your key? How do you rate the key you aren't using and why?

Here's a couple for example:

J-38 type straight key. Solid Reliable. I use this for under 10 WPM contacts. The one I have has the flat connector slot in the front for the bug plug. (Note: If you know the origins of this key, give yourself a geezer point!)

Nye straight key. Got rid of it 10 minutes after buying it at swap meet. It had the same feel as stepping on a lawn sausage barefooted. Could'nt tell when it made or broke contact unless listening to side tone. Even then it felt sloppy. (Note: The Nye key uses leaf switch type contacts with no solid mechanical stops for the contact.)

Vibroplex Bug. A gift. Still works after 23 years. Yes, I have the heavy weight on it.
Vibroplex Semi-electric. This is the cutdown bug with just the contacts, but a single bug style handle. Just like the bug, di-di-di-di-di-di-di-dahhhhhhhh.

Vibroplex Iambic. Solid. Built like the other Vibroplex products. Capable of withstanding my fist.

Bencher. No doubt a smooth key, but not rugged enough. I got half way though my callsign and shot the springs off behind my friends HF rig when I was testing it to see what they were like.

Now.... I know some of you are using $200 straight keys, and $400 paddles. What exactly is it that you like about your key? I've heard it all already about stiffness, mass, spring inertia etcetera. We're talking about approxi-mately 1-3 ounces of material on 2-3 inches of arm moving from 1/64 to 1/16 of an inch total travel. Just how different do they feel? This is not the same as trying to send CW by sliding the kitchen window up and down.

Mind you, I'm not going to rag on anyone for using something other than what I'm using. I am really curious as to what and why you chose what you are using.

Thanks. 73 es GE from Jeff.

P.S. I will total things up and after the things settle back down, I'll try to post a rational tabulation of what and why.

OK, 4X1RU rejects data.

I've had the same experience. I forwarded a (dutch) bulletin to a fellow
HAM. I obtained a mail from 4X1RU stating that my message was incredibly
long..... ca. 30K
grin

I mailed him back why he didn't forward my message anyway and that I'll
take care in the future. Haven't heard from him since.
Between the lines of his mail you could read that he wasn't that happy
with messages he was not able to read.

Why then set up a node? I didn't choose to use his gateway! Can I help it?

BTW (zap), I couldn't uncompress your .Z file. I get the error:
not in compressed format :(

No doubt I'll be on that list too.

The Lagan Valley Amateur Radio Society will be taking part in a "Gala Day and Dance" on 11th September at Lanford Lodge airfield (beside Lough Neagh, Northern Ireland) for the 50th anniversary of RAFA.

We intend to run our HF station at the event and members of the public will be able to enter our shack and listen to or perhaps take part in QSO's with overseas stations. Since many attendees will have a connection with wartime activities at Langford Lodge we would like to arrange skeds with anyone from the USA who has any connection with Langford Lodge, and in particular anyone who was stationed there during WWII.

If you, or anyone you know, would like to take part in our transatlantic link-up, then please get in touch with me and we will arrange a sked.

The event take place 1200-2400 BST (= UTC+1) on Saturday September 11th, but LVARS will be in attendance from Friday evening to Sunday morning.

Different countries, different regulations -- but in the USA, most node operators wouldn't be happy passing messages they couldn't read since the node operators here could get fined or shut down if such messages were commercial or vulgar.

That usually means English-only, since most of us speak no second language. I can read simple Spanish (which is rapidly becoming a *de facto* second language here), but I wouldn't recognize most vulgarities. (The situation *is* changing slightly though -- now only the first node to pass a message is responsible for its content.)

Is the situation in Europe similar? If so, that would explain 4X1RU's reluctance to forward stuff he can't read.

> another new callsign. i am going to sit on this application until
> he sends me his copy of this new tech+ license."
> is this correct or am i missing something obvious?

no, that sounds right - in fact, if things go as planned, the next trip around should let the VEC consolidate the other pending applications into a single transaction for the FCC (so you would miss the intermediate steps in licenses for the 2nd pass).

< obvequery: reading the fcc rule book (rtfm!), i gather that any
< organization can enter into a contract with the fcc to be a vec,
< and accredit ve's. so, how does one become a w5fy (?) ve? how
< do arrl and w5fy ve's differ?

W5YI has a bigger CSCE form. Some differences in how the VE team does the paperwork/creates tests. Basically, you just contact w5yi and ask for an application. Same with ARRL (believe the info is on the info server at ARRL).

OK, perhaps it is not wise to send bulletins in langauages other than English to ALL@WW. But there could be some reasons to do so. In another posting, Martin Heffels, PE1EEC, gave his arguments why he thought it would be reasonable to post something in German. Hence I think it should be at the responsibility of every radio amateur to decide in which language he wants to post a message.

We all are aware that many people won't be able to understand those messages, but how can someone decide on his own initiative that we all have to write in English when we want to send something around the world?

Isn't this a kind of censorship? I understand the argument that especially the intercontinental connections are slow and thus should only be used carefully. But if you argue that for this reason non-English messages should not be promoted then it would be logical also to look inside the message and to decide upon the contents whether it is worth to promote it...

: 4X1RU also is rejecting stations who dump software on the network.
: On long haul HF packet networks at 300 baud, imagine how long it takes to
: pass a 300K binary file !

Yes, you are completely right with your remark. But what is the alternative? Of course, we could also always send disks around the world. This, on the other hand, is not worth the effort, if you want to post just a small program. So I suggest to use a threshold up to which it should be possible to distribute software.

I am on the reject list of Jim, 4X1RU, too. As far as I can remember, I made my way to this list, because I sent duplicated messages. Indeed, I did so and I still think that it was very reasonable. I posted the executables for a program once for the atari and once for X86-machines (ok, now I know that the promotion of software is stopped anyway by 4X1RU). Together with these postings, I also posted a README note twice, once in the ATARI-column and once in the IBM column. Of course they were the same because they described the same program! I posted them twice, since no-one can expect that IBM readers look into the ATARI column and vice versa.

Therefore, duplicated messages can also be senseful! A threshold mechanism could be helpful here, too.

: I think Jim should let people know what his rules are so as many Europeans
: who use his services know where they stand.

Yes, once again, you're right! In addition, he should occasionally clean up his reject list. I took a look at this list - and I have the impression that I found there about 50% of all radio amateurs in Germany who are active in packet radio...

I remember reading about how one ham was driving along and got stuck behind another car going much slower. Noticing the ham radio license plates on the car in front of him he honked out QSY, where upon the other car moved over and let him by. Not sure if he honked out TKS as he went by though. 8-)

Hello,

I am interested to know about Audio filter which are used for SSB and CW operation. I have read about them from the ARRL Handbook.

Can you tell me what the popular kind of filters are and which company makes good quality filters?

Thanks a lot for the info.

1132. Any NASA Goddard/MSFC/JSC hams on this newsgroup?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 14:36:45 UTC
From: watson@nimbus.larc.nasa.gov
Message-ID: <25ftdtINN4i7@rave.larc.nasa.gov>
Source record: 277390

The NASA Langley Amateur Radio Club is trying to make a comeback
and one of our goals is to rebroadcast space shuttle orbiter
communications. If any Goddard/MSFC/JSC/etc. ham has information
regarding doing so from a government installation please email me at:

watson@asdsun.larc.nasa.gov
(804) 864-1233

Thanks in advance.

gary@ke4zv.uucp (Gary Coffman) writes:
)not give a good null. However, polarization of the transmit antenna
)isn't an issue unless the cross polarization loss is so great that
)the signal can't be heard. Beams are only really useful if the signal
)is weak enough into the receiver to get a relative strength indication.

A horizontal signal, reflected will have vertial components that the FM
receiver will capture better. One gets all sorts of incorrect readings
that cannot be interperted. With a beam one can swing around vertical and
horizontal once each and find out the polarization of the transmitter.

)A step attenuator can help here. The doppler doesn't care if the signal
)is weak or strong, it merely measures the difference in time of arrival

It does care if the signal is weak, it will not be heard. The antenne are
NOT sensitive. One reason, losses in the PIN diodes, another, all the
transmition line mismatches.

)you're in a multipath situation while the beam does not. Doppler systems
)are great because they work well while you are mobile in motion, giving
)you a continous readout of the relative bearing of the fox.

Do not get me wrong. I have one and like it. But it takes expirence to
use it right and cannot be the only tool in use. I have found too many
ways to fool it, when I have been the fox.

Hello world!

My Atari 825 printer just died electronically. To repair it, I will need a replacement board that is fully populated with parts including the Atari custom Personality ROM (the big chip). Please advise if you have a board or know of a source. Your assistance will be appreciated.

Thanks in advance,

Hugh Wells, W6WTU

> > is this correct or am i missing something obvious?
>
> no, that sounds right

Well, not quite. The 'Tech+' is not considered an upgrade by the FCC, that is, the FCC doesn't update their database. Although the VEC gets a 610 for an update to Tech+ I don't think they send it to the FCC. Also, a new license is not issued just for upgrading to Tech+. In this case, tho, requesting a new callsign along with the Tech+ upgrade will cause the VEC to hold the paperwork for the second upgrade until the new license is issued and the VEC receives a copy of it. Luckily, new callsign requests seem to be taking a lot less time than new licenses or upgrades. This person probably would have been better off to not request the new callsign along with the Tech+ upgrade. Altho, if he was planning to upgrade past Tech right away, why not just forgo the Tech+ and go right to General or whatever?

While I think the no-code Tech is essentially a Good Idea, it seems to me that the FCC could have done a better job with it with respect to licensing, CSCE's etc.

when i posted a similar query some time ago, the few replies i got
indicated that you *might* be better off buying the narrow cw or
ssb filter made by the manufacturer... one place i was recommended
was the texas towers (800-272-3467).

i am getting a 250 hz narrow cw filter for my icom ic-735 from a
local dealer, universal shortwave.....

my .02 worth.

I have been following this thread with interest. One question that has never been answered to my satisfaction is:-

'What value should the terminating resistors for the coupling loops be?'

I have looked at various commercial designs, and also the circuits in the ARRL Handbook etc. There seems no consistency in the value of the terminating resistors! [these are the resistors at the opposite ends to the diodes on the pickup loops].

Some designs use 50 ohms, others 100 ohms [when dealing with a line impedance of 50 ohms].

Which is the correct value?? Line-impedance, or 2*line-impedance?

(I mean mathematically correct, I accept that real-world devices usually need compensating capacitors etc. because the math rarely takes the effect of lead-inductance, stray capacitance etc. into consideration).

Is my impression correct that the Jamboree-on-the-Air is a Cub Scout/Boy Scout-only activity (i.e., male-oriented only)? Or can we expect there to be Daisy/Brownie/Girl Scout troops participating as well. The reason I ask is that my nephew's Boy Scout troop is likely to be interested in participating, and so is my Novice-to-be daughter's Cadet Girl Scout troop--if there will be other YLs participating. The last thing I want to do is get the Girl Scouts on the air and have them hear -nothing- but boys (although they might create their own pileup--(-:...hmmm...).

Anyway, anyone with first hand knowledge either of the JOTA management or of GS troops participating? Wanna set up skeds?

Thanks for any info,

Yes, it is also a MARS frequency. We are a secondary user unless there is a
SAR/DR in progress, then we become primary. Also, Washington Wing is not
allowed to use the frequency because of interference with Canadian stations.

While I was installing a Genie garage door opener in my parents' house, I noticed a set of 12 switches on the opener to set the 'code' for the opener. I am just wondering wether if those switches change the carrier frequency or if they actually encode the carrier with info?

Judging from the length of the antenna, I assume the garage door opener uses frequencies somewhere on the 70cm band.

Can I use my HT to open the door? Any info is appreciated.

P.S. Now I know what a UHF HT is good for! :-)

ARRL Bulletin 72 ARLB072
>From ARRL Headquarters
Newington CT July 9, 1993
To all radio amateurs

SB QST ARL ARLB072
ARLB072 902 mHz study sought

902 mhz study sought

''Adopt no rules without further study,'' the ARRL has recommended to
the FCC, in a Commission proposal to expand the use of Automatic
Vehicle Monitoring (AVM) systems in the 902-928 MHz band.

The proposal, in PR Docket 93-61, would allow the expansion of AVM
systems through the creation of a new location and monitoring
service (LMS) in the 902-928 MHz band. Amateurs already share this
band with government radiolocation, fixed, and mobile services, in
addition to industrial, scientific, and medical (ISM) equipment and
various non-licensed, low-power ''Part 15'' devices.

The FCC said in its Notice of Proposed Rule Making that such an
expansion of AVM in this frequency range ''could lead to rapid
congestion of available spectrum'' and asked current users of the
band if they could handle any increased congestion.

''If not,'' the FCC said, ''commenters should offer potential
solutions, short of removing Part 15 users and amateur operations
from the band, restricting where such users could operate in the
band, or placing stricter limitations on the operations in this
band.''

The League said that no action should be taken until the FCC has
studied the potential for interaction between AVM and wind profiler
radar systems, the suitabliity of AVM operations for highway safety
sytems in a crowded RF environment, and the alternative technologies
available for the same purpose served by AVM and Location and
Monitoring Services.

ZCZC AG15
QST de W1AW
ARRL Bulletin 73 ARLB073
>From ARRL Headquarters
Newington CT July 9, 1993
To all radio amateurs

SB QST ARL ARLB073
ARLB073 449 mHz plan opposed

449 MHz plan opposed

The League has told the FCC that a proposal to allocate the
frequency 449 MHz for wind profiler radar systems should be based
only on careful coordination processes and site selection, to avoid
interference to amateurs, who share on a secondary basis the band
420-450 MHz with government (military) radiolocation operations.

In April the FCC issued an Notice of Proposed Rule Making (in ET
Docket 93-59) to make the allocation, and asked for comments on
whether wind profilers should also be accommodated in the 915 MHz
band or elsewhere.

The League told the FCC that the 420-450 MHz band is heavily used by
the Amateur Radio Service, especially for FM repeaters, it being the
second most popular VHF/UHF amateur allocation, with more than 5,000
repeaters.

These repeaters are used for public service communications,
especially in metropolitan areas, and are important in the
connection between Amateur Radio and the government's SKYWARN severe
weather warning system, the League said.

The League said that it appears possible that government wind
profilers could be used in this band without disrupting existing
amateur operations, but only with proper coordination, and that
non-government profilers could present even more serious
interference possibilities. More information is in QST for May
1993, page 88.

Um, surely this is mistaken?

A ham can do any doggone thing to his rig as long as he doesn't TRANSMIT outside an authorized band.

You can modify your radio to work those frequencies any time; you just can't actually work them until you have the MARS call sign.

[Not a ham, just play one on the radio.]

> Can I use my HT to open the door? Any info is appreciated.
>
> P.S. Now I know what a UHF HT is good for! :-)

I don't know about using an HT, but my Genie garage door opener used to be triggered by my operating on 20M. Really drove it nuts. I got to where I would unplug it before I fired up the HF rig. The Genie finally died (the piece that rode on the screw drive and pulled on the door stripped its threads) and I replaced it with a Sears model. Haven't noticed any problems with the Sears on any band.

1150. Re: How does your key feel?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 17:41:09 UTC
From: zardoz@ornews.intel.com
Message-ID: <25g886$fkp@ornews.intel.com>
Source record: 277471

I own two J-38's which both have had their bakelite knobs replaced with cheap plastic ones. The bakelite cracks and breaks after time and heavy brass pounding I guess. I won't use any other key probably because the J-38 is what I cut my teeth on and I once spent a lot of time pounding one. I got to where I could put out 22 wpm bursts and usually ran 18 wpm but probably can't now. I think I had more time when younger because CW just seems to take so long now.
I've tried the Navy keys with double knobs, Nye keys the same, other stuff, doesn't feel right. I also own an old Lionel J-36 bug that I took all the parts off and put on the other side cause I'm left-handed. Its got an extra weight that I stole off a chrome lightnin' bug before I sold it.
It works okay but the J-38 just feels better.
Paddles = keyboard to me and I won't ever use em.

What Russell was referring to is that DEALERS (for the most part) will not provide the information needed to open up the transmit range without seeing a copy of your CAP or MARS license.

1152. Re: Open Garage door with my HT?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 18:17:45 UTC
From: spf@cbnewsl.cb.att.com
Message-ID: <CCButM.A5F@cbnewsl.cb.att.com>
Source record: 277420

From article <25g2pj$sfp@vixen.cso.uiuc.edu>, by jtg0707@uxa.cso.uiuc.edu (Jui Tien):
> While I was installing a Genie garage door opener in my parents' house,
> I noticed a set of 12 switches on the opener to set the 'code' for the
> opener. I am just wondering wether if those switches change the carrier
> frequency or if they actually encode the carrier with info?

Some kids on bikes once (20 yrs ago) opened our rescue squad garage
doors with their "toy" walkie talkies. And my VHF HT (in the public
safety 150-170 MHz band) sets off car alarms pretty reliably.

Steve

1153. VHF AMP For Sale.

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 18:37:33 UTC
From: don@fatcity.com
Message-ID: <aLPu9B2w165w@fatcity.com>

I have an RCA Corp. TacTec Power booster forsale. With abt 3 watts in it has appx. 65-70 watts out. The amp is optimized at 149.975mhz but can be tuned for peak performance. The unit runs on 12 volts and is ruggedly built. If interested, I'm asking 50 dollars + shipping. You can call me at 619-670-5821 or leave me e-mail. Thanks de Don N6NLX./

From: perry@fc.hp.com
Message-ID: <CCBwsy.2G8@fc.hp.com>
Source record: 277475

Mohan Pakkurti (mohan@tulip) wrote:
: Hello,

: I am interested to know about Audio filter which are used for SSB and CW
: operation. I have read about them from the ARRL Handbook.

: Can you tell me what the popular kind of filters are and which company makes
: good quality filters?

I built the ARRL handbook project. I have used it for both CW and SSB.
It does exactly what it's supposed to do.

I don't use it anymore because audio filters won't get rid of
adjacent-frequency heavyweights like an IF filter does. The end effect
is that the desired signal gets blanked during Mr 10KW's peaks because
of IF overload. An audio filter is like closing the gate after the
horse has escaped.

If you're going to buy, I'd suggest spending the money on an IF filter.

1160. Re: How does your key feel?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 20:00:58 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CCBzLn.Myp@news.Hawaii.Edu>
Source record: 277378

Jeff,
I've been using a straight key which I found in someone's trash can;
don't know the brand name (it says Japan on the bottom - never heard of
that company before), it's got ball bearings at the pivot points (are those
really necessary?), and it also has this cheap bronze finish on it that's
flaking off.
I ONLY work CW and my xmtrs are all homebuilt QRP rigs, so I guess this
key has the same personality as my xmtrs (my philosophy concerning ham
radio is to do it as cheaply as possible, not buying what I can build
or scrounge).
I like my key but I have nothing to compare it to. Oh, I do have an
old bug (not Vibroplex) from the 30's but don't use it.
I used to be a CW operator for the Coast Guard - the keys we had were
quite old - they were a `no-name' variety.
Gee, does the type of key really matter? I could send code with just two
pieces of crossed wire - just switch hands periodically when one gets tired.
Oh, my straight key has a shorting switch on it - that's good to have
in case my ham shack ever get flooded and starts to sink - just
close the switch so the rescue ships can DF my QTH while I take to the
liferaft...

CHARTER

rec.radio.scanner is a newsgroup for discussion about "utility" traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio and broadcast satellite-related material doesn't belong to rec.radio.scanner because they have their own newsgroups. This newsgroup replaces alt.radio.scanner. In addition, the rec.radio.scanner will be gatewayed to a mailing list which will be created as soon as possible after newsgroup creation, as there are many who do not have access to USENET news.

rec.radio.scanner vote Final Vote Ack

I still use the "Brass Pounder" key I bought from Lafayette Radio back in the mid-60's. I like the feel, since the spring is a bit lighter than all of the other keys I have tried. For a keyer paddle, I use a Bencher; nicely made, but it does seem kind of fragile.

1164. Re: IC728 vs. IC735 anyone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-25 21:18:45 UTC
From: FSNYDER@mwvm.mitre.org
Message-ID: <1993Aug25.211845.14689@linus.mitre.org>
Source record: 277394

Well, I have an IC-728 and I've used IC-735's on field day & in my opinion, you won't go far wrong with either. From my look at the pictorials, the IC-728 seems to be an IC-725 with pass-band tuning added and (reportedly) a quieter synthesizer. Even the low power limit pot (used to set it up for QRP) has the same number. It has more memories than the IC-735 which might be worth it if you do a lot of "band surfing." Unlike the IC-735, it does not have an ALC meter, which you might want if you plan to work a lot of SSB. I believe the IC-735 also has a built-in keyer, but may be wrong on this. Both put out an honest 100 watts, so power is not a discriminator. I work mostly CW and some QRP and love my IC-728. I'm equally certain I'd love an IC-735.

To me, choosing between the two is a win-win situation. Enjoy your dilemma!

I am wondering if there is anyone who is anyone who has 3 or more cophase KLM KT34XA's
If so:
What spacing are you using?
What height is your highest antenna?
What rotators are you using?
Hows the SWR per band?
Thanks for the information in advance. I hope to be trying it out for myself real soon.

Kris-

I saw much of this equipment demonstrated at the Orlando Hamfest, last March. It is actually test equipment with legitimate uses in servicing various types of two-way radios, including cellular phones.

The problem is, as you have pointed out, that they are advertising their products to appeal to customers who might have other uses. I agree that QST is the wrong place to place such ads.

These ads must be designed to appeal to real customers. I can imagine that groups needing to expand their communications expertise, would read the ham magazines, since trade publications don't usually appear on the news stands. Although my first thoughts were that these might be clandestine groups that were into drugs, et cetera, they could also be security officers of U. S. industrial facilities, trying to improve their ability to defend against industrial espionage. They might be from small, poor countries, trying to defend against sophisticated people who are into drugs.

So, it is hard to make a judgement about the motives of Optoelectronics and their customers.

From: oo7@emx.cc.utexas.edu
Message-ID: <25gr16INN7sn@emx.cc.utexas.edu>
Source record: 277389

jeffj@cbnewsm.cb.att.com (jeffrey.n.jones) says:

(Subject: Re: A strange thing that happens when you are learning code)

>>I remember reading about how one ham was driving along and got stuck
>>behind another car going much slower. Noticing the ham radio license
>>plates on the car in front of him he honked out QSY, where upon the other
>>car moved over and let him by. Not sure if he honked out TKS as he went
>>by though. 8-)

I would recommend against this.. The majority of hams would not recognize
the CW (sad but true) and would simply think you were giving them a hard time,
slam on the brakes or make a Certain Gesture (or worse, in Texas, where only
wimps are not armed to the teeth). The most I have ever done to acknowledge
a ham on the road is a "dit dit", and then only if it's someone I know.

But the above story does sound like one of those cutesy pieces in QST
where a knowledge of CW is the only thing that saves someone's life, along
with Democracy in the Western World.

I've seen one of those videos that is supposed to be an ad for how great
ham radio is, where everyone has a 10-element monobander and amps, shot in
California, and the opening shot is of a guy driving up to his house and
sending "CQ" on the car horn. I bet the neighbors get tired of this *fast*.

Message-ID: <1993Aug26.001614.14194@en.ecn.purdue.edu>
Source record: 277395

I am currently using a HamKey paddle. I fell in love with a friends and just had to have one. It is the only paddle that 'fits' the way I send. My friend said he liked it because it gave him the same feel as his bug. Since I have never used a bug I wouldn't be able to compare. Contacts are very solid. Another friend has put some HamKeys on a heavier base to accomadate a strong fist.

I started out using a straight key, but Carpel Tunnel insisted I try something else. I then got ahold of a Heathkit HD1410(?) Electornic Keyer. That was fine for awhile, but it was awful 'mushy'. I was off the air for awhile and went I got back on using the Heathkit I had a very difficult time sending clean code. Action was just too soft.

I don't care for Benchers. Somtimes in the heat of a contest I need bang out something and the adrenilin gets the better of a bencher. The last contest I ran at someone elses QTH the only handkey was a bencher. I soon learned how to switch CT to keyboard send!!

My attempts at learning The Code on the computer have been thwarted,
so I am considering learning by listening to cassette tapes in the
car.

I have seen some tapes in ham and electronics stores and catalogs.
Still others advertised in flyers that appeared in the mail.

What/which tapes are the best for learning Morse Code? How good
are they for learning The Code?

1176. Re: Open Garage door with my HT?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-26 01:07:08 UTC
From: jones@San-Jose.ate.slb.com
Message-ID: <25h2bs$mns@k2.San-Jose.ate.slb.com>
Source record: 277397

Jui Tien (jtg0707@uxa.cso.uiuc.edu) wrote:
: While I was installing a Genie garage door opener in my parents' house,
: I noticed a set of 12 switches on the opener to set the 'code' for the
: opener. I am just wondering wether if those switches change the carrier
: frequency or if they actually encode the carrier with info?

: Judging from the length of the antenna, I assume the garage door opener
: uses frequencies somewhere on the 70cm band.

: Can I use my HT to open the door? Any info is appreciated.

: P.S. Now I know what a UHF HT is good for! :-)

These are "Part 15" devices. I believe that most of them actually use
either the CB band (11M), or the 40-something MHz band (just like cordless
phones and baby monitors). Maybe someone has better knowledge on this.

Anyway, yes, I believe that most garage door openers actually do encode
the 12 or so bits on the carrier. There are single chips available that
can do this these days (aren't Aplication Specific IC's wonderful?).

So I don't think you'll be able to trigger it with your HT. However,
I _do_ know from experience something that _can_ be triggered by a 2M
HT (if it's close enough): those "passive infrared" motion sensing lights.
If you can sneak up on it (probably from behind) and hold your HT next
to it and push the button, the light will trigger. Even more interesting
is that if you happen to be transmitting when the light times out, it will
trigger again when you _STOP_ transmitting. This is the only case I've
ever heard of that _NOT_ transmitting interfered with something!

By the way, if you use 5W and an end-fed half-wave antenna, you can be
a few feet away and see the effect. (I discovered it one night when
having a QSO on my back patio.)

Oh, yes, this only works if it is dark enough for the light to go on.

Thanks for all of the responses to my original post. I think I'm just going to save my $$$$ and buy a new 2m HT. The student ham radio club (Cyclone ARC) here at Iowa State has a 2GAT, which I am quite impressed with. My only beef with it is that it has no jack to connect to 13.8vdc, but that can be worked around easily :-). It's amazing what can be done with a battery extension cable.

I've been fortunate that a friend of mine has lent me his HTX-202, also a fine radio, and a heck of a lot cheaper that the 2GAT. I can't decide whether I want the more rugged, but also more expensive, 2GAT, or the HTX-202, which is somewhat less solidly-built that the 2GAT, but is less expensive. I think I'm beginning to discover what makes hams blow their minds. :):):):)

> So anyways, here's the big question. How do you rate your key? How do you
> rate the key you aren't using and why?

My key was purchased purely for decorative purposes since I never ever work CW. Period. All my HAM friends said my station wouldn't be complete without it. It is made out of oak and brass with mahogany paddles. And it looks simply marvelous just sitting there. Luckily, that's what I bought it for.

At work, I have a straight key I got for $0.50 at the swap meet. It functions as a paperweight and also serves to tease my friends who have not been able to pass the code test and upgrade yet. Note; this is just a key, no radio or practice oscillator. This key is also fufilling its purpose admirably and at a much lower price.

Diane, KD6AAA (upgraded to Advanced, but kept the spiffy callsign)

SB QST ARL ARLB091
ARLB091 FCC fines WA4D

FCC fines WA4D

Michael E. Whatley, WA4D, has been hit with an FCC Notice of Monetary Forfeiture for 2,000 dollar(s). The Commission denied a request from Whatley that it reconsider the Notice of Apparent Liability it issued to him in November, 1992.

Whatley was accused of willful and malicious interference based on FCC monitoring on 7257 and 7258 kHz in late 1992. According to the FCC, Whatley asked the FCC's Field Operations Bureau for copies of recordings of the transmissions in question and also requested a 30 day extension of time in which to respond to the NAL.

The FOB said it granted Whatley the extension and provided him with both the tape and a transcript of it.

Whatley then argued that other amateur operators were interfering with his transmissions, that the transcripts are incomplete (not reflecting all communications which were recorded on tape), and that the parties to other communications on the band ignored his attempt to ''compromise.''

On August 20 the FCC announced the monetary forfeiture order, the FOB saying ''We have reviewed the record and affirm our initial findings.''

The FCC said it was not persuaded by Whatley's arguments, and ''further, Mr. Whatley's actions and communications indicate hostility towards the net members on 7255 kHz that were communicating, and do not support his claim that he intended to be conciliatory.''

Although the base forfeiture amount for malicious interference is 7,000, dollar(s) the FCC set the fine against Whatley at 2,000 dollar(s) because he is an individual and has no record of prior violations.

Whatley has 30 days to pay the fine.

ARLB092 Restructuring denied

Restructuring denied

The FCC has denied a petition by Scott Leyshon, WA2EQF, to eliminate written examinations for amateur operator licenses. At the same time the Commission denied a petition by Vincent Biancomano, WB2EZG, which, although it did not advocate a ''no written test'' license, did, the FCC said, concur in all other respects with Leyshon's proposal.

Leyshon's petition, filed April 19, 1993, argued that current written examinations place a premium on FCC rules over technical content. No comments were received on his petition.

Biancomano's petition, like Leyshon's, was characterized by the FCC as proposing that the Commission state a goal of the amateur service as being either a technical or a non-technical service.

The FCC said that of the 170 questions that appear on examinations for amateur operator licenses, only (their word) 46 concern rules and operating procedures, while 124 concern ''contemporary technical matters.'' The Commission said it did not believe that present examinations place an unjustified premium on rules.

The FCC said that amateurs have over the years expressed the view that they agree with the current statement of the purposes of Amateur Radio, as found in the FCC Rules, and the FCC agreed.

ARLB093 FCC unveils new fines

FCC unveils new fines

The FCC has issued a new schedule of suggested base amounts for
monetary fines, with some reductions and some increases.

Fines in the Amateur Radio Service have been more numerous since a
1991 Commission policy statement which outlined standards for
assessing forfeitures. Most have been for amateur band operation by
unlicensed persons, for indecent language, and for malicious and
willful interference to other amateurs.

The FCC said that the new schedule still allows it leeway in
adjusting forfeiture amounts up or down depending on circumstances.
It also said that a ''significant change'' is to ''allow a presumption
of diminished ability to pay in certain services for individuals.''

The typical monetary forefiture assessed for amateur band violations
under the 1991 guidelines has been 2,000 dollar(s).

The National Association of Broadcasters, which challenged the 1991
fine schedule, saying it had not been subject to public comment,
noted that the new schedule is also not subject to public comment.

SB QST ARL ARLB094
ARLB094 Local, state law relief

Local, state law relief

The FCC has granted, in part, a motion by the ARRL for a declaratory ruling asking the Commission to preempt certain state statutes and local ordinances affecting transceivers used by amateurs.

The laws addressed (in PR Docket 91-36) prohibit the possession of such transceivers if they are capable of receiving on certain frequencies other than amateur bands.

The ARRL said that amateur transceivers typically allow for incidental reception of frequencies adjacent to amateur bands in order to ensure adequate performance within the amateur bands. The League also said that amateurs have special needs for out-of-band reception, a fact the marketplace long has recognized by offering transceivers to accommodate those needs.

The FCC said that state and local laws that make possession of amateur transceivers in vehicles or elsewhere illegal merely because they can receive certain frequencies, the reception of which is not precluded by federal law, are preempted by federal law. The Commission said that such local and state laws are inconsistent with the federal laws that promote and facilitate Amateur Radio.

The Commission's action was August 20 and released August 25.

Actually, I think most of the garage door openers use something in the 200MHz band, very low power.

As for triggering things with HTs, I did manage to turn someone's car alarm either on or off (not sure which annoying beep is which) in the parking lot at school while walking by and talking on 440 at about 2.5watts. If only I had a high power mobile... :-)

Well, as an owner of an HTX-202, I can tell you that I'm very pleased
with the rig - it works much better in high-RF environments than any
other rigs that I've seen close up.

As for solidity, it's managed to survive several drops onto hard
surfaces with nary a problem. :-)

I can't speak from an authoritative point of view, but from experience.
For JOTA 1991 and 1992 I hosted Cub Scouts at my house. They made contacts
with other scouts, both boys and girls. In addition, my daughter (a
brownie) made some contacts.

There is a possibilty thet the packet network in GI will be overhauled in the near future. We suffer from enormous congestion problems in 144.650, but there is little traffic on the other 2m freqs. (so far)

What I need to know is how is the packet network arranged in your area? The main problem seems to be a lack of freqs on 2m, the bandplan being:

144.625 TCP/IP
144.650 BBS and Network access
144.675 PacketCluster

The real problem is having nodes AND bbs's on 650. How does the network in your area get around this problem? Also, what type of links do you run, and at what speed?

Any suggestions gratefully received...

No, it's not! The real problem is that you want to use 2m for a packet
network. In Germany nearly all user access frequencies are on 70cm and
links are mainly on 70cm and 23 cm, some are already at 13cm.

I don't know of any links (except private provisional links) that are
on 2m.

So why on earth would you want a complete packet network on 2m?

|> [...] How does the network
|> in your area get around this problem? Also, what type of links do you run,
|> and at what speed?

Using 70cm band, of course. Most links on 9600Bd, some older ones on
1200Bd, some experimental links already on 19200Bd.

When I first became a ham in high school, I built several Heathkits
including the keyer (HD-10??). I didn't like the single paddle so I
built a "squeeze keyer" using a block of wood as the base, thin pieces
of wood as the paddles held on with rubber bands, machine screws for the
paddle side of the contacts, and another piece of metal as the common.

Of course the keyer wasn't amniosyn ... uh .... onomatop....uh...
idiosyncr ...uh... wouldn't go didahdidahdidah automatically. :^)

: Tait. They make fine rugged radios.

Hello Gary,

I am interested to know about the radios made by Motorola and other companies mentioned above. What about the HT220 and GE Mastrs. Do these work in the ham frequencies ? Where can I get info about Motorola radios and GE ones too.

Are these very expensive compared to the regular ham radios ?

In similar lines what commrecial manufacturers make equipment for HF range, and can be used by amateurs.

Thanks for the information.

>donrm@sr.hp.com

I agree the Brown Brothers is the best bar none.

I thought someone bought the patent rights to it as well as the moulds
and was going to produce it. I remember seeing at least one adv.

The problems have always been with pivots and bearings. The Brown
keys eliminated all that mess and was really quite a simple design.

When I see new designs with ball bearings that look like they belong
on a 10HP motor with price tags of over $150 I think there is a market
that some body could fill. A mechanical device with two contacts
shouldn't have to cost that much.

I have had some thoughts of home brewing one and making a magazine
article out of it. I would like to do it with common low cost parts.
So far everything I've come up with looks very ugly and I don't have
a good source of springs yet.

I used to build keyers. I would let hams help me and earn their own
keyer. I let them buy their own paddle. At that time a Brown Bros
paddle was about $35.

One young guy who had no money (High School Student) built his own
paddle. I should have bought it from him and put it in a museum.
It was built on a board, had a pencil stuck into a rubber eraser
that acted as a spring. Had tin foil contacts on the pencil for
contacts. It was terrible but it did work.

Hello,

Once in a while in this newsgroup some hams refer to J - series straight keys. Can someone tell me what these are ? I have noticed that most of the the keys are refered to as good quality ones. I want to know who makes them and how much do they cost.

Thanks for any info.

Source record: 277337

For the ham who had trouble with his TS820 w/new tubes and low output,
try replacing the driver tube also. Even though they rarely go soft,
a TS820 is pretty old and it is a good idea. I have a friend who modified
his TS820 with mil type 6146's, jacked up the plate voltage, improved the
ALC circuitry, and gets 150 watts out on 80-15 meters...about 120 out on
10 meters. 73, tom WB4IUX

> Actually, I think most of the garage door openers use something in the 200MHz
> band, very low power.

How about this one:
When I walk across my kitchen carrying a radio controlled boat (49
MHz, allegedly), the motors start to run. They also start up when I
dial my cordless phone. The phone phenomenon I understand but where's
the source of RF in the kitchen? No, the microwave is not going. Nor
is anything else that I can tell.
Anybody got any clues??

Do you use your feet to send???

The only way I can get my Bencher to derail is to hit the wrong side of the paddles, or to put up/down motion on the paddles. Neither action is going to make your CW come out right.

I can't imagine being so worked up that I couldn't use my Bencher, but could still use some other iambic paddle key. It takes some very carfully timed motions to make an iambic keyer work at all.

Something just occurred to me. Were you using an iambic Bencher, or the non-iambic Bencher? I can easily see how the non-iambic Bencher could be very delicate.

|> the /9 by hand is it acceptable? Actually, I'd rather not,
|> because it would just mess up the card, but if it is
|> necessary for some award ...
The portable is not necessary. You are not required to put it on your QSL card. In fact, as far as the FCC is concerned, you are not portable at all. You are at you home station.
|>
|> 2) I did put the county name on, but what other information
|> (beyond the standard format and my address) is helpful for
|> people trying to achieve awards?
If you do any VHF/UHF work, you should add your grid square (e.g. FN42). If you are a 10-10 member, you should put that on your card.
|>
|> 3) If I operate mobile, say in a different county and/or
|> state, what is the best way to indicate this on the QSL
|> card, so that it is clear that I didn't operate from my home
|> address?
Again, anything that makes it clear where you were. Just writing "Mobile in Middlesex County MA" seems to do just fine.
|>
|> On a related topic, I've started entering a few contests --
|> do I need to sign with the /9 in all contests, or just the
|> WPX contests?
I don't remember all of the rules off the top of my head, however, I think the general rule is you do not need to send the /9 unless there is something that would change your score. If your call were KL7UMF, you need to sign KL7UMF/W9.

You do not need to sign /9 for WPX. You may not sign /AA9 or anything else that would generate a "rare" prefix. If you sign /9, it counts as WB9. Of course, you need to use the same call for the entire contest.

>I wrote for the TS-440S's serial port will probably work.
>
>Thanks, Wayne Roth WA2N.

I just got my TS-50S running with the computer, and I must say I'm not too happy with the results. The TS-50S uses a VERY VERY limited subset of commands for RS232 communications. When you purchase the IF-10D, it includes the command set, which includes (coming from memory, so I may miss some):

FA/FB (Frequency of VFOA/VFOB)
FN (Function VFOA/VFOB/MEMCHAN)
ID (Rig ID, 13 for TS-50S)
IF (Information Display, Freq, RIT Freq, RIT on/off, MemChan,TX/RX,Mode,Function, Scan on/off, Split on/off,Tone on/off,Tone Freq)
MD (Switch Mode, USB,LSB,CW,FM,AM)
RX (Switch to Receive)
TX (Switch to Transmit)
SP (Swith Split on/off)

I was EXTREMELY irritated to find that the memories cannot be programmed from the RS-232 port! I logged onto the KENWOOD BBS and talked to the SYSOP and he said that the TS-50S was supposed to be a stripped down mobile rig and I shouldn't have expected it to have all the functions built in! At that I wasn't pleased either!

Let me know if you need any more help. I'd rather not type in all the commands if at all possilbe, but I'm pretty sure they look like the TS-440 (although limited!).

I was under the impression that in the US both girl and boy scouts fall
under the same organization.

Whereas, up here in Canada we have Girl Guides of Canada which is the
girls only group, and Boy Scouts of Canada which allows both boys and
girls.

Though there seems to be some issue about girls being in Boy Scouts
up here, recently....I guess they only started letting girls into it
recently around here (Medicine Hat). The last time I was in scouting
was 1985 or 1984, and we had girls (actually only one girl) in our group.
Of course we were one of the first groups in Calgary to be co-ed....both
of her parents were leaders in our group, and in their home country (as
it is with other countries in the world) both Scouting *WASN'T* a boy only

>

Most IR sensors "look" at a room and memorize a certain pattern of IR radiation (usually it's one dimensional, but the patters are phase sensitive and anything moving in its 'visual' field will ultimately change the pattern, setting off the device). When you transmit, the RF is probably penetrating into the sensing circuitry and changing the observed pattern, hence tripping the alarm. But while you are still holding the Tx button, the device remembers this new pattern and then settles down (light goes off). When you let go of the Tx button, the pattern changes again back to what is was before your started playing with it and triggers the alarm again.

The IR signals are very weak and use amplification right up front to get the most signal. Your transmissions are probably entering there, in it's most electronically sensitive part. If it gets to bugging you on your patio, you could wrap the sensor in aluminum foil (grounded), but don't forget to tear an opening for the IR eye! |-)

Benchers are really the low end of the totem pole.

I collect both keys and paddles. I have some made
by an outfit in Canada.. good buy.. solid brass hand made
and great.

I have a set of Schurr mini-paddles that I use mobile.. they
are solid breass and hand-made.. SUPER.. about the best I
have used for paddles (WEst German).

Recently I purchased both the Kent straight key and paddles.
Defineitly the BEST Buy around. Solid brass main parts.

The day I got my Kent paddles assembled and tested I sold
my Benchers.

1220. Re: recommendations for 2m HT's please?

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-26 22:59:04 UTC
From: ron@topaz.bds.com
Message-ID: <25jf7oINNc0m@topaz.bds.com>
Source record: 277358

Before the advent of synthesized hand-helds, HT-220's were the premier ham handheld rig. They could be made to work in both the 2m and 70cm ham bands with little effort and came in a wide variety of configurations. They are no longer made by Motorola. The current Motorola commercial stuff can be programmed for the ham bands, but most amateurs want direct keyboard frequency entry which can not be had with these radios.

Many amateur repeaters are built out of GE MASTR II stuff. Likewise this was one of the premier convert from Commercial to amateur service stuff. The Mastr is more of a marketing name than a specific radio though, and there are things from handhelds (kind of scummy ones in my opinion) to mobiles to bases.

-Ron

Lowell-

The idea of treating young people as second-class citizens, is repulsive to me.

If you treat youngsters as if they are responsible, they will respond positively. If people (adults included) are treated like "children", they will respond accordingly.

I feel it is much better to assume that a person will be responsible, and take corrective action only when necessary. Even then, guidance is the best course to take. After all, many clubs have a hard time recruiting repeater control operators, regardless of age.

I have observed that many teenage hams have totally different personalities when participating in Ham activities, than when "being themselves" at home or in school. This has to be a response to the respect they receive from other Hams. I certainly remember what it was like, getting into Ham Radio at age 14!

I suggest that having a small, older group maintaining tight control over the club, will cause the club to stagnate. Any new Hams will just be "passing through", possibly never renewing their first license. Conversely, getting youngsters involved to the greatest extent possible, will result in a vigorous, active club, that continues to grow.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
August 27 to September 5, 1993

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

!!*!*!*!*!* NOTE *!*!*!*!*!*!*

Version 2.00a of our Professional Dynamic Auroral Oval Simulator is now available. Completely rewritten, this software now produces numerous types of map projections centered on any geographical location, including OBLIQUE AZIMUTHAL EQUIDISTANT maps where radio signal paths are projected as straight lines. Precise DMSP Satellite Observations of Auroral Activity characteristics are also plottable for any hour of any day from December 1983 to 1992, making this the most extensive and contiguous database of auroral activity observations presently available. Valuable for radio communicators, aurora photographers, and astronomers. The software is now Windows 3.x compatible and will operate under either Mouse or Keyboard control. Many additional features are also included. Contact Oler@Rho.Uleth.CA, or COler@Solar.Stanford.Edu for more information or call our computer BBS at (403) 756-3008. A recorded message containing additional information is also available at: (403) 756-2386.

DEFINITIONS:

Date (day only)
10.7 cm SOLaR radio FLuX forecast
HF Propagation Conditions for LOw, MIddle, HIgh, and POlar areas (see below)
HF Short Wave Fade Probability (in %)
HF Maximum Usable Frequency in +/- percent above seasonal normals.
HF Prediction CONfidence Level (in %)
VHF Sudden Ionospheric ENHancement Probs (in %), weighted for low-mid lats
PROBability of "s"poradic E (Es) during the UT day for low, mid and high lats
VHF AUroral BacKScatteR Probs (in %) for LOw, MIddle and HIgh Latitudes
VHF Overall Global DX Potential (in %) - weighted for Low and Middle latitudes
Geomagnetic Activity Kp Index (peak value - see below)
GeoMAGnetic Activity Ap Index (peak value - see below)
AURORAl Activity for LOw, MIddle and HIgh Latitudes (see below)

HF Prop. Quality rated as: EG=Extremely Good, VG=Very Good, G=Good, F=Fair,
P=Poor, VP=Very Poor, EP=Extremely Poor.
Probability of Sporadic E (Es) for the various latitudes is given in percent.
Kp Planetary Index rated: 0=V.Quiet, 1=Quiet, 2=Unstld, 3=Active, 4=V.Active,
5=Minor Storm, 6=Major Storm, 7=Maj-Sev Storm, 8=Severe Storm, 9=V.Severe.
Ap Planetary Index rated: 0-7=Quiet, 8-16=Unstld, 17-29=Active,
30-49=Minor Storm, 50-99=Major Storm, Severe Storm >=100.
Auroral Activity rated: NV=Not Visible, LO=Low, MO=Moderate, HI=High,
VH=Very High.

```

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

Chart Start Date: Day #178

NOTES:
This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

Chart Start: Day #178

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

1223. Current FCC delays; learning your call early

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-26 23:40:09 UTC
From: depolo@eniac.seas.upenn.edu
Message-ID: <143392@netnews.upenn.edu>
Source record: 277353

I called the League last week to check up on a candidate's upgrade (we're an ARRL VE site), and they said that the combined delay between the FCC and league has been right around the 90 day mark. So, just grin and bear it, and try to avoid calling the FCC yourself. If you've waited your 90 days and still have no ticket, call the group that administered the test and let them look into it. They will call the VEC and/or the FCC to follow up on it. The more time the FCC spends on the phone, the less time they spend shuffling 610's.

If your first license is lost in the mail or for some other reason never makes it to you, the FCC will send you a special form to fill out that states that you never received your ticket even though it had been issued.

Believe it or not, the FCC will often tell you what your call is before you receive the paper in the mail, but it is still ILLEGAL to use it until you have the paper in your sweaty little hands, properly signed of course. My first ticket got lost in the mail, so I know the above from first-hand experience.

Gary Coffman (gary@ke4zv.uucp) wrote:

: Now suppose the line is *not* terminated in a resistor of the line's
: characteristic impedance. Let's first look at two extreme cases. If
: the line is *open*, then current will be zero and voltage will be
: maximum, a very high impedance point. Note that the voltage and
: current are now out of phase by 90 degrees. When the voltage collapses,

Poppycock. The instantaneous net voltage and current on a line at any
point are the vector sum of the voltage and current of a forward and
a reverse travelling wave. For each of those two, the ratio of
voltage to current is the line impedance. If you do the measurement
at a single frequency, and if the line impedance is real (no reactive
component, purely resistive), the current and voltage will be
exactly in phase. If you could _truely_ open-circuit an end of the
line so there is _zero_ current there, then you can't say the voltage
and current are 90 degrees out of phase at that point, because the
current there is at all points in time _zero_. If there's a 90 degree
phase shift between voltage and current, it's because you have put a
purely reactive load at that point, not a true open circuit. Period.

==========

: Now this would all be pretty academic if we couldn't separate
: Vf and Vr so we could measure them. Various bridge type circuits
: can be used to separate the two wave components by taking advantage
: of non-reciprocal properties of the bridge circuit. We can also
: take advantage of the properties of travelling waves in the monimatch
: to do the same thing. It's difficult to show how to build a VSWR
: meter without drawings, so I'll refer you to the instrument on
: page 27-11 of The ARRL Antenna Book for a line section that will
: work at VHF/UHF and that can be made out of ordinary copper plumbing
: fixtures.

Gary earlier in the posting noted that an SWR bridge measures VSWR or
ISWR rather than SWR. I take some issue with this. I claim that
almost all bridges that are physically a small fraction of a wavelength
make their measurement by ratioing current and voltage at a point in
the line; a true VSWR meter would measure the RMS voltage at at least
two places on the line (separated, for example, by 1/4 wavelength in
the line), but this is NOT the way these meters work. Whether the
voltage is measured with a transformer, a capacitive divider, or a
resistive divider, it's the voltage at a _single_ point in the line.
And at that same point, the current is measured, with a current
transformer, the voltage drop through a resistor, or as an inductive

pickup that's also a capacitive pickup monitoring the voltage:
that is, the parallel wire.

A forward wave will have v/i=z, where i is measured as positive if flowing toward the load; a reverse wave will have v/i=z, where i is measured as positive is flowing away from the load. The SWR meter works by expecting v-iz=0 for i measured positive toward the load; built in to the meter is an assumption about z! The meter does NOT know the z of the line you are measuring, so if you use a 50 ohm meter on a 75 ohm matched line, it will tell you incorrectly that the line has an SWR greater than 1:1.

If you want more math details of how the meter works, I could be talked into providing them.

Boy, those harmonics from the compressor motor in the fridge are
really out of hand, aren't they :-) But seriously, where do you
keep your cordless phone?

There's a network directory on the ARRL bulletin board. I don't know if it has been placed in an ftp site. If you can't find it and no-one reports seeing it somewhere, let me know and I see if I can get it to you. I've already downloaded it.

1229. Mod MTX-120 for 2m use

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-27 08:08:21 UTC
From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.93Aug27080821@rinhp750.gmr.com>
Source record: 277364

I have a chance to pick up a Radio Shack MTX-120 marine band handheld transciever (recently discountinued) --cheap--. It will, however, require some work. I believe it has a cracked pcb.

It's not worth a whole lot to me as a marine band radio, but if there is some -easy- way to convert it to 2m, then it might be worth the effort. It has thumbwheel tuning for selection of 54 frequencies plus another 9 frequencies for reception of NOAA broadcasts. I'm not a boater, so I don't know, but apparently there are two sets of frequencies, one set for USA and another for international use. It appears that the radio has the ability to select another 54 "international" frequencies.

Challenges:
o Fix the original problem
o Lower frequency range from 156.25-157.425 to 2m band
o Add the ability to offset Transmit frequency for repeater use

Questions:
o Has anyone on the net done this before? How?
o Are there other challenges I haven't considered?
o Is a broken MTX-120 worth ~$60 to someone out there?
(If you are interested in buying the radio then please reply via E-mail. There is no technical content in such an offer and I believe it would be of no interest to the rest of the net.)

My sincerest congratulations and heartfelt thanks to the ARRL on getting the preemption on these $%^^#$@ scanner laws. I know two people who were arrested here in New Jersey and spent small fortunes in court (with amateur community help, but never mind) beating these raps. I hope we can put this ridiculous chapter behind us soon.

Bob

Hello,

I am looking for a source of a CD-ROM that contains the international
part of the Callbook and is not from Buckmaster. The disadvantage of the
Buckmaster's disc is the strange format that makes non-interactive use
of the data unpossible. Or is there already a solution?
If you can give me a hint or a source of such a CDROM I thank you in advance.
73!

towards Amateurs was never really an issue because I have never
considered purchasing any "real" radio gear there.
<deleted account of RS employee really blowing an opportunity>

I do not speak for Radio Shack as a whole, nor do I speak for
RS #01-6358 in Center Line, MI though I work there part-time.

This kind of stuff comes up every now and then. Someone gets poor
service at a Radio Shack store and extrapolates that to the whole
company. While I'm not excusing the poor treatment Bob received,
I'd like to point out that it is not the company policy to treat
people that way.

The problem stems from a really basic principal of retail sales.
That is: Folks want to spend as little as possible for the things
they buy and are willing to shop elsewhere if the price is just a
couple percent lower. In order to exist as a profit making company,
RS (as well as a LOT of other retailers) has to pay low wages. The
low wage jobs attract certain kinds of workers. While the company
tries hard to weed out and/or retrain the poorer workers, they are
not 100% successful.

Rather than lose you as a customer Bob, I'm sure the store manager
would like to speak with you. If not the store manager, then the
district manager. As I said, it's not company policy to treat people
poorly. Though I ought to add... It's against company policy to
promote your radio club. If you can show the store manager how it
will result in significant sales then I'm pretty sure the store manager
wouldn't mind bending the rules a little. But the onus is on you to
show him why it would be in his best interest.

Regarding the companies "attitude toward Amateurs", I really doubt that
there is any attitude one way or the other. Remember: Radio Shack is
in the electronics merchandising business. The only reason that there
is any amateur radio equipment in the stores is because the powers on
high believe they can turn a profit by selling them. It's basic
free market merchandising. Ie: Find a product that the people want
and sell it for a price that provides for a profit margin.

Wake up Radio Shack.

Radio Shack already has a pretty good idea of what it takes to be a successful merchant. Some of the sales persons have yet to embrace that idea.

Hey! Howzabout this idea? Why not infiltrate their ranks and influence them from inside? (Only slightly tongue-in-cheek)

Hi, tks for reading.

I have a TS-430 with CW filters and FM mod. When it's first turned on (lately) in CW or AM the S-meter goes full scale, the background noise goes to full mute. Switching to USB or LSB things return to normal. FM is not affected. After it's been on for 10-15 minutes, the CW and AM are back to normal. Any hints what's causing this?

From: levine@mc.com
Message-ID: <25l1na$c74@jericho.mc.com>
Source record: 277369

There have been a lot of postings about how rotten the service is at Radio Shack lately, although I always thought it was a convenient place to pick up odds and ends. Radio Shack's attitude towards Amateurs was never really an issue because I have never considered purchasing any "real" radio gear there.

Their attitude towards Amateurs REALLY shone through yesterday when I went into the Radio Shack in Marlboro, MA. yesterday. I am the liason for the local ARRL VE team. I asked if I could leave some flyers promoting the next VE Session. The sales clerk looked a bit puzzled unitl I pointed out to him that if locals get their license, they might be inclined to come in and purchase their Ham gear. The clerk then understood and said OK. He then added that they would probably buy it whether or not they had a Ham license.

My reply was "I hope not since they really need a license to transmit with it". (yes, I know you dont need a license to listen - but I knew what he really was implying) and told me he "doesn't HAVE to" let me leave them. He turned his back on me and walked away.

Nice attitude Radio Shack. I will never patronize this store again although it is less than a mile from my house.

Radio Shack are you listening - Hams get licenses by attending Volunteer Exam Sessions. After they get licenses they buy radios. If they learn about Ham Radio from you they MIGHT come back for gear.

Wake up Radio Shack.

1238. Re: JOTA: not for everyone?

The Jamboree on the Air has always been an informal operation. Anyone is welcome to participate in it. There have been many Girl Scout grups on the air the past few years. Many amateurs not involved in Scouting in any way have made contacts with JOTA stations as well. It is mainly an opportunity for young people to talk with each other and experience the world of ham radio first hand. There has never been a restriction on who participates. It is an excellent program.

Dates are always the 3rd weekend of October, 0000Z Saturday to 2400Z Sunday. This year it is October 16-17. Some of the freqs are 28.365, 21.360, 14.290, 7290, and I am not sure about the 80m freq. Conversations are up and down the band from those points. All Amateurs are encouraged to open their shack to Scout groups for this event. Your local Scout Office can give you names of leaders. Girl Scout offices may not be aware of this program, but many of their units do participate.

Clark,

So far as I know, we're down to only -one- surplus store: DEBCO Electronics, on Edwards Road in the Hyde Park/Oakley/Norwood neighboorhood area. Coston's and Lapirow Brothers are both looong gone.

If you'd like directions to DEBCO (near-northeast part of town), let me know...they're near enough to I-71 exits to be easy to find.

Source record: 277377
Cross-posted to: rec.radio.shortwave,rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.homebrew

After helping my sister clean out my mother's basement, I came across a remnant of my past, an old KnightKit R-100A Receiver. After cleaning it out, and wiping 20+ years of dust off it, it *SURPRISINGLY* still runs! Unfortunately, it is out of alignment and the manual for it is probably in the same place all my unmatched socks are. So, if anybody out there has a manual for a KnightKit R-100A circa 1968 and would be willing to copy the alignment procedures and/or the schematics, I'd be willing to pop for the copy fee and postage. I figure if the INTERNET doesn't have it, nobody does.

Thanks for the effort. Either repost or e-mail is fine.

> So anyways, here's the big question. How do you rate your key? How do you
> rate the key you aren't using and why?

My key was purchased purely for decorative purposes since I never ever
work CW. Period. All my HAM friends said my station wouldn't be complete
without it. It is made out of oak and brass with mahogany paddles. And
it looks simply marvelous just sitting there. Luckily, that's what I
bought it for.

At work, I have a straight key I got for $0.50 at the swap meet. It
functions as a paperweight and also serves to tease my friends who have
not been able to pass the code test and upgrade yet. Note; this is just
a key, no radio or practice oscillator. This key is also fufilling its
purpose admirably and at a much lower price.

Diane, KD6AAA (upgraded to Advanced, but kept the spiffy callsign)

>is anything else that I can tell.
> Anybody got any clues??

Sure there is RF in your kitchen. The microwave's controller is spewing out junk all the time, so is your phone answering machine, fancy coffee maker, bread machine, baby monitor... Many cordless phones send digital codes from the base unit to the handheld while in the cradle (for security codes).

There is no end to RF sources that will screw up cheap radio control cars and boats.

The problem with the boat could be cured if the manufacturers would just use national semi's cheap little RC control chip set. But instead, they use a dumb two tone FM control system (using discrete components). If the signal is modulated with a tone that is above a threshold frequency, the car goes right, below it goes left...

^^^^^^^ ^^^^ ^^^^^ ^^^^

I usually don't flame people but, I just couldn't let this go by.
And YES, I am also an ARRL VE.

Wake up and smell the roses Val. The original post was very clear.

Bob Levine said: "I am the liason for the local ARRL VE team. I asked
if I could leave some flyers promoting the next VE Session."

Club? What club? There is no radio club!

Well folks, Jack's got me there. He caught me red handed. I falsely
accused Bob of representing a radio club. I am guilty. I apologize
for any embarrassment I have unwittingly caused, though I fail to see
why I should be flamed for it.

It's still against company policy to promote it. However, the store
manager may be inclined to bend that rule if he can show increased
sales due to it. (The policy actually says that only RS merchandise
and promotional material can be displayed. Nothing against Bob's
exam sessions or the local charity drive.... it's just not stuff
received from Ft. Worth. The managers have some leeway but it
really helps them if they can show THEIR manager how it helps their
store increase sales.

Jack, I don't know what this "I'm a VE" stuff has to do with anything.
Customers and sales clerks are persons and ought to be treated with
respect regardless of what ever credentials they carry. For what it
matters, I'm a VE too. And a director in a radio club. And the club

newsletter editor. And the clubs ARRL liasion. And an Extra class operator... So? So what? I still haven't elmered anyone, I still haven't got 5BWAS or DXCC, I haven't even got an antenna named after me. But then again, I've only been licensed for a bit over two years.

>will result in significant sales then I'm pretty sure the store manager
>wouldn't mind bending the rules a little. But the onus is on you to
>show him why it would be in his best interest.
^^^^ ^^^^^^^^
Bob Levine also said:

"The sales clerk looked a bit puzzled until I pointed out to him that if locals get their license, they might be inclined to come in and purchase their Ham gear."

That seems very clear to me. Maybe I missed something. It seems to me that Val Breault - N8OEF - vbreault@gmr.com really stepped in it this time.

As far as I can tell, Bob spoke with a "sales clerk", not with the store manager. The sales clerks have no authority to change anything. It seems that "lockhart@mothra.nts.uci.edu (Jack C. Lockhart)" may have missed that point.

I have said all I am willing to say about the matter. I enjoy discussions and look forward to them but I take no joy in reading flame wars and even less in their infantile persuit....

I'm embarrassed that I even wrote this much.

>poorly. Though I ought to add... It's against company policy to
>promote your radio club. If you can show the store manager how it
^^^^^^^ ^^^^ ^^^^^ ^^^^

I usually don't flame people but, I just couldn't let this go by.
And YES, I am also an ARRL VE.

Wake up and smell the roses Val. The original post was very clear.

Bob Levine said: "I am the liason for the local ARRL VE team. I asked
if I could leave some flyers promoting the next VE Session."

Club? What club? There is no radio club!

>will result in significant sales then I'm pretty sure the store manager
>wouldn't mind bending the rules a little. But the onus is on you to
>show him why it would be in his best interest.
^^^^ ^^^^^^^^
Bob Levine also said:

"The sales clerk looked a bit puzzled until I pointed out to him
that if locals get their license, they might be inclined to come
in and purchase their Ham gear."

That seems very clear to me. Maybe I missed something. It seems to
me that Val Breault - N8OEF - vbreault@gmr.com really stepped in it
this time.

>N5UPH

The only communications port on the FT-530 is the microphone jack.
Maybe those clever Japanese have put a secret RS-232 port in there
somewhere that I haven't seen yet. What solder jumer do I remove to
get to it!

1248. Original Brown Bros.

I agree, I own a Brown Bros. Mach. Co. model CTL and wouldn't consider
anything else. it's heavy enough for stability, the pivot design makes
for good tactil feed back even at very close contact spacing, it's
fully adjustable but not critical, and it's full iambic.

>Benchers are really the low end of the totem pole.

The only Brown Bros. keys worth owning were the ORIGINAL DESIGN
from the late 60's early 70's. Another company turned up in the
later 70's early 80's making 'Brown Bros.' keys. These weren't
the same design. (paddle pivot point at the far end of the shaft
instead of the center. Contacts too close to the paddles.)
I suspect that most of the people who dislike the Brown Bros.
paddles had experience with the newer (poorer) design.

The Legal Limit

3-500Z tubes: Eimacs, 2 brand new in the box for $110 each, and
one used, full-output (also Eimac) for $89
Dentron Clipperton-L Linear Amplifier, 2KW PEP SSB, 1KW PEP CW,
tuned input, uses 4-572B tubes, ALC, factory-installed 10
meter mod for full 160 - 10 meter operation, Peter Dahl
power transformer installed for continuous duty cycle, a few
scratches on the case but front panel is immaculate, with
original manual and dealer receipts for mods: $409

For Antique Modulators Only

Collins 212B-2 "Broadcast Speech Input Console," 1955, 7
inputs with cue and program for 2 studios and the console.
3 components include rack mount power supply, rack mount relay
deck and the console itself. Quoth the manual: "The Collins Type
212B-2 equipment is designed primarily for the smaller station
where operational facilities are not so complex." In very good
unmodified condition, some wear marks at lever switches. Impressive
piece of gear. Console shipping weight is 110 pounds. $1099

Top Quality Boatanchors
*Everything in this section is in excellent or better condition, most
with original factory manuals.

Johnson Ranger I, 1954 AM/CW Transmitter, fine: $225
Johnson Viking Valiant II, 1961 AM/CW transmitter, fabulous: $330
National NC-183 (this is the one with the metal tubes, not a
"D" model) GC receiver, exceptionally clean, works great,
original manual: $275
Collins 75A4 receiver, about as clean as they come: $625
Hallicrafters SX101 receiver, excellent: $140

Good Used Ham Gear

Kenwood SM-220 monitor 'scope w/BS-8 panadapter. Near-mint
looking and working. With manual. Will not separate. $315
Drake R4 receiver, 160-10 meter ham bands, no WARC bands, works
fine, front panel is near-mint, case top has 3 scratches. No
manual. $139.
Kenwood S-599 speaker, matches R599/T599 twins, excellent
condition, extremely rare. $59
Heathkit Maurauder transmitter, 80-10 meters, 90 watts out,
classic two-tone green, massive AM/CW/SSB/FSK rig. Built-in
power supply. Super nice looking and working. $109

National NC-77X GC receiver, clean original blue paint with
built-in speaker, .54-31mhz. SWL bandspread, CWO. $49
Millen Absorption Wavemeter. 1950-vintage pre-grid-dip technology.
4 tuning coils with direct-reading dials in original wooden
case. Fine condition. $39

Satisfaction guaranteed or your money back. Call Don at 412-234-8819 (days)
or 412-344-0956 (7PM-10PM EST).

I assume that the port to which the original post referred was the one which is used by the remote control speaker-mike offered by Yaesu. I too would be very interested in knowing how one might access this (i.e. so that one could write a computer control program for the rig), including both the electrical hookup (I guess that they are using a stereo-style mike plug, with the data on the ring connection (since the others are used by the older speaker-mikes with which the unit is also compatible), but I have no idea what sort of signal level is used and such) and the actual logical interface (what do you send to the thing to make it do <insert desired functionality>?).

If anybody out there has any ideas about how this thing works, could you please post them? Email would be great too, and I can summarize any email here if there is any interest.

1252. W9GR DSP KIT ??

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-27 18:40:12 UTC
From: depaul@spk.hp.com
Message-ID: <CCFL70.4tr@spk.hp.com>
Source record: 277280

Hello.

I've got the W9GR DSP kit. It helps with the noise and hetrodynes, but is much too noisy to use for the cw filtering, ESPECIALLY the 30 Hz filter.

If you have the kit, could you please explain, in lay terms, how to make the kit much less noisy. The noise, I guess, is the sampling noise I hear. It is almost as loud as the signal itself...And, yes I'm tuning in the signal where it is loudest, and am driving the volume to the kit at the prescribed amount.

Also, do you know of a way to change the 750 Hz (#9) to either 700 Hz or 800 Hz??

Thanks in advance,

Marc DePaul
depaul@hpspksf.spk.hp.com

(By the way the noise is slightly stronger (vs the signal) with the cans on.)

1253. Re: JOTA: not for everyone?

Newsgroup: rec.radio.amateur.misc

From: jmiller@prowler.afit.af.mil
Message-ID: <JMILLER.93Aug27143554@prowler.afit.af.mil>
Source record: 277289

In article <25g1iu$ao3@ucunix.san.uc.edu> morris@ucunix.san.uc.edu (Ted Morris) writes:

Is my impression correct that the Jamboree-on-the-Air is a Cub Scout/Boy Scout-only activity (i.e., male-oriented only)? Or can we expect there to be Daisy/Brownie/Girl Scout troops participating as well. The reason I ask is that my nephew's Boy Scout troop is likely to be interested in participating, and so is my Novice-to-be daughter's Cadet Girl Scout troop--if there will be other YLs participating. The last thing I want to do is get the Girl Scouts on the air and have them hear -nothing- but boys (although they might create their own pileup--(-:...hmmm...).

Anyway, anyone with first hand knowledge either of the JOTA management or of GS troops participating? Wanna set up skeds?

In 1991, the JOTA weekend coincided with the Brownie Father-Daughter camp at GS Camp Paumalu, Oahu (North Shore -- quite scenic, BTW, and they welcome mainland Girl Scouts for summer camp -- but I digress), Hawaii. Since my daughter (uh, first harmonic) and I had waited for two years to go to this, I decided it would be fun to take the rig along and see what I could do. I tossed the trusty ol' TS-140, a Hy-Gain tape dipole, my station battery, some coax, and a antenna tuner (what? you say -- it's my only working SWR bridge) into the car and set up shop Saturday night after the flag ceremony. I managed to work FO6JAM (French Polynesia) and a couple of VK JOTA stations; unfortunately, the girls weren't terribly impressed. They wanted to talk to people on the mainland -- however, at 0730Z, most of the mainland is asleep. Tried again Sunday after the closing flag ceremony, but it seemed all the JOTA stations had closed down by then :-(. At least we made a couple of contacts...

By all means, get the Cadettes on the air -- they're certainly the right age to be bit by the ham bug.

73,

Jeff

Message-ID: <9308271549.aa12497@FSAC3.PICA.ARMY.MIL>
Source record: 277283

Yes youu can send and receive at the same time on the same frequency

at the same location. How is it done??? Output of the transmitter

is injected into the receiver input at a controlled amplitute and

phase to cancell the interference coming down the receiver antenna

line. It ain't cheap but it's for the military....money is no object.

Clark Fishman WA2UNN cfishman@pica.army.mil

1257. Algonquin Amateur Radio Club

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-27 20:00:26 UTC
From: levine@mc.com
Message-ID: <25lp4q$i22@jericho.mc.com>

Do you read 73 Magazine? Did you wonder what Wayne Green was referring to on page 76 of the September issue where he discusses the Algonquin Amateur Radio Club and the "outrageous conduct" of K1ZFH?

I would be happy to send you the information by private reply mail. Let me know!

73 Bob

Tom Bruhns (tomb@lsid.hp.com) (That's me) wrote:
: Gary Coffman (gary@ke4zv.uucp) wrote:

(a couple paragraphs from my earlier posting deleted...)

: : Now this would all be pretty academic if we couldn't separate
: : Vf and Vr so we could measure them. Various bridge type circuits
: : can be used to separate the two wave components by taking advantage
: : of non-reciprocal properties of the bridge circuit. We can also
: : take advantage of the properties of travelling waves in the monimatch
: : to do the same thing. It's difficult to show how to build a VSWR
: : meter without drawings, so I'll refer you to the instrument on
: : page 27-11 of The ARRL Antenna Book for a line section that will
: : work at VHF/UHF and that can be made out of ordinary copper plumbing
: : fixtures.

: Gary earlier in the posting noted that an SWR bridge measures VSWR or
: ISWR rather than SWR. I take some issue with this. I claim that
: almost all bridges that are physically a small fraction of a wavelength
: make their measurement by ratioing current and voltage at a point in
: the line; a true VSWR meter would measure the RMS voltage at at least
: two places on the line (separated, for example, by 1/4 wavelength in
: the line), but this is NOT the way these meters work. Whether the
: voltage is measured with a transformer, a capacitive divider, or a
: resistive divider, it's the voltage at a _single_ point in the line.
: And at that same point, the current is measured, with a current
: transformer, the voltage drop through a resistor, or as an inductive
: pickup that's also a capacitive pickup monitoring the voltage:
: that is, the parallel wire.

: A forward wave will have v/i=z, where i is measured as positive if
: flowing toward the load; a reverse wave will have v/i=z, where i is
: measured as positive is flowing away from the load. The SWR meter
: works by expecting v-iz=0 for i measured positive toward the load;
: built in to the meter is an assumption about z! The meter does NOT
: know the z of the line you are measuring, so if you use a 50 ohm
: meter on a 75 ohm matched line, it will tell you incorrectly that
: the line has an SWR greater than 1:1.

NOTE that a true VSWR meter, one that works by actually measuring the
RMS voltage at some distinct points along the line and NOT measuring the
current at all, will get the right SWR answer independent of line
impedance (assuming it's designed properly...). That is, if you
really measure the SWR as (Vrms.max / Vrms.min), where the max and
min are found by "sliding a voltmeter along the line" as it were,

then the measurement is independent of line impedance. However, this is !!_NOT_!! the way any of the common SWR bridges work.

mohan-

I don't know what others are talking about for sure, but I would assume they were referring to the U.S. military keys that flooded the surplus market, after World War II. The models J-37 and J-38 come to mind. I have one of the old J-38's, purchased from a surplus dealer, back in the mid-50's.

In today's world, a "knock off" key is sold as a J-38. The thing that indicates it isn't one of the old surplus keys, is the presence of a ball-bearing mount for the arm. The key is actually a fairly nice one, so that may be the one people refer to. My only concern, is the potential for resistance and intermittent contact through the ball-bearing mount.

: Can I use my HT to open the door? Any info is appreciated.

Jo> These are "Part 15" devices. I believe that most of them actually use
Jo> either the CB band (11M), or the 40-something MHz band (just like
Jo> cordless phones and baby monitors). Maybe someone has better knowledge
Jo> on this.

The first GDO's used the Remote Control channels in the 11 meter band, which is why overload from CB's used to open/close the door. Some of the first toy 100mw walkie-talkies were CB channel 10 and could do the job at close proximity if you whistled or screamed the proper tone combo. Now you could imagine what happened when a model plane or boat operator just happened to key in the right sequence of tones that opened or closed somebody's GD on the same channel or how many model planes did unexpected manuvers when somebody on the same channel tried to open their garage door. Migration to UHF was forced by the CB boom in the 70's.

Jo> Anyway, yes, I believe that most garage door openers actually do
Jo> encode the 12 or so bits on the carrier. There are single chips
Jo> available that can do this these days (aren't Aplication Specific IC's
Jo> wonderful?).

A few years ago, someone on GEnie, (the online service, not the GDO), took a counter and measured a few of the most popular GDO's frequencies. He came up with an operating range between 285 and 330 Mhz. Even with the PCM signal, it is possable for a 2M HT's 2nd harmonic to do it, but it would be just plain luck without the actual measurements of frequency and code. As far as I can tell, car alarm remotes also run on this band.

The measurement was done as a reality check. During Operation Desert Storm some people were complaining that their GD's were opening and/or closing everytime a military transport plane flew over. This prompted a bunch of jokes about doing morse code practice by slamming GD's open and closed and having QSO's by connecting the remote units to beverage antennas, (usually loaded by beer cans). It turns out that this band of frequencies are used for the location transponders of military aircraft, the GDO's and alarm remotes being secondary users.

A few weeks ago, I passed the test for Technician No-Code, and the examiners sent my application off to FCC Land, where it's currently in a holding pattern.

So, while waiting for my license, I'm looking at radios and such.

Where's a good place to start to find out about what's going on? 2-meter, naturally, for voice and packet. What about 70cm? 23cm?

Currently I'm thinking along the lines of a dual band 2m/70cm handheld that receives outside the ham bands, and a TNC for packet.

What about baud rates? 1200 baud sounds horribly slow to me since I have v.32bis on my computer, but the few people I've talked to say 1200 baud is The Standard for packet. What's the modulation for digital? It wouldn't happen to be the same as for phone modems, would it? Could I use my regular modem for a TNC?

What are good handhelds for limited bucks, and which ones should I stay away from? (I've seen a number of flames at Kenwood.)

Is there a list of acronyms somewhere? (It took me a while to figure out what an "HT" was.)

(Maybe I'll have my license by Christmas...)

But this does raise a question - how do the new FCC rules apply where the originator and first relay are not under FCC jurisdiction? Do 'illegal content' messages that originate outside the U.S. get a 'free ride' through the U.S. packet system? Or(more likely) is the 'first relay' *under FCC jurisdiction* held responsible? The latter would seem to militate against PBBSs with international links relaying messages which are in a language not understood by the sysop.

1266. rsgb gb2rs news 29th august 1993

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-28 06:28:11 UTC
From: ted@tedb.demon.co.uk
Message-ID: <746519291snz@tedb.demon.co.uk>
Source record: 276789
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur,rec.radio.info

Good morning. It's Sunday the 29th of August and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- Historic radio equipment is on show on Portsmouth; advice for anyone worried about a missing licence reminder; and there's lighthouses galore to work this weekend.

An exhibition of wireless telegraphy and radio equipment covering the last hundred years is on board HMS Warrior this weekend. HMS Warrior is part of Portsmouth's historic dockyard and the radio exhibition is on show until tomorrow, Bank Holiday Monday, afternoon. many of the exhibits come from private collections, including that of past RSGB President Len Newnham, G6NZ. The Fareham and District Amateur Radio Club will be running a special event station throughout the event.

Members have asked the Society what they should do if they have not received a reminder from Subscription Services Ltd that their licence fee is due. If your licence is about to expire and you have not received a reminder, the recommended course of action is to send payment together with details of your name, address, callsign and licence expiry date to SSL, PO Box 885, Bristol, BS99 5LF. The Radiocommunications Agency has announced that in future licence renewal reminders will be sent out by SSL six weeks in advance, instead of four. However, if this and a final reminder are ignored the licence will be cancelled and pass slips for the RAE and Morse Test (where appropriate) will have to be produced to support the application for reinstatement.

The September edition of Radio Communication, which was posted to all RSGB members last week, contains a list of vacancies for the Society's Council. Members' attention is drawn to this, and to the procedure for nominating someone for one of these vacancies which was published in the August edition of RadCom.

Autumn sees the start of many courses for the Radio Amateurs Examination. Details of RAE courses, as well as Morse classes, have been published in the July, August and September editions of Radio Communication. In addition, we have been notified of an RAE course in Newbury, Berkshire. For details contact Ray, G3NDS on 0672 870892. Information on Novice courses in your area can be obtained by sending a stamped self-addressed envelope to Sylvia Manco, RSGB, Lambda House, Cranborne Road, Potters Bar, Herts EN6 3JE.

This weekend eleven amateur radio stations will be operational from lighthouses in Scotland and on the Isle of Man. Operating from the Scottish mainland GB2LA is the most westerly, GB2LB the most easterly, GB2LD the most northerly and GB2LG the most southerly. Other Scottish stations include: GB2LH on the Isle of Lewis in the Outer Hebrides, GB2LK from Kelso, GB2LL on Lismore

Island at the entrance to the Great Glen, GB2LM in the Shetland Islands and GB2LO in the Orkney Islands. GB2LT will operate from the Lighthouse at Turnberry Golf Course. Members of the Isle Of Man Amateur Radio Society will be on air from the Point of Ayre Lighthouse, at the Northern tip of the Isle of Man, using the call GT3FLH. An award is available to UK amateurs who work or hear seven out of the eleven stations. For further information about the awards and for other details contact Mike, GM4SUC, QTHR or telephone 0292 443127.

The launch of the Ariane spacecraft, carrying three new amateur satellites, has been postponed until the 24th of September due to a rocket malfunction. The satellites are ITAMSAT from Italy, KITSAT-2 from Korea and AMRAD from the USA.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO. From North Cook Islands, N7NKG will sign ZK1XR until next Saturday the 4th of September on SSB and CW. PA3FAC will be active again as 9M8ACP from Borneo until the end of September. An African tour by OZ1EYE will continue with his next locations being to Zambia and Guinea-Bissau. From St Paul Island, near Newfoundland, CY9R is scheduled to operate during the first week of September. Belgian stations are using the prefix OO until the end of September to celebrate the accession of their new king. V85XF is the call to be used by G3TXF in Brunei from the 4th to the 11th of September. His priorities will be WARC and LF bands, CW only. Operating frequencies include 18073 and 24893kHz.

Rally news now and we have been notified of four rallies for today, Sunday the 29th of August:

Coleraine and District Amateur Radio Group Radio Rally is being held at The Lodge Hotel, Coleraine. This features a display of latest amateur equipment, home computer technology and a limited indoor flea market. Refreshments will be available and there is talk-in on channel S22.

Galashiels and District Amateur Radio Society Open Day is at the Focus Centre, Livingston Place, Galashiels. Doors open at 11.00am. The event features the usual trade stands, a bring & buy stall and club stalls. Refreshments are available.

Gloucester Radio Rally Car Boot Sale is at Naas Lane, Quedgley, Gloucester. Follow the signposts from the M5 motorway junction 11 and 12.

Stroud Radio Club are running a bring and buy stall. There is talk-in on channel S22. The Torbay Mobile Rally is being held at the Audley Park School, Barton Road, Torquay. This is a change of venue from that originally advertised. Doors open 10.00am and there are trade stands, a bring and buy stall and refreshments.

We know of one rally taking place tomorrow, Monday the 30th:

The Huntingdonshire Amateur Radio Society Fifth Annual Bank Holiday Rally will be at St Germain Street, Huntingdon, Cambridgeshire. This is a new venue which can be found by heading for the town centre, then going round the one-way

system until you see the site on your right. Trading commences at 10.00am. Attractions include trade stands, a bring & buy stall and many car boot pitches. Refreshments will be available. All pitches and parking are on hardstanding. Talk-in will be on channel S22, or via the repeater GB3OV on 433.125MHz, channel RB5. Contact David, G7DIU on 0480 431333 for further information.

We have news of four events taking place next Sunday, the 5th of September:

The Bristol Radio Rally, incorporating the Bristol Computer and Electronics Fair, will be at the Brunel Centre, Temple Meads, Station, Bristol. Doors open at 10.30 am, but disabled visitors can gain access 15 minutes earlier. The event boasts more than forty trade stands, two bring-and-buy stalls - one for equipment under 25, refreshments and ample under-cover parking. Talk-in will be available on channel S22, 145.55MHz. Further information can be obtained by calling G4YZR on 0275 834282.

The Milton Keynes and District Amateur Radio Society has its seventh Annual Radio Boot Sale next Sunday at Cranfield Airfield in Bedfordshire. The airfield can be reached via Junctions 13 or 14 of the M1. Details from Ray, G1LRU, on 0908 660798.

Also on the 5th is the Telford Amateur Radio Rally at the Telford Exhibition Centre. Doors open at 10.30 am. There will be trade stands and a flea market. Talk-in will be on channel S22, 145.55MHz, and the UHF repeater GB3TF on channel RB8, 433.200MHz. Disabled visitors are asked to contact the organisers if they require a parking permit. Further details are available from G7BWQ on 0952 770922. He should also be contacted by anyone who wishes to take an RSGB Morse Test at the rally.

And the Vange Amateur Radio Society Rally will be at the Laindon Community Centre, a short walk from Laindon railway station. Doors will open at 10.30 am and the rally includes traders, a bring and buy stall, refreshments and a free raffle. Talk in will be on channel S22 and approach roads will be signposted. Further information can be obtained from Mike, G4NVT on 0268 543025.

The Bishop Auckland Rally, which was scheduled for the 31st of October is now to be on the following Sunday, the 7th of November. Further details from Mike, G0PRQ, on 0388 766264

Contest news next:

The RSGB SSB Field Day Contest takes place next weekend, the 4th and 5th of September on the HF bands. Full details can be found in the July edition of RadCom. Another RSGB event is a Slow CW Cumulative Contest on Monday the 6th of September. This is the first of five sessions to be held between September the 6th and October the 8th, from 1900 - 2030GMT on 3.540 - 3.580MHz. July RadCom has the power output categories and exchange details. On the VHF bands, the first 144MHz CW Cumulative Contest is next Tuesday the 31st of August from 2030 to 2300 local time. This is the first of five sessions, the last being on the 1st of November. There are only two sections: Single operator Fixed or Portable, and Listeners. For further details of these events see February RadCom page 67.

Special events stations operational this week include:

GB0BCH which will be aired by the Manchester and District Amateur Radio Society from Halcombe Brook near Bury. Operation will be for the full 72 hours over this Bank Holiday weekend. The event is in aid of the Boothhall Childrens Hospital Charity. If you hear the station on air, please give it a call as it is on sponsorship per contact. GB2CPS is on the air by courtesy of Grafton Radio Society at Chigwell Police Show next weekend, the 4th and 5th.

And now the solar factual data:

The period from the 16th to the 22nd of August has seen a major magnetic storm followed by a slow recovery to more normal conditions. The cause of the disturbance is at present not known, but there was a sudden burst of X-Ray flux. No flares were reported during the period. Sunspot counts have been very low and meaned at only 38. The solar flux levels have not changed much and averaged 92 over the period. The geomagnetic levels have been up to major storm levels. The sudden storm commencement, or SSC, began on the 15th at 1514 and reached an Ap index of 64 units on the 16th. This is about K7 - the highest level since last September. By the 19th, there was a slow decline to quiet, with levels of only 6 units by the 22nd. The period averaged 22.8 units. The state has been 'major mag storm in progress' up to the 19th, then 'nil, nothing to report'. The radio quality indices collapsed on the 16th to very poor, with the Boulder Fort Collins and New York circuits being almost useless. Levels recovered to normal by the 21st. The aa indices, as supplied by the British Geological Survey for the 10th to the 16th of August, were quiet up to the mag storm on the 15th, with the 14th having a daily index of only 5.5 nanoTeslas. However the storm raised levels to 115 nanoTeslas during the evening of the 16th, giving a daily index of 88.9 nanoTeslas. The period averaged a daily index of 22.6 nanoTeslas. Despite an expectation that the more active side of the sun would come into view, the X-Ray flux declined every day, apart from a burst to B1.4 on the 16th. It was down to only A6.7 units by the 22nd, with the period averaging A8.9 units. Since January when this data was first given on GB2RS, the average levels have dropped considerably, by about 50 times. It is not possible to say how normal this is for this part of the cycle, but it seems a big reduction.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the 16th and 17th, are not available. This often happens with major magnetic storms which disrupt the ionosonde, making readings extremely difficult. However we have data for the 18th to the 22nd. Levels rose reaching 8.8MHz on the 21st and averaged 7.9MHz. The peak times are now around 19.00 to 20.00 hours. The darkness hour lows have not varied much and averaged 3.3MHz, with the minimum levels being now around 03.00 hours. Blanketing E and Spread F has been reported some days.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg were seriously affected by the mag storm with some readings unobtainable, possibly due to severe absorption. The highs averaged about 6.6MHz and the lows about 3.8MHz. Proton

events have been measured by satellites since 1966 covering cycles 20, 21, and the present cycle 22. Cycle 19 has inferred data obtained by other means. The pattern is very clear, proton events are increasing at an alarming rate; they have doubled since cycle 20, and far exceed those of cycle 19 which was reckoned to be the biggest cycle so far recorded. Many of these events are also now being recorded as ground level events.

And lastly the solar forecast:

This week, the active side of the sun will be rotating away. Solar flux levels are expected to be at about the 90s. Geomagnetic activity is expected to be unsettled at first due to coronal holes, but becoming quieter as the week proceeds. Ionospheric levels and the radio quality indices are expected to be below normal at first but rising to normal or just above normal later in the week.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 U B and G7 R B series, and Novice calls in the 2 0 A G and 2 1 C F series.

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th of each month. This article is posted on the 14th, 21st, and 28th of
every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews
------------------
If you are familiar enough with NetNews to look through previous articles on
your system, Option #1 above may be the easiest for you. The FAQ is posted
so that it should not expire from your site's news spool until the next one is
posted. Unfortunately, some news administrators do not honor the expiration
dates meant to preserve the FAQ.
```

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org

Yesterday, I contacted 9G1XA in Ghana; I would like to exchange QSL's and I understood him to say to send the card to his home QTH which I thought was K0EY. However, I can't find K0EY in the callbook (servers).

Can someone help me with the QSL address for 9G1XA?

Thanks, in advance, for your assistance!

John

I've been to Quement (aka The Bascom Bandit, The Big Q) in San Jose. They sell all kinds of electronic gizmos and accessories as well as Amateur radio gear. They do a very good job of advertising the local VE sessions as well as having a bulletin board where hams can advertise on 3x5 cards. HRO in Sunnyvale does too, but it is more understated (the board is in a far corner of the building). I do think that businesses that sell products that require a licence to use have a moral responsibility to educate a potential customer that a licence is required to operate the item. I have not purchased a new car lately, so I don't know if they ask if the customer has a licence.

I think the big panic over unlicenced operators started when RS brought out its 2m HT. Because of the very high visibility and popularity of RS, hams, rightly so, became concerned about unlicenced ops. I began to see signs at Quement and HRO saying you have to have a licence to use or try out the radio gear. RS does this in their ads in 5-point type at the bottom of the page. It's not an unfounded fear. On one occasion an unlicenced ham was chatting on a local repeater, asking a bunch of questions that would have been obvious to anyone who has even READ the question pool, muich less passed the test. Luckily, the control operator informed him that one needs a licence to transmit and the QRM went away.

This is off-subject so I'll keep it brief. When I moved to Florida, I looked into how to get a Fla. driver's licence. It turns out, you cant get a D/L unless you own a car, i.e., you have a car registered in your name in Fla. But you can't get your car registered unless you have a Fla. D/L. Hmm.. What they do is bend the latter rule so you can register your car and then get a licence. In Calif., I believe, you don't even have to own a car to get a D/L.

Steve

I have built and have used the W9GR kit for the last month or so. I have
only used it on SSB, mostly 17 and 20 meters. I am delighted with its
performance and think it is a bargain at the price.

Revision: 1.4 06/30/93 12:04:14
Changes: new rec.radio.amateur.* newsgroups, cs.utexas.edu gateway

(Note: The following is reprinted with the permission of the author.
Due to the recent reorganization, it is also on a temporarily-
accelerated posting schedule as follows:

July weekly
August bi-weekly
September back to monthly)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 30 June 1993 to
add the groups created during the latest reorganization vote and the
description of the cs.utexas.edu gateway.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
```

arrangement, but one was that the system was not supposed to be used for commercial purposes. Since one of hams' favorite pastimes is swapping gear, it was natural for hams to post messages about equipment for sale to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use restriction, and after some argument, a group was created specifically for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, has not been removed as of this writing, but it is obsolete, and you should use .digital.misc instead. The group has the .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. The neverending no-code debate goes here, as does the New Jersey scanner law, the legality of ordering a pizza on the autopatch, what a bunch of rotten no-goodniks the local frequency coordinating body is, and so on.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

The rec.radio.amateur.misc, .packet, and .policy groups, and the rec.radio.info group, are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server. The rec.radio.swap group is not available for reading by electronic mail. At this writing, the most recently added groups are also not available for reading by electronic mail, although that may change.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

From what I have heard from the local DX group. The manager for 9G1XA is K0EU.

I would love to work him. Good luck and good DX!

BID: $ANS-240.01

Phase-3D Engineering Model Construction Update

Dick Jansson (WD4FAB), AMSAT-NA Vice President for Engineering, reports that teams from AMSAT-DL and AMSAT-NA are well along in their efforts to construct an Engineering Model of the Phase-3D spaceframe in Germany. During the past two months, AMSAT-DL President Dr. Karl Meinzer (DJ4ZC) along with Werner Haas (DJ5KQ), Konrad Mueller (DG7FDQ), Wilfried Gladish and workers Diana Cronau, Birget Rheil and Anuschka Geis joined forces with Dick and a team of Weber State University (WSU) students to tackle the project at the University of Marburg. The WSU team was led by Ralph Butler and Jaim Parsons. They and their students had also been constructing tooling templates as well as machining various structural parts for the proposed Model. Dick indicates that while some structural parts still remain to be completed on the Model, all the essential structural elements are now in place.

"It was a tremendous effort," Dick noted upon his return to the United States last Monday. He went on to say that, "We've now confirmed that our structural designs can be successfully manufactured into a lightweight flight spaceframe."

During the Marburg effort, the team also took delivery of flight hardware for the Phase-3D electronic module cases. These cases are constructed in kit form and contain fully interchangable parts that will allow assembly of any one of five different versions of the design. The cases will ultimately house the vital electronic components of the Phase-3D satellite. All of the module case work was done by WSU students.

In the course of the Model's construction, Dick reports the team racked up some rather impressive statistics. Together, they drilled over 9,900 holes and performed over 19,000 deburring (finishing) operations on the structure. The Equipment Panels, alone, had over 3,200 holes drilled in them. The high point of the project came when the internal Heat Pipes (a part of the Phase-3D thermal balancing structure) were successfully mated with the surfaces of the interior Equipment Panels -- on the very first try! Dick likened this feat to someone "bowling six 300 games in a row". He confirmed that such success was a direct result of the professional approach employed by each member of the team.

Construction of the Engineering Model spaceframe marks a major milestone in the Phase-3D development effort. It provides designers of the "all important" electronic, propulsion and attitude control systems with a "hands on" platform to test the "fit-and-form" of their designs, many of which are also now nearing completion. It also gives the WSU students a massive "template" for building the actual flight model spaceframe, a task that's now scheduled to begin in earnest starting this September at WSU.

[The AMSAT News Service (ANS) would like to thank Dick Jansson (WD4FAB) and Keith Baker (KB1SF) for this bulletin item.]

AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 240.02 FROM AMSAT HQ
SILVER SPRING, MD AUGUST 28, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-240.02

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz

Date UTC Mode Phs NCS Alt NCS

11-Sep-93 0730 B 159 VE2LVC W9ODI
18-Sep-93 1515 B 96 N7NQM W5IU
2-Oct-93 1400 B 160 WA5ZIB WJ9F

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 240.03 FROM AMSAT HQ
SILVER SPRING, MD AUGUST 28, 1993
TO ALL RADIO AMATEURS BT

BID: $ANS-240.03

Weekly OSCAR Status Reports: 28-AUG-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Aug 16-Oct 25
Mode-B : MA 0 to MA 60 !
Mode-BS : MA 60 to MA 120 !<- after Aug 30 (hopefully)
Mode-S : MA 120 to MA 145 !<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 !<- S beacon only
Mode-BS : MA 150 to MA 180 ! Alon/Alat 180/0
Mode-B : MA 180 to MA 256 !
Omnis : MA 230 to MA 40 ! Move to attitude 210/0, 25-Oct-93
Continuous up-to-date information about AO-13 operations is always available on the beacons at 145.812 MHz and 2400.646 MHz in CW, RTTY and 400 bps PSK. Also, these bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, etc., and can also be found in many international newsletters. [G3RUH/DB2OS/VK5AGR]

MIR: LW2DTZ reports that the new callsigns for the MIR space station are R0MIR and R0MIR-1 for Personal Message System (PMS). LW2DTZ also says that the packet station appears to be working correctly and the downlink frequency being used is 145.550 MHz FM (simplex). LW2DTZ says that he has not heard any voice operations but the packet operation is working well around the world. He further adds that anybody can work MIR with 10 watts into a omni-directional antenna, e.g., a J-Pole. The signals are very strong as soon as MIR comes over the horizon. [LW2DTZ]

RS-10: WC9C reports that the RS-10 transponder is working just fine, with evening passes still being the best but on the day-time passes during the weekends, there is alot of activity! On or about 18-AUG-93 the CW Robot stopped calling CQ, but the CW transponder is still on. WC9C worked P40P and XE1KK last week. He notes that good downlink signals are possible with as little as 3-5 watts are common. Also, RS-10 is very good bird to work mobile. In another status report from KB0J, he notes that he worked OX3KX right at the end of a RS-10 pass last week. OX3KX was on a downlink frequency of 29.388 MHz, and he was booming in at 57 while K0BJ was very near LOS on the VHF uplink, and just barely getting into RS-10. And finally, KL7JAF wants to let all RS-10 users to be aware that "ALASKA IS ALIVE AND WELL ON RS-10 BUT THAT ON MOST PASSES WE HAVE IT ALL TO OURSELVES EVEN THOUGH THERE IS A WINDOW TO THE LOWER 48 AND THE VE'S. ACTIVE OF LATE ON RS-10 IS KL7ILA, K0MVL/KL7 AND KL7JAF. IF YOU HAVE A PASS THAT INCLUDES US, STAY ON FREQ UNTIL LOS AND WE WILL BE LOOKING FOR YOU..."
[WC9C & K0BJ & KL7JAF]

RS-12: G3IOR reports that the sudden drop of magnetic activity and Maximum Usable Frequency (MUF) rise of 19-22 August has brought about some remarkable "sub-horizon" propagation on RS-12, Mode-K. GM4IHJ and G3IOR have been copying excellent signals from both RS-10's and RS-12's 29.407 and 29.357 MHz beacons, respectively, when the satellites have been over Antarctica, southern South America and South Africa, over VE8, KL7 and UA0. Much of the time the 29 MHz path has been in common with the RS-12 21.210 -

21.250 MHz uplink path, so stations have been worked when the satellite is well below the user horizons by as much as -50 degrees elevation! Good QSO's by G3IOR included K4ZC (NC), VE2GSX, LU2NI and PJ2MI. Many other stations were copied coming in on the RS-12 downlink who were oblivious to this fact, as they were working terrestrial F2 DX within the RS-12 uplink passband. Also, RK3KPK has reactivated the RS-12 ROBOT. It is noticeable that the ROBOT requires requires a near perfect 1:3 Dot:Dash ratio time for it to respond to callers. While it is at high angles of elevation or along dark paths, it responds well. When in high MUF conditions, particularly at low elevation angles or sub-horizon it is almost impossible to get response although ones signal actuates the downlink. This is thought to be due to the multi-path changing the Dot:Dash ratio from 1:3 to 1+n:3+n, in other words, difficult to read by the ROBOT. By adding weighting to the key to give more abrupt dots, e.g. clipping them, QSO's may be made. This, together with studies of the erratic Doppler variations during multipath sub-horizon passes might be used as an excellent ionispheric research tool by keen observers. A message to all RS-12 operators. Do not wait for predicted AOS to start your operations, nor give up at the predicted LOS. Look for the beacon or the ROBOT as much as 35 minutes prior to a "pass" and stay with it once the satellite has officially gone "LOS." You will often hear the satellite well outside the normal tracking times, and the chances are that you will get into the transponder too. By this way you may work some surprising DX not normally available on the low orbiting bird. CW activity (best) is centered on 21.215/29.415 MHz and SSB on 21.225/29.425 MHz. Be sure to call "CQ RS-12" to differentiate from F2 QSO makers working direct in the passband. [G3IOR @GB7VLS]

WO-18: Webersat (WO-18) is operating normally. Transmitter output power has been boosted about a watt. [KB7KCL]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

1280. Headphone recommendations.

Hello,

When I bought my HF rig the ham who sold it to me gave me a pair of
headphones with it. I have been using them when listening on the band.

After using it for sometime I get a very painful feeling in my ears. It really
hurts. Because of this I have been looking for a pair of headphones.

So, Can someone here tell me some info about how to choose a good headphone.
Information on names of companies and model numbers will be extremely useful
for me to decide. And also please let me know how much one should expect to
spend to get a good pair.

Thanks.

>
>I am looking for a source of a CD-ROM that contains the international
>part of the Callbook

Arn't we all. Problem is, there are possibly over one hundred licencing authorities out there. Someone has to gather all their data and then make it all ASCII if it isn't already and then put it on a CD ROM.

My bitch about the Buckmaster "DX" book is that it is old, out of date, and inaccurate. Plus, for decades they have not been putting no-code calls in.

But it seems that even Buckmaster has trouble hunting down the lists of amateurs round the world. I think they reley on inviduals sending them lists - they don't write to various PT&Ts (licencing authorities) and buy them.

I know this because when I was playing OZ9IY (No code and NEVER in a Buckmaster book), there was much corespondance in the Danish ham mag OZ about what a piss poor job Buckmaster did re the Danish calls. Someone wrote them and they said they relied on people writing in or sending in a list. At that time the Danish PT&T would give you a printout sorted by call and Zip code for about $1.00. Obviously beyond Buckmaster's budget.

But, these days I am sure most authorities keep their records on a computer of some sort so an electronic copy could be got. Then another computer could sort it all out (translate codes i.e. D = Technician) and slam it on a CD. Let's face it, it would probably be a nice little earner.

On uk.amateur there was a recent discussion of getting the Brit callbook on CD.

Seems Fred Lloyd has strated something.

I was reading the "Animal Press", a bunny hugger/save the
whales newspaper. There on page 2 was an item that shocked me:

Mark L. Morris, aged 92, Founder of the Morris foundation
died on July 8 in Naples Florida.

First of all, this proves that Morris is for geezers - wow 92,
definate geezer age. But what is going to happen now that Morris is
dead? Will the ARRL take over?

These are trying times. First the Coast Guard gives up Morris,
then Morris himself gives up.

: |> (Roman numeral)... so...he fiqured, why not ??? DiDiDiDaaah !!!!
: |> (Why do think it's called the 5th?)
: |>

: I don't know why it's called the fifth other than the fact that it was the 5th
: one he wrote.
: However the connection between the main beat of Beethoven's 5th and Samuel F. B.
: Morse's code is specious at best. Beethoven published his 5th in 1812. Morse
: first concieved the idea of the telegraph while travelling on the packet ship
: Sully in 1832. It was a number of years later before he published what was to
: become known ase Morse Code. Although it is possible that Morse based the letter
: V on Beethoven's rythmn, it is highly unlikely that there is any real connection
: between them at all.

: Unless of course someone can provide reliable published data to the contrary.

You boys have it turned upside down. True, Beethoven didn't know Morse code
and thus didn't form the rhythm of his opening cadenza (is that the right
term??) based on it--but the REVERSE has its own story:

During WW II, as the French Resistance was toppling, the French national radio
continually played the first movement of Beethoven's Fifth Symphony during the
final hours as the Germans were taking Paris. As long as it played, people
within the range of its sound knew that Paris had not yet fallen. It was
widely known at the time (yes, I remember!) that it signified "V for Victory."
It was highly dramatic and cause for great anguish when, after many hours of
continuous play, that towering music was abruptly silenced.

1287. Re: FT-530 Communications Port Info

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 03:25:55 UTC
From: stan@hprpcd.rose.hp.com
Message-ID: <25p7k3$7ln@hpchase.rose.hp.com>
Source record: 277317

If the Ft-530 uses a similiar scheme as the Ft-411, I have has success
with the following:

If you look at the schematic, the mike jack is a STEREO 2.5mm
jack. I found a stereo 2.5 mm plug as a electronics distributor.
The middle ring is connected to an I/O pin on the processor
through a (I think) 10K resistor. I found that when you put the
411 in the "clone" mode, you get 4800 baud rs232 with ttl
levels. I hooked up a ttl to rs-232 converter and was able to
copy the data to a file on my pc.

Someone on the net had written a translation program in ADA. I
haven't gotten around to translating it into C yet. Basically
the data is sent in nibbles with the nibbles swapped in each
byte. The whole record is 544 bytes long. I would guess that the
data itself is much different for the ft-530, but this would be
a good place to start.

I'll add my comments to this list. As a relative newbie (licensed
about three years now) I first got a bencher - to be kind, I thought
it garbage and was RARELY on the air with it. One of the local qrp
crowd brought a Kent to one of the meeting and I fell in love with it
and next time we went to Dayton I got one of the "kits". I assembled
it in about 10 minutes on my mother-in-laws couch (nice to have family
in Dayton :). You can *actually* adjust it (unlike the bencher) and
it feels *wonderful*. Because of this, I am on the air a LOT more on
cw these days. It makes you *want* to do cw :-).

I took it to a meeting once and someone wanted to play with it, but
was afraid to adjust it for himself - I told him to go ahead (he had a
bencher and was also never able to get it adjusted to where it felt
"right"). He was shocked that I would let him do that, but it is that
easy to adjust.

I have had a chance to play with their straight key and it also feels nice (I just don't like that style). The version I have has two seperate paddles and my only complaint is that it is a bit wide to be *really* comfortable for me, but I still like it a lot more than anything else I have seen. They also have a single paddle version (contacts on both sides of a single arm) that I'll get a chance to see at the next meeting.

No, I don't work for Kent, but I am really happy with the key that I have from them. I am still amazed that I *enjoy* working cw with that key (and I am FAR more into multi-bit digital stuff :-).

Take care es 72, Vikki.

I don't have the FAQ's handy.
I have one specific question...

In all the books, materials, etc. I have, it says that anyone wanting to
take a Novice exam for the first time can find just two General class
licensees and go for it.
However, these books are not current. (1990)

Is this policy still in effect?

If so, I will find two Generals next week...
:)

1290. Nasa boom-mic's and other?'s

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 08:51:33 UTC
From: ahall@ux4.cso.uiuc.edu
Message-ID: <25pqml$np6@vixen.cso.uiuc.edu>
Source record: 277322

Hello everyone,
I have a couple easy questions:
1) does anyone know where I can get a hold of some ear-peice boom-mics similar to those used in the nasa control rooms? I am looking for something that doesnt cause welts when worn w/ a bicycle helmet. Any suggestions (i've already got a lapel-mic) would be appreciated. I think I saw the type I'm thinking of advertised in Nuts N Bolts but now I can't find the issue. Any help would be appreciated (I've got a Yaesu FT411e- I think that's a 1/8 ear and 1/16 mic??)

2) does anyone know about the organization for bicycling hams?
I'd be very interested in any info regarding them.

Thanks a million ahead of time!!!!

oh, I'd appreciate e-mail'd responses--TNX

1291. Re: FT-530 Communications Port Info

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 13:51:42 UTC
From: jcw@kd4dts.dixie.com
Message-ID: <1993Aug29.135142.15252@kd4dts.dixie.com>
Source record: 277327

I don't have a FT-530 (and I really like my Icom better), but it seems like it should be fairly easy to break the signals out, and connect a logic analyzer. Then, start pushing buttons and see what changes. I did this with the Kenwood TM741 and couldn't figure it out, as they didn't seem to use anything that looked like an async or sync type link (no comments from you, KE4ZV).

TO ALL RADIO AMATEURS

SB QST ARL ARLB090
ARLB090 AMATEUR BILL IN CONGRESS

THROUGH ARRL EFFORTS A BILL HAS BEEN INTRODUCED IN THE U.S. HOUSE OF REPRESENTATIVES, H.R. 2623, THAT WOULD AMEND THE COMMUNICATIONS ACT OF 1934 TO FACILITATE UTILIZATION OF VOLUNTEER RESOURCES ON BEHALF OF THE AMATEUR RADIO SERVICE.

THE LEAGUE IN SEEKING THE LEGISLATION SAID THAT MANY AMATEURS ARE RELUCTANT TO PARTICIPATE IN VOLUNTEER PROGRAMS SUCH AS THE AMATEUR AUXILIARY OF THE FCC'S FIELD OPERATIONS BUREAU, THE VOLUNTEER EXAMINER PROGRAM, AND THE YET-TO-BE IMPLEMENTED VOLUNTEER CLUB AND MILITARY RECREATION STATION CALL SIGN ADMINISTRATION PROGRAM.

THE LEAGUE SAID THAT VOLUNTEER MONITORS FACE THE PROSPECT OF BEING ACCUSED OF BIAS OR OTHER MOTIVES, AND THAT VOLUNTEER EXAMINERS MAY FEAR BEING BLAMED BY AN EXAMINEE FOR FAILURE TO PASS A TEST.

THE LEGISLATION IS NEEDED, THE LEAGUE BELIEVES, TO ELIMINATE AN OBSTACLE TO VOLUNTEER PARTICIPATION IN THESE PROGRAMS, AS WELL AS TO PREVENT CIVIL ACTIONS AGAINST GOOD-FAITH VOLUNTEERS.

THE ACT IS REFERRED TO AS THE AMATEUR RADIO VOLUNTEER SERVICES ACT OF 1993. THE LEGISLATION WAS INTRODUCED BY CONGRESSMAN JIM SLATTERY

RACESBUL.289 DATE: August 30, 1993

SUBJECT: OPS - No exercise is EVER a failure!

Sometimes those who plan and execute an exercise worry about it going astray of its goal and possibly failing. Don't! Plan it, but don't be concerned about it "failing"! An exercise should never be pulled off flawlessly and be expected or reported as perfect. Possibly a fire drill, but not a disaster exercise. It is a training vehicle for the unusual, the unexpected, the extraordinary. Each one should result in improved plans, systems, procedures, knowledge, capabilities, and preparedness. If such be the case, then no exercise is EVER a failure.
Disasters and crisis are not things that most people like to think about. The failure to do so, however, can be a flaw that can come back to haunt you when least expected. It is partially for that reason that disaster exercises are held --- to reinforce in people's minds that the impossible can happen; and when it does, how to respond with the least amount of stress and still do the job they want to achieve.
In evaluating an exercise, consider the following:
a. How effectively did the people communicate (not radio communicate, but as people to people) with interagency counterparts, exchange information, compromise, put aside rivalries and parochial interests?
b. How well did they translate the thinking/planning and communicating into choices, decisions and actions?
c. How well did each participant think about their problems (in the exercise or real life experience) realizing that they could no longer function in any semblance of normal conditions?
(Condensed from an article by Stan Harter titled "Putting It All Together" written after a three day disaster seminar for city, county and other executives conducted by Pete Peterka, then Director of Emergency Management Services for Sonoma County. The

seminar included a tabletop exercise based on a hypothetical 7.9
Richter earthquake with a nearby epicenter that had "just
happened".)

```
Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 93/08/29 10 36$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
First part contains primarily European calls with US call district 0.

The index of parts:
Part 1 contains 4x1pi through wa0zti
Part 2 contains nv1a through ka2zvz
Part 3 contains wn3a through kc4zwi
Part 4 contains kj5aa through nh6zw
Part 5 contains wb7abp through wa9zxm
Part 6 contains oa4hv through zs4vg

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 8 months old (two terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#

# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
```

```
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update August 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).

1297. Radio Amateurs on USENET List Aug 1993 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 17:39:36 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Aug28.2@ve6mgs.ampr.org>
Source record: 276867
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 93/08/29 10 39$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 8 months old (two terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
```

Last update August 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1298. Radio Amateurs on USENET List Aug 1993 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 17:40:56 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Aug28.3@ve6mgs.ampr.org>
Source record: 276865
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 93/08/29 10 39$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 8 months old (two terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
```

Last update August 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

1299. Radio Amateurs on USENET List Aug 1993 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 17:42:14 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Aug28.4@ve6mgs.ampr.org>
Source record: 276870
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 93/08/29 10 41$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 8 months old (two terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
```

Last update August 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1300. Radio Amateurs on USENET List Aug 1993 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 17:43:28 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Aug28.5@ve6mgs.ampr.org>
Source record: 276866
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 93/08/29 10 42$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 8 months old (two terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
```

Last update August 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1301. Radio Amateurs on USENET List Aug 1993 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 17:44:21 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Aug28.6@ve6mgs.ampr.org>
Source record: 276868
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 93/08/29 10 43$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 8 months old (two terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian call lookups courtesy of the work of VE3RD packet callbook server
# installed on the VE6MC.#edm.ab.can.noam FBB BBS.
# US call lookups courtesy of the callbook@sat.datapoint.com email server.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
```

```
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update August 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).
#

1302. Amateur Radio in "Man Without a Face" (NON-SPOILER)

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 18:38:03 UTC
From: pschleck@cwis.unomaha.edu
Message-ID: <pschleck.746649483@cwis>
Source record: 277231
Cross-posted to: rec.radio.amateur.misc,rec.arts.movies

You don't have to see the movie to notice this one, it can be seen in the previews if you know where to look. The house owned by the teacher (played by Mel Gibson) has a back foyer or patio with QSL cards over the door (QSL cards are exchanged by amateur radio operators to confirm radio contacts, and are a ubiquitous presence in any ham's "radio shack"). The camera never gets close enough to make out callsigns, but the format and pattern are unmistakable (and they're in those clear plastic "QSL holders" that have been advertised in the back of radio magazines for years :-).

Since there are no other references to the hobby (either mentioned, or the sight of radio equipment), I tend to suspect that they belong to the real-life owner of the house, who stipulated that nothing be changed.

The locale seems to be an island in New England, near Maine. I didn't stick around for the credits. Does anyone know any more specific information about the location or the house and its owner?

Paul W. Schleck, KD3FU

1303. Nicad charger help needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 19:02:33 UTC
From: david@bu.edu
Message-ID: <25qug9$61i@news.bu.edu>
Source record: 277229

My brother repairs computers, and has salvaged the failed rechargeable batteries from several portables, removed bad cells, and put together a battery pack made from ten cells in series to produce a 12V battery that can be used with a handheld tranceiver. He has given me one of these packs, and my question is "how to I recharge these batteries?".

He is currently using a 12V 200mA output AC to DC unit. My concern is that there might be a need to regulate the current going into the battery pack, to avoid too rapid charging [will they blow up?]. I don't believe that the max current rating of a converter is any indication of output current, and that some other control is needed. Will the internal resistance of the battery pack be enough to regulate the current? Radio Shack sells a 500mA 12V converter. Will this do?

One other bit of info is that my brother says that it is a 2000 mA hours battery. Note that the batteries are permanently mounted in series and need to be charged as a unit [The whole thing looks like 5 short sticks of dynamite taped together -- I won't be carrying THIS onto an airplane as carry-on luggage!]. Any help will be appreciated.

>David<

1304. Crickets and CW

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-29 19:07:46 UTC
From: david@bu.edu
Message-ID: <25quq2$61i@news.bu.edu>
Source record: 277230

While waiting for my license, I have been attempting to learn CW. The other night, while practicing in humid 85 degree weather, I heard hesitant chirping of a cricket outside of a nearby open window. Between the heat, humidity and the cricket, I decided it was time to call it a night. When I shut down the super morse program, the cricket stopped chirping. Was my computer generating some inadvertent mating call for crickets?

Message-ID: <25r01v$h4s@ucunix.san.uc.edu>
Source record: 277233

Got another request for directions to Debco Electronics, so here goes:

Located at 3931 Edwards Road, Cincinnati, Ohio. This is in the "Norwood" municipality but directly adjacent to the Hyde Park and Oakley neighborhoods of the "Cincinnti" corporation (Norwood is wholly surrounded by Cincinnati). They are on the corner of Edwards and Dacey, one block south of Williams Avenue/Markbreit (changes names at Edwards) and approx. 7 blocks north of Madison Rd.; located on the West side of Edwards.

From I-71 Southbound, exit at the Smith Rd. Exit (actual wording may vary/have another street name AS WELL, sorry for the poor memory!). Ramp ends at Williams Avenue; turn left (E) 1/2 block across expy to Edwards then right (S) 1 block to Dacey & DEBCO on right (W) side.

From I-75 N/S, exit onto Ohio 562 Norwood (only goes East); exit at I-71 South ramp; next exit is the Smith Rd. exit above, etc.

From I-71 N, get off at the Smith/Edwards Rd. Exit (I remember this one!). The ramp lets you off onto Edmonson; turn right (E) onto Edmonson 1/2 block to Edwards; turn left (N) onto Edwards ang proceed ca. 4 blocks to Dacey and DEBCO on the left (W) side.

They used to be open in the evenings longer, but a quick call just now finds that their current hours are M-F 8-4, Sat 10-4, Sun closed (but they -did- answer the phone for me!).

As usual, no connection to etc., etc., just a customer, etc., etc.

In article <mumble>, SKLOSS, TIMOTHY WILLIAM <tskloss@zeus.tamu.edu> wrote:
>When you transmit, the RF is probably penetrating into the sensing
>circuitry and changing the observed pattern, hence tripping the alarm.

Another, albeit less enticing, possibility is that the heat
dissipated in the HT during transmit is just enough to disturb the
sensor.

SB DX @ ALLBBS $OPDX.125
Ohio/Penn DX Bulletin No. 125

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 125
BID: $OPDX.125
August 30, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DJ0WQ, AD1C, K1ER, K4CEF & Southeastern Cluster Group, W8CZN, WB8LFO, NW8F, K9AJ, N9NS, W0RJU and WD0GML for the following DX information.

4U1UN QSL ROUTE. Contrary to what was published in the September 1993 issue of CQ Magazine on page 105, AA2FN is not the QSL Manager of 4U1UN. In the same issue on page 132, it states that Jim, W8CZN, (NODXA member) is the QSL Manager, which is correcet. Carmelo, AA2FN, is one of the operators of 4U1UN and does have access to logs, but Jim, W8ZCN, has all the logs. OPDX was informed there is a backlog of cards, but this due to the station trying to computerize the logs and are experimenting with a couple of logging programs. This will help in a quicker turn around in cards. So, at the present, at the request of 4U1UN, cards are being checked manually from the logs. So please be pateint during this transition.

9G, GHANA. Mike, K9AJ, talked to Randy, 9G1XA (K0EU), this past week and has supplied the following information. (ed. Both are from the AH1A DXpedition team.) Randy will be in Ghana for the next 2 to 3 weeks on business, but will be active when time permits. He is using a TS-450, Alpha amp (1KW), CushCraft R-7 and on 160, an inverted "L" (Aki special) with vertical component about 40 feet. Randy has also taken RTTY gear with him. His emphasis will be on the WARC bands, low bands and RTTY. Suggested frequencies: CW - 3505, 7023, 10103, 14023, 18073, 21023, 24893 and 28023 kHz. SSB - 3795, 7085, 14195, 18115, 21295, 24935 and 28495 kHz. RTTY- 14085, 21085 and 18105 kHz (listening up). On 160 meters, he will be transmitting on 1827 and listening on 1831. Start looking around 0500z for him on 160 (9G sunrise is around 0530z). QSL via K0EU.

9N, NEPAL. Reports say Baldur, DJ6SI, and two other operators are active from 9N-land. There have only been a few reports of activity on the Ohio/Penn Network, but Dieter, DF4RD, has supplied OPDX with a list of

spots from two of the Bavarian Contest Club's PacketClusters. Call signs being used are 9N1BD (probably Baldur), 9N1AP and 9N1HL. Activity seems mainly on 20 meters, but there are reports on 15 and 40 meters. Check around 7005 kHz between 2200 and 2300z, 14025 kHz between 1500 and 1600z, and 14195 kHz between 2030 and 2130z. One spot had DJ6JC operating as 9N1HL on RTTY (14084 kHz around 1546z) and reporting to QSL via DJ6JC. The length of this operation is unknown at this time.

AH1A QSL STATUS. John, K1ER, reports all USA cards received direct (e.g SASE) have been mailed. Cards for Italy, Japan and other countries are about done. John expects that all cards received will be answered by mid-September. If you do not receive a card by the end of September, you might drop a note to K1ER.

CY9CWI and WV2B/CY9 QSL CARDS. Cecil, NW8F, reports he is not the QSL Manager for these two operations and has been receiving cards for them. He is the QSL Manager for Art, WA2UJH/CY9 and reports that he has only the log for WA2UJH/CY9. He also reported the cards for WA2UJH/CY9 were out 2 weeks after the end of the operation. QSL CY9CWI to VE2CWI and WV2B/CY9 to CBA.

FK, NEW CALEDONIA. Remi, FK8CP, continues to be active on 160 meters daily. The East Coast guys are working him between 1835-1838 on CW around 1000z.

K5MK/5, DERNIERES ISLAND (IOTA NA-119). Larry, K5MK, and Mike, WD0GML, will be active from here October 15-17. The island is located in the Louisiana State Center group (29-29.5N/90.1-91.4W). Activity will be on 10-40 meters including the WARC bands and on CW/SSB. Suggested frequencies are: SSB - 14260, 21260 and 28460 CW - 30 kHz from the band edge (+/- QRM). QSLs go to K5MK with SASE or the bureau. Additional informantion will be forthcoming.

KH5K CARDS. Mike, N9NS, QSL Manager for the KH5K DXpedition informs OPDX that he now has the QSL cards from the printer and processing has began. Cards should be in the mail now or sometime this week (August 30th).

SV/A MOUNT ATHOS. There still may be hope for an operation. Bruce, WD4NGB, received a telephone call, August 27th, saying that JA3MNP is still in Mount Athos and expects to be active from August 31st to September 2nd. This will be mainly a RTTY operation.

SV9, CRETE. Norbert, OE1NBW, is planning to be active from the Island of Crete between August 29th and September 24th. He will be active mainly on CW, but there will be SSB activity. Look for SV9/OE1NBW/p on the following frequencies: CW - 14009, 21009 and 28009 kHz, on SSB - 14209, 14309, 21209 and 28509 kHz. QSL via CBA or bureau.

ZS9/ZS0 DXpedition (by James, DJ0WQ). "We had a wonderful time on Penguin Island, making about 9500 to 10000 contacts. We had to stay a day longer because of a storm that kept us from leaving the island, but all went well. We will submit the necessary documentation to the ARRL within the next three weeks and the QSL cards will be going out in about

two months. The same goes for our ZS9 operation. We made about 6000 contacts." 73's and Good DX de DJ0WQ, James (ed. In last week's bulletin we mentioned Walvis Bay may be headed for deletion because the South African Government "may be" handing over the enclave to Namibia. It was reported that several issues and conditions have to be met before the transfer takes place. So it may be sometime before it actually happens (months to years?).)

ZY1, SANTANA ISLAND (IOTA SA-029). Mendonca, PY1UP (ex-PY0TUP) will be active from this Brazilian Island loacted near Rio de Janeiro. His call sign will be ZY1UP on CW/SSB and he will be active on all bands (except 10 MHz, still not legal in Brazil). QSL to: Joao Batista Guimaraes Mendonca, P.O. Box 108674, Sao Goncalo - RJ, Brazil, 24620-970.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

There is a record by Mannheim Steamroller that says "HIT IT" over and
over in Morse during one particularly energetic passage...

...no coincidence, knowing the perpetrators!

>examiners sent my application off to FCC Land, where it's currently
>in a holding pattern.

Congadulations, welcome, OM.

>So, while waiting for my license, I'm looking at radios and such.

Do more than look, buy one and listen. Learn how to act (and how not to)
on the radio. Learn the jargon and the protocol.

>Where's a good place to start to find out about what's going on?

Your nearest 2 meter repeater. Or your local ham club. Or look for a house
with lots of antennas, knock on the door and introduce yourself.

Where did you take the test? Try calling the head VE and ask to be pointed
in the right direction.

If you are in the Philadelphia area, give me a ring.

>2-meter, naturally, for voice and packet. What about 70cm? 23cm?

2 meter's is a good place to start. I enjoy talking to people on the
local repeaters, some packet (haven't quite gotten an IP address for
TCP/IP so I just use "regular" packet and working DX on 2 meter SSB.

I also heard MIR (CIS (ex- USSR) space station) on packet today. I missed
having my tnc set up so I didn't get to connect. They are on 145.550 (FM)
and usually run packet during the week and voice on weekends/holidays.
Note that they mean CIS time and holidays, not your local time.

You can talk to them when no-one is around (try 5am or mid week day passes)
outdoors with an HT. When things get crouded, you may need a bigger antenna
or more power.

I also know a guy that works the sattelites regulary. He used a 10 watt
out Yaesu ft-726r (until he got a 736r for a ridiculous price and sold
me the 726), a discone antenna in his attic for uplink and a 2 meter
automobile whip balanced on a barbeque (for the ground plane) sitting
on a small balcony.

Every day, rain or shine, bad propogation or good, sun spots or not,
the satelites are there. You just need to know when.

The 70 cm is actually 3 bands in one. 420-430 is used for atv (I think), 430-440 is used for CW, SSB, and satelite work, 440-450 is used for FM repeaters.

I've been told that there is a "better class of ham" on 440, but around here, (philadelphia, pa.) it's mostly linked 2 meter repeaters and the same guys as on 2 meters using their new dual band rigs. :-)

I expect there will be more growth on 220 and 902 before 1.2ghz because there is now a "use it before you loose it" urgency on those bands.

>Currently I'm thinking along the lines of a dual band 2m/70cm handheld
>that receives outside the ham bands, and a TNC for packet.

The only problen with that is the out of band receive usually makes the radio susceptable to intermod. In the city it is a problem, outside it is not.

>What about baud rates? 1200 baud sounds horribly slow to me since I
>have v.32bis on my computer, but the few people I've talked to say 1200
>baud is The Standard for packet. What's the modulation for digital?
>It wouldn't happen to be the same as for phone modems, would it? Could
>I use my regular modem for a TNC?

No, although the 1200 baud modems were based on Bell designs (and equipment) the 2400, 9600 and 19200 are not. You also need specialy modified radios for 9600 and above. There is lots of 1200 baud activity, not much 2400 baud, and many 9600 links, but the majority is 1200 baud. If you want high speed stick to landlines.

>What are good handhelds for limited bucks, and which ones should I stay
>away from? (I've seen a number of flames at Kenwood.)

The radio shack htx-202, now on sale for $200. (I own one, but have no other connection to R/S). I also have an ICOM W2a and a 2sat. I like them all. The 2sat is a good "pocket" rig, It rides the commuter trains with me every day.

>Is there a list of acronyms somewhere? (It took me a while to figure
>out what an "HT" was.)

I've never seen one. Sorry.

Good luck and 73.

Geoff.

P.s. some good habits:

73 is already plural.

Don't use "q" signals on voice (though many hams do).

Don't use "Break" to get into a conversation on a repeater. Although the standard is "Break, break, break" (3 times) for an emergency, many places use one "Break" for emergencies. Just say your COMPLETE call and wait to be acknowledeged. If you need to call somone feel free to interupt a long conversation with "CALL, PLEASE".

>73, Fred, K4DII
I agree with Fred. I work for a small municipality, as the only Telemetry and Instrumentation Technician. It is hard to find applicable trade journals unless you already know about them. (catch-22) InTech (ISA) and Mobile Radio Technology are OK, but only go so far. QST has theory, and hardware articles for the radio portions of my systems that I can relate to and use. We are on limited budgets in the 90s, and amateur prices are as good or better than a lot of commercial stuff. (For stuff that need not be type-accepted. :-)) I found the service monitor I now use at work in the pages of QST long before I saw it in MRT.

And, it was the exposure I got through QST and 73 that encouraged me to get my license.

73,

Chris KD6DSI

Source record: 277243

To charge NiCd cells, you need a controlled current. Use a higher voltage, a resistor, and Ohm's Law.

For example: If you have a source of 24 volts and you want to charge a 12-volt pack at 200 mA,

R = (24 - 12) / 0.2 = 60 ohms.

Further,

P = I^2 * R = 0.2 * 0.2 * 60 = 2.4 watts, so it had better be a 3-watt (or higher wattage) resistor.

Continuing with this example, you could use a 12-volt, 200-mA light bulb in place of the resistor.

The key idea is that to get controlled current, you use a voltage substantially higher than what you want, delivered through a dropping resistor. There are more sophisticated ways, but this is the simplest.

As an ex-leader (and JOTA Coordinator for the Eastern Part of VK3) I can assure you that VK Scout/Guide Associations both actively promote JOTA participtation by both male and female members. In VK you will also find female cub scouts/scouts/venturers and rovers.

JOTA is 3rd weekend in October Saturday 0000Z to Sunday 2359Z.

Hopefully I'll be operating from about 50 Km east of Melbourne during that time as VK3KTS (on VK Novice frequencies 3,590/21,190 calling freqs) or possibly as VK3DBB (if I can persuade him to come along to provide a full call supervisor).

Lookout for VK{0-9}SXX calls or VK{0-9}GXX calls on that weekend, generally these will be scout or guide calls.

1319. IBM/HamComm CW decoder interface problem

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-30 05:03:44 UTC
From: white@ccsua.ctstateu.edu
Message-ID: <1993Aug30.000344.1@ccsua.ctstateu.edu>
Source record: 277240

Hi
I am having trouble with the 741-based interface unit that works with
HamComm, the CW decoder program for IBM-PCs.
I can't seem to get the input signal (or decoder signal) frequency above
100-150Hz, and the software needs the signal up above 350Hz-500Hz.
I checked all behaviors on the circuit in accordance with the docs. No luck.
THe scope/analyzer functions work (showing the too-low frequency). I'm using
the audio record jack on a Kenwood R1000 receiver, and the CW signals
are clear and legible. I _DID_ however substitute tantalum caps instead of
polarized 1uF 16V caps in the buffer circuit (problem??).
Suggestions appreciated.
Regards
Harry

>receiver will capture better. One gets all sorts of incorrect readings
>that cannot be interperted. With a beam one can swing around vertical and
>horizontal once each and find out the polarization of the transmitter.

But a doppler in motion will show which signal is multipath and which
is real very quickly. The multipath signal will appear to change
direction as you move while the fox will not. There *are* anomalous
situations where that won't be true, but then there are situations
that fool the beam too.

>)A step attenuator can help here. The doppler doesn't care if the signal
>)is weak or strong, it merely measures the difference in time of arrival
>
>It does care if the signal is weak, it will not be heard. The antenne are
>NOT sensitive. One reason, losses in the PIN diodes, another, all the
>transmition line mismatches.

Again that depends on the doppler and it's installation. You shouldn't
lose more than 3 db through the doppler array. If that's all that's
keeping the fox from disappearing in the noise, then you have a problem.
But the more usual case is that the fox is somewhere in the other 140 db
of your receiver's range. Most ham rigs have more sensitivity than they
need. If you setup the feed array correctly, there shouldn't be any
mismatches. Not that a little SWR on a short cable is going to make
much difference in received signal strength anyway.

>)you're in a multipath situation while the beam does not. Doppler systems
>)are great because they work well while you are mobile in motion, giving
>)you a continous readout of the relative bearing of the fox.
>
>Do not get me wrong. I have one and like it. But it takes expirence to
>use it right and cannot be the only tool in use. I have found too many
>ways to fool it, when I have been the fox.

You're right that the doppler is only a tool. It won't make a bad
tracker into a good one. But like an oscilloscope compared to a
VOM, it can certainly make many tracking tasks easier because it

offers more simultaneous information to the tracker than can a
beam and attenuator. Those are good tools too, but are more
difficult to use effectively in motion, and become less useful
the closer you get to the fox. I think a small loop, or a double
ducky, are most helpful in the final chase. They're less bulky
than the beam, and offer a much sharper null. Beams work best for
getting an initial bearing while you are still stationary and the
signal is weak enough to exploit the limited FB ratio of the beam.
Where the doppler works best is in the intermediate range between
detecting a signal and the final kill while you're driving around
trying to pinpoint the area where the fox is hiding. Of course
different types of hunts require different techniques, and different
equipment. The hunts that I've seen around here are limited to an area
of about 20 square miles in suburbia, and are strictly timed hunts with
no mileage penalties. That tends to favor hunters who stay in
motion most of the time.

>in your area get around this problem? Also, what type of links do you run,
>and at what speed?

In Georgia, we use the LAN system (actually should be MAN, but the term has already become corrupted too much to fix it now). We have several 2 meter frequencies, and a couple of 440 MHz frequencies for user access to the system at 1200 and 9600 baud. We don't segregate TCP/IP from other packet. The BBS's operate a user port on the LAN frequency, and a second port on the backbone and forwarding frequency. That port is not for users. It's only used to forward traffic from one LAN BBS to another. The user's only access to the backbone is via his LAN switch node. That too is dual ported, and allows a user in one LAN to contact a user in another LAN via the backbone relay facilities, or act as a normal repeater node on the LAN frequency depending on what the user needs to do. Some LAN switches are actually duplex repeaters (like a voice repeater) with the switch node attached. The backbone links are at 56 kilobaud operating either at 70 cm or in the 222 MHz band, again in a checkerboard fashion to facilitate frequency reuse. The system doesn't yet cover the entire state, so some stations must link in via various kludges if they are located in more remote areas.

That's the GRAPES system. It currently has thruput in excess of our needs. There is also a separate PacketCluster network operating on a common frequency at 9600 baud, with ocasional separate user access frequencies for individual clusters, and there is a ROSE chat network operating on a single frequency statewide. These latter are easily overloaded due to their topology, and usage is restricted, IE no file transfers or mail forwarding.

>frequencies ? Where can I get info about Motorola radios and GE ones too.
>
>Are these very expensive compared to the regular ham radios ?

The HT220 and the GE Mastrs are obsolete in the commercial market,
though many police departments and others are still using them.
They show up at hamfests quite often. They are crystal controlled
and are available as hi-band or UHF. The hi-band units can be
re-tuned for 2 meters, and the UHF units can be re-tuned to 70 cm.
While some of the units are single frequency, others have 8 channel
decks. I bought 8 GE Mastrs for $50 *total* at a recent hamfest.
7 worked and one was a parts radio. The HT220s command a premium
for some reason and may cost upwards of $100 each. IMHO, the GEs
are better radios, but I'm sure there will be arguement on that
subject since the Motos are so much more highly prized by hams.
The HTX line is current production and runs in the neighborhood
of $600. They are synthesized, but limited to 16 channels in all
cases I know about. None of these radios have the bells and
whistles of ham HTs. But, they work very very well with minimal
to no intermod, and extreme ruggedness since they're designed
for the cop market.

>In similar lines what commrecial manufacturers make equipment for HF range,
>and can be used by amateurs.

The big names are Harris and Rockwell/Collins. There are others, such
as Standard Radio Systems, but the big two dominate the market. The
ARRL is using Harris equipment I believe. Again they are pricy with
their offerings starting at the price level of the most expensive
amateur rigs and climbing rapidly from there.

>2-meter, naturally, for voice and packet. What about 70cm? 23cm?

Band usage is area specific. Visit local club meetings, talk to
local amateurs, and find out what's hot in your area. 2 meters
is sure to be populated, but you may feel more at home with the
crowd on 70 cm in your area. It's very locale specific and interest
group specific.

>It wouldn't happen to be the same as for phone modems, would it? Could
>I use my regular modem for a TNC?

Sadly no. Packet does not use the same tone pairs or modulation
methods as telephone modems. 1200 baud packet uses the Bell 202
standard which is a *half duplex* standard that is not the same
as the Bell 212 standard used in 1200 baud phone modems. Besides,
most phone modems today are "Smartmodems(tm)" that have their
own controlling microprocessors with embedded firmware. That
firmware is *not* compatable with packet TNC firmware.

A good TNC, like the Pac-Comm Tiny 2 or the MFJ-1274, is in the
$120-$140 range new and can often be found used in the $60 range.
Or, you can use the Baycom approach which is a simple single chip
modem attached to your computer with the computer software doing
the TNC function. Unfortunately, such simple systems are speed
limited. If you want to run 9600 or 19,200 baud, you'll need the
real hardware TNC and an add on modem which can run another $100.

>What are good handhelds for limited bucks, and which ones should I stay
>away from? (I've seen a number of flames at Kenwood.)

The RS HT202 is a good 2 meter HT for the money. It's nearly intermod free, and fairly rugged. Better is the Icom G series, but you pay for that better. In dual band HTs, I still like the Yaesu FT-470 which has dropped in price since the newer FT-530 has come out. Alinco, Standard, and Icom also make reasonable dual banders, but all, including the FT-470, suffer from intermod to one degree or another. That seems inherent in wide band HTs. The FT-470 still excells in user interface IMHO, and has excellent power saver features. The features you want in an HT are ruggedness, low intermod, good battery life, and a user friendly control system. The very small HTs usually have limited battery life, aren't very rugged, and often suffer more intermod since there's less room for good filtering. Also, if you have average size fingers, the tiny radios are often difficult to operate and may require bifocals to see. :-)

I am interested to find a logging program which will run on an IBM PC clone and take care of my logging for me. I am interested in the standard features such as automatic detection of past contacts, replicating static data (dates, etc.), and general usefulness.

I was hoping that someone would have experience with one that is quite good and that they could direct me to the source.

Thanks, in advance, for assistance!

I have the Icom IC-24AT and I love it. I bought it at the Dayton
Hamvention last April, and the only problem I've had with it since
then is when my cat knocked into a sink of water while it was powered
up. When I found it, it was completely dead, so I turned it off,
opened it up, drained it out, and let a fan blow over it for about
3 days. When I finally re-assembled it, it came back to life with
no side effects at all. I guess it says a lot about how indestructable
Icom radios are.

From: ron@topaz.bds.com
Message-ID: <25t9svINNeoa@topaz.bds.com>
Source record: 277260

At least the digital portion of 20 Meters was sane. However it looks as if the ARRL is posturing itself to ruin that. While I endorse the concept of limitted automatic operation within specific frequencies on HF, the new RM is not technically feasible.

The issue is the misnamed "semiautomatic operation." This is a term to describe the communications between one automatic and one non-automatic station communicating with each other. The stipulation is that the automatic station does not transmitting except to answer communications initiated by the non-automcatically controlled station.

The ARRL seeks to allow this on the entire digital subband (i.e. the CW portion). The techncical problem is that semi-automatic control is not any better than automatic control. The fallacy is that the initiating station will be able to make sure the frequency is clear. While this works marginally at VHF frequencies, it is impossible to attain on HF. A station engaged in an ongoing QSO will be stomped on by some AMTOR BBS if the semiauto station can't hear the existing QSO, unlike an non-automatic station where both sides would be listening for a clear frequency.

I encourage HF RTTY and CW users to seriously consider what this is going to mean to their operations.

-Ron

Ban the use of semiautomatic weapons on HF.

Apparently my condensor mike cartridge has bit the
dust. Is this common and, if so, is there protective
circuitry I can build to prevent it?

I am considering making a spare mike from a Radio Shack
power mike. It is a dynamic mike with noise cancelling.
Does anyone see a problem with that? I think I will install
a 1:1 isolation transformer on the audio chain which should
eliminate any problems with interfacing. Since the normal
condensor ground is floating and 8-volts is supplied to
the condensor mike, how is the internal part of the condensor
mike designed with electonics? Does anyone know the schematic
for the condensor mike internal wiring?

I ran into a problem after opening up my TS-430 case where the wiring harness on the bottom of the radio got pinched. It caused intermittent problems until I found it. Other than that, there are a couple of known problems with the 430 and the FM board. There are, however, fixes which can be gotten from Kenwood. You might give their tech support a call.

I don't have anything against the digital modes on HF, but I agree with others that this business is going to far. It is bad enough that we CW operators have to co-exist with these automatic stations, but to think that it is ok, if only one of the stations is automatic and the other non-automatic, is for the birds. There will be wall to wall crap on 20 meters cw. If the automatically run station answers to another station, it can still be jamming a frequency because the station that initiated the communications didn't hear you on the freq.

It really irks me that these modes have spread to all the way up into the ssb portion of 20m (used by DX stations) down to well into the cw portion.

1341. Passed 20 W.P.M. test

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-30 20:14:12 UTC
From: bruce@pixar.com
Message-ID: <1993Aug30.201412.2447@pixar.com>
Source record: 277266

I passed the 20 WPM test on Saturday, so I'd like to pass on my observations as they may help someone else.

I expected to pass the 13 WPM test, not the 20. I can copy by ear at 17, much slower if I have to write anything down. I copied what felt like a third to half of the test transmission, but still got enough to get 80% on the multiple-choice test. The examiners were ARRL VECs. They provided individual cassette players with headphones for the tests.

I studied by downloading the AP News from Compuserve and having Morse Academy send that while I copied by ear. I avoided writing anything down while I studied, since I was more concerned with understanding words in code than transcribing characters. I'd suggest that anyone else who has the goal of passing the 20 WPM test do that: forget about writing down copy, relax, and listen to the news in code for half an hour or more every evening. The AP headlines on Compuserve run about 25 minutes at 20 WPM, and they provide a new text every hour. I wrote a small program to translate inappropriate characters in the AP text to the ARRL code test character set, and to remove extra spaces. I studied using a Farnsworth character rate of 22 WPM, and a word rate that allowed me perhaps 90% copy. I found that there was enough context to keep up at 90% copy, even if I dropped a few words from a news story. Learning how to copy in a relaxed fashion when you are missing 10% of characters will teach you how to ignore the characters you didn't copy instead of hanging up on them, which is extremely important. I did hang at the 13 WPM plateau for a few weeks, but eventually pushed across it after studying for an hour an evening every day for a week.

Just before I took the test, I listened to three 20 WPM examinations in my car, copying by ear and using my 286 laptop and the Morse Academy software. I use the Disney Sound Source as it is louder than my PC's speaker, but that is not essential. I think the warm-up helped a lot.

When I took the test, I wrote down only things that I thought would be test answers, and nothing else. My handwriting is very slow due to a mild neurological problem, and my longhand is even slower than my block lettering, so this was a good strategy for me. I wrote the callsigns, the signal report, and most of the words that came after "is" or were otherwise keywords. For instance, when the transmission said "my occupation is mechanic", I wrote down "mechanic" and left it at that. For "my QTH is 4 miles North of Auburn, Texas", I wrote "4 N Auburn, Tx".

Even using the above strategy, I missed a lot. I got 4 characters of one callsign, and even less of the other callsign. I missed a whole sentence somewhere. However, I had enough written down that when I saw

the multiple choice test, I could determine what the callsigns must have been from my partial copy. I was sure of half of the answers, and had enough to make good guesses on the rest of them. Still, I was shocked when the examiner found only two wrong answers.

So, to reiterate: forget about writing things down and learn to copy by ear exclusively. Once you have passed the test, you'll have lots of time to learn how to transcribe a transmission, if that's what you are interested in. Listen to the news or some other comprehensible text at the fastest rate at which you can still comprehend the story even though you are dropping characters and words. Warm up before the test by listening to sample examinations in your car for 15 minutes or more.

Oh, by the way, I don't really like the code, but I didn't want to wait for it to be eliminated before I got an Extra class license. I also wanted to have a higher class of license than most of the old crocks who felt that I wasn't a "real" ham because I was a code-free technician. Now, I can ask _them_ why they don't upgrade.

I have an Icom 765 which gives excellent service. However I have trouble
with RF getting into the compressor. Has anyone else experienced this?
Without the compressor the rig works normally.

You are correct, Eric! However, I think Russell is referring to the fact that most radio manufacturers have "documented" modifications for "MARS expansion", but few of them will send you the docs on them unless you first show possession of a MARS license!

Not to worry though, Russell! The requirement on the MARS app is a bit misleading. What you really need to have is equipment to work those frequencies available to you in time to work the required minimum in the first six months (and each additional six months).

Hello everyone,

From reading the postings on the performance of the most popular dual band HTs (Alinco, Kenwood and Yaesu), it is clear that intermod is a problem in all of them. I am considering buying a Kenwood HT-78A dual-band handheld, because it has features which I find very useful. However if the intermod problem is very bad on this rig, that could make it worthless for me. I plan to use the HT in the San Francisco Bay area, which I've heard is a problematic zone due to high RF activity. So maybe the HT-78A will not perform as expected and I might need to consider a different HT.

Opinions of this unit, the intermod problem and solutions are most welcome!

You can send me e-mail to this address: gosset@132.248.32.1

Thanks in advance!

: Any help would be appreciated!
:
: E. Fred Basham / KC6OSV

You might try to get some gain in the direction of Loma Prieta. The high
point to the south west. It is possibly a repeater with an input of
427.250 video 431.750 audio, with a callsign of WD6GYH.

The two UHF ATV frequencies are 427.250 MHz and 434.000 MHz video with
audio up 4.5 MHz. The local atv ers have nets on thursday evenings on
147.06 from mt diablo and 145.51 simplex in the south bay. Check into one
of the nets, the guys are interested in bringing in new hams.

Greetings. I'm looking for a printed master index for QST for
all years from 1950 to present...or as close as I can get.

W8BID has a printed one covering 1950-1972 I've seen.
Someone else mentioned Dah-Dit Publishing printed such things,
but I've not seen them...

Suggestions, anyone?

Regards...and thanks,

They do a great job. They've bought several pieces from me (four or five if I remember) including a fiction story. I got to review each one. Kirk even gave me his home phone number so we could discuss the work over the weekend.

In the case of "How to Become a DXer," they liked the self-deprecating, satirical, bent of the piece but ran into trouble with the league's editorial review board. I believe the comment was something to the effect of: "this is a very funny piece which should have never been written."

How Mark and Kirk managed to get it printed after that is beyond me. These guys are committed to making their magazine track the times and the membership. God knows, I'm probably going to receive a lot of interesting mail about this article. But I certainly feel very good they had the stamina to argue its merits and win the debate.

This is not the kind of thing I've ever seen in QST before.

Cheers,

Joe

Last-modified: $Date: 1993/05/16 21:57 $
Version: $Revision: 1.05 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu

1354. Re: There goes the rest of 20M

Newsgroup: rec.radio.amateur.misc
Date: 1993-08-31 04:10:18 UTC
From: dts@world.std.com
Message-ID: <CCLvL8.9x9@world.std.com>
Source record: 277273

The proposal made by the ARRL for "semiautomatic" operation simply legitimizes operations that have gone on for a long time. The APLINK system of AMTOR stations has been in place and has not caused problems with interference. The point here is that such stations do NOT send out beacons, and thereby do not initiate interference. It is possible to have trouble with semiautomatic operation, but it is far preferable to the autostart RTTY systems which are still active, and which beacon all over qsos on "their" frequencies.

It is expected that the "gentlemen's agreements" will continue to exist and subdivide the digital subbands to allow many modes. The main thing we are trying to keep in the digital community is to have 14.080 to 14.090 clear of burst-mode emissions (AMTOR, PACTOR, etc.) to allow a space for DX and general RTTY (baudot) operation.

I do not believe there will be any significant change in the 20 meter or other bands in the digital section, other than the likely decline of HF packet in favor of more spectrum-efficient modes...

In article <1993Aug30.185907.4627@ccd.harris.com> drs@ccd.harris.com (Doug Snowden) writes:
>I don't have anything against the digital modes on HF, but I agree with others
>that this business is going to far. It is bad enough that we CW operators have
>to co-exist with these automatic stations, but to think that it is ok, if only
>one of the stations is automatic and the other non-automatic, is for the birds.

Have you experienced QRM from an automatic or semiautomatic station on 20m digital? The semiautomatic proposal was carefully worded to prohibit systems that are using modulation wider than 500Hz, and prohibits beaconing. Both of these DO cause interference today in the digital subbands, but the new rules will help, not hurt.

>There will be wall to wall crap on 20 meters cw. If the automatically run
>station answers to another station, it can still be jamming a frequency because
>the station that initiated the communications didn't hear you on the freq.

It really burns some that the CW operators use up 50 or 60 kHz of the band, for a single encoding scheme, where the digital folks use less than 30khz in common usage for RTTY, Amtor, Pactor, clover, etc. The digital modes RARELY extend below 14.060, with occasional exceptions during the few RTTY contests a year.

>
> It really irks me that these modes have spread to all the way up into
>the ssb portion of 20m (used by DX stations) down to well into the cw portion.

What stations are spreading up above 14.100? The only thing I have ever heard there is HF packet autoforwarding. Then again, the phone bands for the US start at 14.150, so there is some argument fo using 14.100 to 14.150. Note that the APLINK systems, the primary semiautomatic users, do not use this area of the band.

>
>
>
>Signed, Burned up
>
>N4IJ, Palm Bay, Fla
>

The bands are there for everyone and every mode.

Pardon me if this is a FAQ, but I didn't find it in the FAQ or anything
that I have yet obtained from ARRL.

I recently heard from some licensed hams (I am still studying) that any
books such as those sold by RS, Kenwood, etc. became out of date as
of 01 JUL 93, but I didn't ask why at the time. Now I wonder.

Is it only the question pool that changed? If I study from an old
book, am I still likely to pass? Is there a summary somewhere of
what changed?

Thanks in advance,

> baud is The Standard for packet.

If you haven't already gotten in touch with other amateur in your area
(or with a club), you need to find a local ham who's really into packet.
Find out how packet is used in your area. 1200 bps is pretty standard,
but some areas are upgrading. In some areas 9600 is used for the
backbone, in others, you might find 9600 available as a user access
port. Find out what's being done in _your_ area, since that's what
you'll be communicating with.

> What's the modulation for digital?
> It wouldn't happen to be the same as for phone modems, would it?

For 1200bps, it's actually an old and virtually obsolete phone modem
standard, Bell 202.

> Could
> I use my regular modem for a TNC?

Not really. Not only does your modem probably not do Bell 202(it's
half-duplex, and Bell 212 modems(which are dirt cheap now) do full
duplex, so running Bell 202 on a phone line isn't worth it), packet is a
synchronous protocol, and your modem(not to mention the serial port
on your PC) generally expects asynchronous communications. And it's not
ordinary synchronous, it's bit-synchronous, with bit stuffing. Suffice
it to say that the typical personal modem isn't set up to deal with this.

If you're willing to do a bit of soldering(and are running a PC clone,
you can pick up a modem kit for about $50 that can be used(with the
appropriate software, which will handle the bit-stuffing, etc) for
packet. For your first packet setup, I think you're better off spending
the $100-$120 for a TNC2-clone type TNC(MFJ 1270B, Pac-com Tiny-2, etc).

> (Maybe I'll have my license by Christmas...)

Judging from recent postings about license receipt time, you should get
it by Dec 1st.

You have got to be kidding. What 20 meter band have you been tuning too?
I have heard plenty of nonintentional interference caused by APLINK stations,
packet BBS's, MSO's etc. You surely did not mean this literally. You must
have meant they do not cause a huge amount of interference because interference
they do cause every day!

<Bruce's observations deleted>

C-O-N-G-R-A-T-U-L-A-T-I-O-N-S

See? It wasn't all that hard to do. The _Wheel of Fortune_ approach
worked for me too. Just write down what you KNOW you heard and
fill in the rest later.

As you probably know, 4B is a really let down after 4A. All you need
to do is read the study guide a couple of times and breeze through it.

So, to reiterate: forget about writing things down and learn to copy by
ear exclusively. Once you have passed the test, you'll have lots of
time to learn how to transcribe a transmission, if that's what you are
interested in. Listen to the news or some other comprehensible text at
the fastest rate at which you can still comprehend the story even
though you are dropping characters and words. Warm up before the test
by listening to sample examinations in your car for 15 minutes or
more.

I liked that summary so much I thought it would be good to resate it.

Oh, by the way, I don't really like the code, but I didn't want to wait
for it to be eliminated before I got an Extra class license. I also
wanted to have a higher class of license than most of the old crocks
who felt that I wasn't a "real" ham because I was a code-free technician.
Now, I can ask _them_ why they don't upgrade.

I really didn't care one way or the other about the code issue while I
was studying. It was just one of those things that one had to do in
order to achieve a certain licence class. Now, however, it's nearly
the only mode I use on HF.

I can appreciate your view though, and I really admire your attitude
WRT getting it out of the way and moving along with the process.

Hold the old farts' feet to the fire Bruce.

(Bruce's technician licence was issued last October. At this
rate I expect he'll go from zero to Extra in less than a year.
That's noteworthy in itself.)

Again, congratulations Bruce.

Hello to all-

My brother is relocating to American Samoa for two years starting this November. He is trying to get his amateur license so that we can keep in touch, but may not be able to take the test before he leaves.

Does anyone know if there is an active amateur club on American Samoa? If so, can you provide a contact person and/or address?

Thanks and 73!

Ron (wb8ruq).

As of July 1, the question pool for Technician (and Novice?) changed, although if you actually know the material rather than having memorized the questions, you should do OK. I have not seen the new question pool but I have heard that they simply rephrased some or changed values/numbers.

They change the question pool for each class every 4 years in rotation - General class will have a new theory test on July 1, 1994. I am unsure whether they have bundled the Novice and Technician theory together in this update schedule.

Also, as of July 1, 1993 you must take a Novice exam from a team of VE's rather than from two General class amateurs...

Hey Ron....
(and any one else who knows...)

I can't say much for 20m... but on 80 and 40, I've been hearing more and more TTY (of some kind) as the years go by.... plus that wheezing sound of packet in the 7100-7107-8 region.
They just start sending right on top of a CW QSO...and you can't send QRL back....they are oblivious to all but what they want to hear.

Also...I've been hearing more and more SSB on 80m (3695-3705), some of which is USB, rather than LSB....some are in English, some are in some kind of Spanish sounding-like language.
Very rare do I hear call signs, and those that are given, are done so slurred-ly that I can't be sure what (mainly where) was said.

This is not JUST winter-coming probagation increases...as I've noticed it for the past few years on the rise.

Any ideas?

The APLINK system of AMTOR
stations has been in place and has not caused problems with interference. The
here is that such stations do NOT send out beacons, and thereby do not
initiate interference.

I don't know where you operate, but these APLINK stations are a problem.
They very much initiate interference as there is no way for the calling
station to tell if the transmissions of the APLINK station are going to
disrupt another QSO. This happens to me on 20 all the time. The new ARRL
proposal just legitimizes the use of this all over the band, rather than
keeping all the AUTOMATIC uses in the snake pit section of the band.

Alan Bloom (alanb@sr.hp.com) wrote:

: I thought that the GFI measured the differential current in the hot and
: neutral wires. If the GFI sensed ground-lead current, then if you touch a
: "hot" wire while standing on earth ground (swimming pool, for example),
: the GFI would not trip. (Since the return current would be through the
: earth, not the safety ground.)

And other posters agreed (and noted correctly that they should be
called GFCI's since they interrupt the circuit, not the fault).

But here's an experiment for you. Connect up a GFCI outlet as
follows: input "hot" to a "hot" 120V wire; input "ground" and
"neutral" to a neutral 120V wire. If you connect a 10k ohm
resistor from "hot" output back to the "ground" input reference
terminal, then the thing trips, as you'd expect, since there's
about 12 mA going out the "hot" throught the GFCI that doesn't
return through the "neutral" output lead. Remove the 10k
resistor and reset the GFCI. Now connect about a 10 ohm resistor
from the "neutral" output back to the "ground" reference terminal.
Many (all I've ever checked this way) will trip. If the neutral
wire simply went through a core in the GFCI to sense imbalance,
there would be no current to cause it to trip. What's going on
here?? This is left as an exercise for the reader; don't email
me about it--I already know the answer. (See ap notes for GFCI
chips if you are in the dark about this.)

|> The ARRL seeks to allow this on the entire digital subband (i.e. the CW
|> portion).

Ron,

I respectfully submit that frequency coordination of various modes within the Amateur bands should not be the task of the FCC, but of the Amateurs themselves. I'm no fan of the ARRL's policies, but here I think they are attempting to remove restrictions imposed on us by outsiders so that we can regulate our own operation. Obviously, there's going to be lots of pressure on semi-automatic stations to stick to a band plan.

I'd prefer to see the various government agencies allocate the bands to amateurs without discriminating between modes, with the amateurs themselves establishing the subbands for various modes.

I'm not kidding at all. The original poster was complaining about interference to CW ops, which I have not seen from the digital folks. Further, I will agree that MSOs and Packet BBSs have caused some interference. The Aplinks do not INITIATE interference. If a user trying to call one causes QRM, that's the user's problem, not the APLINK's. APLINKs do NOT beacon. The interference problems that have occurred have primarily resulted from wide signals and from beaconing. The new rulemaking proposal prohibits both.

I'm not kidding at all. The original poster was complaining about interference to CW ops,

No the original poster (me) was complaining about interference to other digital operations. I'm an avid 20M AMTOR user and already have a problem with APLINK BBS's which are not even legal in this country (though there's a number of them down in Centeral America). I just used a bit of hyperbole to point out that under the new proposal, there's nothing that prohibits someone from putting up a APLINK board on 14.025 except the same type of thing that keeps people from putting attended stations down there (some last final shred of courtesy).

If a user trying to call one causes QRM, that's the
user's problem, not the APLINK's

The problem is the Hidden Transmitter problem is much more prevelent on HF and people insist on just using the same crappy thirty-nine cent approach to operation that they can get away with on 2 meters on HF. The problem is that the user of the APLINK can hear a clear channel and cause the APLINK BBS to kick up and clobber a QSO that he can't hear but would have been heard had their been some human at the APLINK site.

Semiautomatic control is not any different from Automatic control. For HF it's technically the same problem and should be treated as such.

>packet BBS's, MSO's etc. You surely did not mean this literally. You must
>have meant they do not cause a huge amount of interference because interference
>they do cause every day!

When I operate CW, I get interference from CW stations, too. In a crowded band there is often interference, with causes ranging from propagation to carelessness to inconsideration. Most of the "interference" I have heard on CW is from stations a couple of hundred Hz away. It happens. Go to a crowded room and carry on a conversation. It is the same type of thing. I am a 99% CW operator who accepts the reality that lots of hams want to use more high-tech digital modes. I am willing to share the band, and accept that when lots of stations get on, CW and other digital, then things get a little crowded. I consider all interference, from CW or any other mode of operation to be equal. It is NOT less annoying if it comes from a CW station.

All in all, I generally favor regulations that permit amateur operation rather than prohibit. I do not personally operate these digital modes, either automatic, semi-automatic, or fully automatic. I am willing to let these issues be decided by those who do, believing that the amount of interference to me will be the same whether the interfering station is CW, RTTY or SSB.

I recently received a QSL card from a US ham who was vacationing on Dauphin Island. He signed a portable call (K1RH/1D3).

There is no mention of this prefix in my ARRL DXCC list. Is this a valid country?

Curious minds, with 98 DX confirmed, want to know!

Yup, all the time. Works good when your "convoying" with some other hams who, for whatever reason, aren't paying attention to the radio when you're trying to call them. Also good for relaying the simplex freq you're using to someone who's trying to join in but doesn't know where you are on the band...

|>

I'll back Tom up on his above opinion. I took the test on 6/14 (still waiting for the ticket though) and found the tests dated 1 July 1993. There were a few question that seemed new or reworded, but I had the material under some control. Passed both the Novice and Technicain exams after studying the RS guide.

If ya haven't memorized question/answer pairs, but rather absorbed the concepts, you should do fine.

K1RH travels up and down the East Coast, operating from offshore
islands. The /1D3 does not designate any prefix, but is a legal
but confusing to the uninitiated, designator used by those
in the IOTA - Islands on the Air - awards program. You may have
also heard a QTH designator of NA-nnn. The IOTA program publishes
a thick directory listing designations for islands around the
world NA for North American islands, OC for Oceania, etc.
Info in IOTA is published regularly in the DX columns in CQ and
QST as well as in DX Club and specialty DX periodicals. Unfortunately
don't have the info at hand to post directly here,perhaps another
kind netter can do so. Hope this helped. 73 Chuck.

Yes, it is a valid country - the U.S. of A. I think these
are made-up prefixes, perhaps for IOTA purposes. It's nearly
always K1RH who does this. (Is it still called a prefix when
it's at the end??).

>>>>Curious minds, with 98 DX confirmed, want to know!

Well, if you didn't have W confirmed before, you have it now!

Incidentally, I believe you can sign almost anything you want to
after your call. I have heard QRP people suggest that you sign
with your power, so if you are running 3 watts you can sign W1XYZ/3W
and some people will think you are in Vietnam (where you would really
sign 3W/W1XYZ). I've heard a W8 signing /WV for West Virginia. You
probably can't sign /SOS, but I dunno for sure.

In India, if you operate from a club station you have to append
the suffix of your home call, there is one poor fellow who has
to sign something like VU2TTC/LID (since he is VU2LID) - it's a
tough life out there.

Dave, it took me until the end of this paragraph to remember that on your side of the "pond", a "coach" is what we on this side call a "bus". (I recall seeing a sign on my first visit to the UK that read "Football coaches prohibited unless booked in advance". In the U.S., that would mean that the "director" of the football team was only permitted to enter if arrested ahead of time... ;-)

I am afraid that even isn't true. After all, wouldn't we all use something
else than the bell202 modems on VHF, which were thought of as a stopgap
in 1983 or earlier and should have been replaced many years ago?

Unfortunately, congestion doesn't lead to better practices. People ask
for more and more frequencies instead of using them more effectively
and don't change their AFSK channel to a 5-channel allocation (1200 baud FSK),
or a 9600 baud information highway...

It is time to stop old weels from blocking the main road.

>beaconing. The new rulemaking proposal prohibits both.

On HF, it is a common possibility that you cannot hear if the frequency
is in use or not because of short-skip effect and others.
Hence, _both_ stations should check for interference and it common
to ask if the frequency is in use before you use it.
With semi-automatic stations, this is no longer possible.

Assume that you're working rare DX. Another ham, a hundred miles away,
decides that he wants to call a BBS that is on the same frequency
as the one you're using. You are too far away from him to allow
for your ground wave to hear. Also, the ham is too short away
to allow for reflection to work to the other ham.
He will think the frequency is free and start using it. You won't
hear him himself, but you will hear the BBS kicking in because that
will kill the QSO you were enjoying so much.

Moreover, a crouded area will stimulate people to use the most efficient
modulation method instead of a 7911 in bell103 mode.

There is place for robots, but watch for human-made signals. It's
so easy to disturb them!

Bottom line: automated stations should have a limited area where they
can work.

This may not be in line with the original request, but I use 1 1/4"
galvanized steel fence top pipe for many of my installations. This
is available at the home owner's supply in 10' lengths for about $5-6 each.
Or you can get it in 20' lengths if you look around.
Other possible mast material include 2" irrigation pipe, 20 or 30' lengths,
various electrical conduit and plumbing stock, and always check your used
scrap metal outfits. Quotes from industrial aluminum tube suppliers for
single items will always pop your eyeballs as they are not interested in
small orders.

>Thanks in advance!

>73 XE1RGL

I have been using a TH-78A for over a year in the Orange County, CA.
area, also an RF nightmare, and I am quite pleased. Yes, there is an
intermod problem, but it seems no worse, and sometimes better than
other comparable radios. I really like the alpha-numeric display, I
don't remember systems by frequency well. :-) I travel frequently with
the radio and it has put up with me rather well. It does not like to be
dropped though :-(There is a chip capacitor that can be knocked of the
board in a good drop, causes loss of audio on one side of the radio. Of
course, the radio should not be dropped. :-)

On the good side, since either side of the radio can operate either 2m
or 70cm, one side out is recoverable in an emergency. I like the
redundancy factor.

There have been several postings about bad service from manufacturers,
I can not complain about Kenwood at all. They have done well by me. I
had the "old" microprocessor design when I bought the 78A, and sent it
in for the "new" microprocessor as soon as it came available (anything
you buy now should have the new design, fixes a glitch in the call
memories). They turned it around in under two weeks. They fixed the
problem caused by a drop in a couple of days. They target 2 weeks or
less most times. Joyce, at the counter, is also their QC person for
service and she does a great job. She also just got her ham ticket,
anyone calling them in Long Beach should congratulate her. :-)

I have played with the FT-570 some, and still like the 78A better,
mostly for the display. I use it to monitor public safety (I work with
a volunteer group associated with the local constabulary) and have used
the aircraft receive as well. The games are nice I suppose, but I have
only used that undocumented feature in a very boring airport waiting
area after I finished my book.

That's my .02 worth. Good luck!

1400. What kind of mast and where to buy?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 00:48:26 UTC
From: little@nuts2u.enet.dec.com
Message-ID: <1993Aug31.224913.2607@nntpd2.cxo.dec.com>
Source record: 277213

Maybe some of you budding structural engineers out there can tell me what I need in the way of a mast to support some antennas.

I want to put up:

Antenna	Wind Load	Height above support
KLM 30LBX	2 sq-ft	11 ft
Cushcraft 4218XL	4 sq-ft	7 ft
Cushcraft A50-5S	3 sq-ft	3 ft

The guys at Cable and Metal Corp tell me a 2" OD 1/4" wall 6061-T6511 aluminum mast will do fine. But they want $195 for a 15 foot mast. Texas Towers says their 2" OD 1/4" wall carbon steel mast will do it for somewhat less. But they're out of stock.

So what do I really need, and where is a good place to get it? Most places don't seem to carry masts.

73,
Todd
N9MWB

PS I know the above wind loads are a bit higher than the manufacturers specs, but only by rounding up a little.

1401. CMU-350 Help!!

Hi there.. My nice ex-pmr rig has died and I *really* need a manual or
circuit diagram for it. Can anyone out there help?

Its a ClearTone CMU-350 70cm synth rig with 10 channels.

I'll *gladly* pay eexpenses to get a copy or even a loan!

Steve

Er, excuse me, but 20 meter CW is from 14.000 to 14.350 MHz. You have the entire spectrum width of 350 KHz available. What seems to be YOUR problem?

(Standard disclaimers apply regarding class of license for some sub-bands.)

Randy et.al., i agree, it's too much!!!!!!!!!!

i spend 99% of what little time i have on 40 Mtrs and QRP. here is the history
of 40 from my years on my favorite band - as i know it: (nite hours)

1955-1960: 40 meters good band.
7.000-7.200 cw
7.100-7.150 rtty
7.200-7.300 am then ssb

1961-1970: 7.000-7.075 cw
7.075-7.100 rtty
7.100-7.300 foreign broadcast

1970-1980: 7.000-7.075 cw
7.075-7.200 rtty es foreign broadcast
7.200-7.300 foreign broadcast es ssb

about the same for the next decade, but digital starting up

1990-present: 7.000-7.040 cw
7.040-7.150 digital es rtty
7.100-7.300 foreign broadcast

7.150-7.300 some ssb between the foreign broadcast

now we have dx ssb from 7.000 to 7.060
digital from 7.000 to 7.150
foreign broadcast 7.100 to 7.300

hey guys. let's admit it. we're about to have this band ruined and this winter is really going to be interesting. the propagation is already long. listen til 9 or 10 am local time. i'm hearing ja's and the middle east running 599 (and that's not a contest exchange) with very strong signals.

down in the southern US, we've got XE ssb stations down to 7.000 MHz. we've got digital stuff to 7.060 and i've heard dx digital down to 7.020. for thirty-five years, since my novice days i've moved from 7.150 down the band. i stay above 7.025 to keep from clobbering dx chasers. i can't go above 7.060 because of the digital. it's getting more and more crowded in the small frequency range left. don't get on CW ops case about the space allocated!! the digital stuff is everywhere now. remember A1 transmission is allowed anywhere within the allocated spectrum for radio amateurs. due to gentlemans agreement, you don't hear us moving up into the "phone subbands". don't start the flame wars. we all have our favorite modes. remember, the bicycle is still around. it hasn't been outlawed, yet i see a lot of people with the attitude that A1 should be outlawed and/or taken off the bands. you'll take my cold dead hands from my keyboard and/or kent or bencher.

just because a mode takes more spectrum, doesn't mean you should get all the band space you need. every bleeding liberal thinks that we outta give the spectrum away. it's a resource, not a gift.

somebody tell me! what joy is there in having a station completely computer controlled and unattended sitting on a frequency (heaven help us if they start vfo controlled operations) and racking up the qsos? i can do the same thing on the internet or using the fax machine. most of us work with computers all day. don't you wanna get away from them????

it's late. i'll go home and listen to 40. i'm hearing some)(@#$&& around 7.058 or so that i don't know what it is. someone know what i'm talking about?

ok, sorry, off the soap box. flame suit on. beam me up Scottie.

His only problem is that he is a nice guy. He doesn't push his weight around
in the phone bands (as you said we COULD operate there, but chose to be nice
guys). He doesn't fight with the RTTY crowd, the slow-scan TV, the digital
crap. We just want a clean slice of the spectrum to do our thing.

Yes, CW is ALL of the ham bands, but we don't push it. I haven't listened
to the phone bands in a long time. How is the crowd control doing????
Hearing a lot of four letter words lately???? Remember when it was
illegal????? Not a very nice picture to paint for the youth of today,
is it? Wonder why gangs are in your neighborhood? OOOOps. sorry,
starting to sound like Wayne Green..... :-) Sorry Wayne, i'll let you
have the soap box back.....

>don't seem to carry masts.

Todd, you don't mention what wind survival speed this mast needs to tolerate. But for anything short of a hurricane or tornado, good old 1.5 inch galvanized water pipe should do for your application. That pipe has an OD of very close to 2 inches, giving a 1/4 inch wall thickness, and works fine through the top section of Rohn tower. A 10 foot piece should run about $20 at the local plumbing supply store. Lengths up to 20 feet are stock items. Note that water pipe is specified by it's ID, not it's OD.

For a really large antenna, 2.5 inch oilfield line pipe works great. This stuff is extra heavy wall to allow for the corrosive liquids being carried. I've used it to build complete tiltover masts up to 60 feet. It's often free from your friendly oilfield service company. Pump rod is also wonderful bracing material, and also often available for the asking. For long spans of pipe, welding a pump rod brace to the pipe can stiffen it tremendously.

Now water pipe is heavy, and with the modest square footage you intend to hang on it, heavy wall 2 inch electrical conduit would work too. It's not nearly as strong, but should suffice for a wind load under 10 sq-ft. Don't think of using thinwall conduit; it'll bend if you look at it funny. Muffler pipe is similar, and I know hams who mount their small antennas using a stick of that in 2 inch. Conduit is available at most electrical supply houses, and muffler pipe is available at muffler shops.

In any case, their prices are much lower than those of the antenna mast manufacturers. For heights above the bearing of under 10 feet, it should be adequate for your modest needs. Now if you were trying to support a 3 element 40 meter beam, you might be justified in paying the outrageous prices of the mast manufacturers. But for ordinary tri-banders and VHF/UHF arrays, water pipe is fine. For smaller antennas, conduit or muffler pipe is fine.

>I'd prefer to see the various government agencies allocate the bands to
>amateurs without discriminating between modes, with the amateurs themselves
>establishing the subbands for various modes.

Amen Bruce! CW is allowed everywhere on every band, but we don't see
that being abused, much. The CW users tend to congregate near the lower
band edges despite no rule requiring them to do so. It's just a
gentlemen's agreement. Similarly, we can deal with other mode usage
by adherence to our informal band plans. The Canadians seem to be
doing nicely with no formal mode limits at all. US hams have developed a
regretable tendency to demand Big Brother manage their affairs rather
than taking the responsibility to do so themselves. That's a shame,
and inhibits the dynamic allocation of resources a rapidly changing
technology requires.

I continue to find it rather ironic that some users of "the mode that gets
through when nothing else will" are the ones complaining about possible
interference. The CW only segments are vast empty wastelands by comparison
to the HF General phone segments, yet it's a few CW ops who are screaming
about possible interference. I say "get a grip" and develop some sense of
proportion. CW ops currently suffer the least interference problems of
any operating mode, and only they have the empty space available to skrunch
over a bit to accomodate other spectrum users. They shouldn't be piggies
and demand 1 kHz guard bands on their transmissions. Nobody else has that
luxury. Buy a filter, or reprogram the wetware to cope like the voice
users have had to do.

I suspect that some may fear a repeat of the AM/SSB wars of the 50s
where the more useful mode wins out after a period of voluntary sharing.
And they secretly think that theirs is really the less useful mode. Thus
they feel the need to demand government protection as an endangered species.
That certainly goes along with the continued defense of the special status
of Morse testing in the exam system, but I digress. :-)

>* With atmospheric skip: 1200 km (at a good time !)

This might be interesting to post to one of the .radio.amateur groups.
From my limited understanding, the 10 meter band can be worldwide when
atmospheric/solar conditions permit. Since CB is ca. 11 meters, I assume
the same applies.

A couple of years ago, I was stuck out in the desert in California with
vehicle trouble way out in the tules. I tried in vain to get help with
my handheld CB... Interesting, I could hear a lot of (almost entirely)
Spanish speaking stations. I wonder if these weren't stations working
above the US legal limit in Mexico (300 km away)...

The N8EMR Ham bbs is online to serve the needs of the
amateur radio operators..

HOW TO ACCESS THE N8EMR HAM RADIO TELEPHONE BBS !!!

System Name: N8EMR
Phone: 614-895-2553
Login: hbbs
Modems: TB2500 PEP/V.32 support
Times: 24hrs
IP Address: 44.70.0.1
Amateur radio annonymous ftp access is available via the ohio
netrom/ip network. CMHIP is the Netrom node Id and is known
by most of the nodes in ohio. (its slow but it works)
This is only via the ohio packet network. This sytem
is not available via the "INTERNET".

To access the system via the dialup, at the login prompt type hbbs
(lower case only), you will then enter the BBS program. Follow the
directions from the bbs prompts.

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload Here is some of software that is available
for downloading.

NEWHAM area. Pick the tools you need to become a ham
AMSAT news and satellite keplerian elements
KA9Q TCP/IP Software for various computers,

EMAIL CALLSIGN SERVER
US CALLS ONLY

For those who do not have telnet access to marvin or one of the other
Internet callsign servers here is an alternative.

N8EMR's Ham BBS, 614-895-2553 has an email server up and running.
The Server is based on Buckmasters Spring 92 database.

------------------------ INTERNET AND CIS USERS ------------------------------

Mail should be addressed to
callbook@n8emr.cmhnet.org

If you have a well behaved mailer or a well know return address
the reply path will be taken from your mail header. If you have
a strange reply path or non standard reply path. You can use the
option REPLY line to specify a return path. Please note about %20
of the people using the server in the last year have not received
replys due to bad return paths.. Use the REPLY line when in doubt.

On the Subject line include a list a call signs to lookup. If your
mailer doesnt generate a Subject line you can use the option CALL
to specify a list of callsigns. All other lines and info are ignored.

E.G.
mail callbook@n8emr.cmhnet.org
REPLY user@site.domain (your reply path, ! or @ format.)
CALL n8emr w5rrr (list of calls, space seperated)
^D
#

------------------------- PACKET RADIO --

Mail should be sent to CBOOK@N8JYV.#CMH.OH.USA.NA
You MUST use both the REPLY and CALL option lines.
The REPLY line should be as follows n8jyv!HOME_BBS!CALL, where
HOME_BBS is your local packet bbs where you would normal pick up
your mail, CALL is your callsign.
You must include the n8jyv! in your reply path.. Packet mail will fail
without this.

E.g.
SP CBOOK@N8JYV.#CMH.OH.USA.NA
Subject ^M
REPLY n8jyv!w8cqk!n8emr

```
CALL n8emr w1aw
/EX

---------------------------- OPTIONAL COMMANDS ---------------------------------

REPLY This is an email address you would like to send the lookup info
to. Either Internet @ or ! addressing is fine. When in doubt
use this option. About 20% of the server fail with bad address
if you dont use the REPLY line.

CALL This is a white space separated list of callsigns you would like
to lookup. You can have more than one CALL lines in your text.
```

>of time... ;-)
>
I did wonder whether to put in a footnote about that, but I decided not to enlighten anyone :-) The word 'coach' can be used to describe the trainer/ teacher for sports teams, although the team manager is usually a different person. We also make the distinction between a 'bus' and a 'coach' as being slightly different forms of transport (a 'bus' tends to be public transport and a 'coach' tends to be privately hired for an event).

Half the fun on here is dealing with the difference between English English and American English (and any other variants which appear from time to time) You will notice that I use English spellings as well :-) (licence, colour, neighbour etc)

Dave

I took the new tests for Novice and Tech. I studied from the old ARRL texts. I had no trouble. However, I _did_ get a copy of the pools and go over them. One thing I noticed in the new pools is that all those questions about the polarization of quad antennas are gone. Also, I noticed that some of the questions have had the answers reordered on the test. What was a is now c and etc. Good Luck.

Ted (Also waiting. 6/14!! ??? @@@)

1418. XV7 DXpedition info ?

Newsgroup: rec.radio.amateur.misc

> With semi-automatic stations, this is no longer possible.

The semi-automatic station needs some kind of an intelligent squelch, which can tell if some information was exchanged on the frequency just prior to the connect request. The squelch should not respond to the general QRM or constant birdies. It is not hard for a DSP filter to recognize a CW signal or RTTY/AMTOR signal (which is just two CW signals 170 Hz apart). There is no need to try to decode these signals, the spectral signature and some statistical characteristics should be enough.

This should be quite easy to implement if the semi-automatic station is in a CW/RTTY/AMTOR sub-band. It is much harder to automatically distinguish between speach and general QRM.

What should the semiautomatic station do, if it receives a connect request while the frequency is in use (being used within 1 minute??).

Here are some possibilities:

1. Do nothing. The problem is that the requestor will constantly send connect requests causing extra QRM on the band.

2. Send a short "busy" message. If the requestor is intelligent, he will wait a few minutes before trying again. This is a minor nuisance to the on-going QSO than that the semi-automatic station starts sending out long messages.

3. If the semi-automatich station has many frequencies and one of them is on an empty frequency, it can send a short "QSY to nnnnn" message to the requestor at the original frequency.

This kind of intelligent squelch will reduce the interference problem but not eliminate it. The problem is to set the decision level so that the transmission will not be blocked by general (and local) QRM and on the other hand if the decision level is too high, too many on-going QSOs are interrupted. This decision level has to be set up case by case and requires a lot of experimantation by the owner of the semi-automatic station.

```
Posted-By: auto-faq 2.4
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.4 04/25/93 23:02:45
Changes: pit-manager.mit.edu is now rtfm.mit.edu

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called StratComm) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
Called "Elmers" because they are usually older and wiser, having the
```

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 4 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)

AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

++

Steve Sternitzke, NS5I

sds@sat.datapoint.com

I work with the W5YI-VEC organization ("official" title - assistant VEC)
and I write the VE manuals for W5YI. Add my name to the list of people
who are available to answer questions about volunteer exams, FCC
policies (as related to hams), the licensing question pools, etc.

++

Dave Stine WA2JTA/6

My areas of expertise are:

- vacuum tube amps, receivers, exciters
- CW operating tips
- wire antenna tips, hints & kinks

++

David Stockton, GM4ZNX

dstock@hpqmola.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

1424. Capacitors in Antenna Traps

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 11:18:24 UTC
From: norton@joker.optics.rochester.edu
Message-ID: <NORTON.93Sep1111824@joker.optics.rochester.edu>
Source record: 277079

I was planning on putting together a 4 band dipole antenna which
was convered on pg 7-11 of the ARRL Antenna Book. The author refers
to the Centralab 857 27pF transmitting type ceramic capacitor. What
is a transmitting type capacitor??? Is it possible to get some
equivalent at radio shack? I would hate to order by mail from
Centralab just for a capacitor.
Please write email to norton@joker.optics.rochester.edu
Thanx!!
Scott Norton

1425. Non-licensed purchase of radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 11:24:53 UTC
From: mellis@ramcad.pica.army.mil
Message-ID: <CCoADI.GwD@pica.army.mil>
Source record: 277151

I'm in the process of studying for the Tech license. but I noticed in a previous post someone mentioned that the Radio Shack HTX202 is on sale for $200. I thought I'd get it now, and listen in on popular freqs around the Rockaway (Northern) NJ area. That way when I do pass and get the license, I'll be a better operator for listening all this time. After all, isn't that the best way to learn? By the way, what ARE the popular freqs (2M) in the Northern NJ area ? :-]

My question is: If I walk into Radio Shack, put money down, and say: "Gimme dat HT-202, and I'll give you this money", can (would) they ask to see a license before selling it to me?

On the bottom of page 28 of their 93 catalog, it states:
YOU MUST HAVE A CURRENT FCC AMATEUR LICENSE OF APPROPRIATE CLASS TO TRANSMIT WITH THE HTX-100 and HTX-202.

I would think re-iteration of the above would be all RS should do, since the ultimate responsibility is mine to abide by the rules.

Comments? Experiences?

There are probably as many different 10 codes as there are
organizations using them. Most public safety versions that
I'm familiar with use 10-8 as "Available" or "In Service",
neither of which makes much sense in the context.

NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO

Don't do it. Do NOT use fence pipe, irrigation pipe, or other material
not designed to handle stresses of supporting antennas.
Either high strength aluminum or treated and tested carbon steel is the
only safe way to go. I have too much money invested in antennas to
risk them to cheap excuses for pipe. Please, spend the money for a
strong support and you won't have to explain to your spouse or landlord
why your antenna is now buried in your roof. 73, Tom WB4IUX

i am from india, have yet to work anyone there in the short period
i have been on air. i know vu2ttc, "chak", who is one of the most
active hams in south india. he is a retired school teacher. he is
also an elmer, and is always ready to help, even though he is blind.

yup, it does not have anything to do with 1d3 suffix, but you see
references to vu2 so rarely on the net, i couldn't resist :-)

1431. DXCC Country List

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 14:29:06 UTC
From: wmb@ulysses.att.com
Message-ID: <1993Sep1.142906.19401@ulysses.att.com>
Source record: 277153
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The current ARRL DXCC country list follows. Recent changes include
the addition of Macedonia (Z3) and prefix changes for Bosnia-Hercegovina
(4N4 -> T9), Yemen (7O -> 4W), Eritrea (ET2* -> E3*@, a likely new one),
and the former Soviet Union: Armenia (UG -> EK), Azerbaijan (UD -> 4J),
Belarus (UC -> EU), Georgia (UF -> 4L), Kazakhstan (UL -> UN),
Kyrgyzstan (UM -> EX), Moldova (UO -> ER), Tajikistan (UJ -> EY),
Turkmenistan (UH -> EZ), Ukraine (UB -> EM), Uzbekistan (UI -> UK).
The primary prefixes shown for some of the latter countries were selected
somewhat arbitrarily from their new ITU allocations and may be incorrect.

This list is available via
- occasional Usenet posting.
- ftp from ftp.cs.buffalo.edu (as pub/ham-radio/dxcc-k2di).
- email from the ARRL Information Service -- send a message
containing the line "send dxcc-k2di" to info@arrl.org.

Much of the information was provided by Ron McConnell, W2IOL. His
detailed geographical listing will also be available via ftp from
ftp.cs.buffalo.edu, and from info@arrl.org ("send dxcc-w2iol-inst",
"send dxcc-w2iol-a-p", "send dxcc-w2iol-q-z").

The colon-separated fields are:
1. primary amateur prefix
- "*" suffix for deleted countries
- "@" suffix for likely new countries
2. country name
3. continent(s)
4. ITU zone(s)
5. CQ zone(s)
6. time zone (hours from UTC)
7. latitude
8. longitude
9. ITU prefix allocation(s) ("~" suffix for unofficial)
10. other amateur prefixes

Please mail corrections and suggestions to me.

Bill Brelsford, K2DI
AT&T, Basking Ridge NJ

>either automatic, semi-automatic, or fully automatic. I am willing to
>let these issues be decided by those who do, believing that the amount
>of interference to me will be the same whether the interfering station
>is CW, RTTY or SSB.

I generally agree with Ed. However, not all interference is the same.
There are differences in energy concentration, necessary bandwidth
for communication and the availability of tools for separating out
unwanted signals.

A. Availability of tools: for starters, same mode interference is harder
to deal with because it is harder to separate the signals.
Consider the following cases:
1. Someone (not you, ED or I :)) is operating SSB and is interfered with
by a CW signal. The operator reaches over and flips on the auto-notching
W9GR unit.
2. I am operating CW on the bottom portion of the band and I am interfered
with by a SSB station. I switch in my super narrow filter and continue
my QSO.

B. Energy Concentration: Digital mode signals are at their peak energy
for a longer time and for the same peak level, the average energy
level is higher than SSB and CW. This makes them harder to live along
with.

C. The radiation pattern required for some digital modes do not lend
them to spectrum sharing. Based on my understanding of AX25 protocol,
unless there is a well defined and *followed* cell, a HF packet
node would need an omnidirectional antenna with high ERP. This
would be needed to reduce collision and keep the channel efficiency up.
Not the friendliest of signals to share spectrum with. Such nodes
can interfere with a larger number of stations.

From a "rule-making" perspective, I would be concerned about B and C above.

In article <CCoADI.GwD@pica.army.mil> mellis@ramcad.pica.army.mil (Mark Ellis) writes:

I'm in the process of studying for the Tech license. but I noticed in a

Amateur radio is a great hobby and a great way to volunteer your time
and expertiese in the service of your community.

previous post someone mentioned that the Radio Shack HTX202 is on sale
for $200. I thought I'd get it now, and listen in on popular freqs around
the Rockaway (Northern) NJ area. That way when I do pass and get the
license, I'll be a better operator for listening all this time. After

Good idea Mark. Listen carefully for -good- operators and vow to emulate
their best characteristics. You won't likely find any one person who
exemplifies all the best of amateur radio, but you'll probably find some
good in nearly everyone. You will NOT find the kind of stuff you read
here on the internet. This is a rather small subset of amateurs made
up largely of professionals and students. Not too many retirees, homemakers
or barbers on the internet (too bad). Not too many CB good-ol-boys either
(thankfully).

all, isn't that the best way to learn? By the way, what ARE the popular
freqs (2M) in the Northern NJ area ? :-]

My question is: If I walk into Radio Shack, put money down, and say:
"Gimme dat HT-202, and I'll give you this money", can
(would) they ask to see a license before selling it to me?

On the bottom of page 28 of their 93 catalog, it states:
YOU MUST HAVE A CURRENT FCC AMATEUR LICENSE OF APPROPRIATE CLASS
TO TRANSMIT WITH THE HTX-100 and HTX-202.

I would think re-iteration of the above would be all RS should do, since
the ultimate responsibility is mine to abide by the rules.

There is -NO- law that stipulates you must be licensed to own an amateur
radio. There -is- a law against transmitting with it. If you are the
kind of person that has a hard time resisting temptation then maybe
having the radio in your hands before the license may be a bad idea. If
you can resist the temptation then it's a good idea. The choice is yours.

Good luck with the studying and the tests. Let us know how it all
turns out.

Just out of curiosity, I was down at the local Radio Shack and asked the manager about people who buy components. He indicated that his store (in the center of Provo, UT) is the most profitable in the region _because of component sales_. However, this is only because the local clientele tend to just come in and buy the components and would rather not be bothered - so he doesn't bother them. He did have one person who worked for him that was technically competent and it was a problem because someone would come in and start asking about components and use up a half hour of the salesman's time and walk out with a $2.00 capacitor. They usually leave me alone when I go in because they know that I will only buy components - I never even look at the stuff they stick in the aisles to block your way. The nice thing about them is that they are open, the local "large" electronics store operates on a strict 8-5, M-F schedule and that is hard to connect with if you are working a regular job and the smaller store in the area has reasonable hours but doesn't have a real good stock of most items. I don't agree that we should boycott them - we just need to let them know that if we have questions we will ask - just leave us alone while we pick out the parts we need.

1436. Opinions on Alinco DR-600T

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 15:37:25 UTC
From: cyamamot@elroy.jpl.nasa.gov
Message-ID: <262fjl$35f@elroy.jpl.nasa.gov>
Source record: 277147
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Greetings!

I apologize if this is getting rehashed all the time, but rather than ask a generic "Which Dual-Band Radio is Best?" question, I'd like some opinions from owners of the Alinco DR-600T mobile unit.

I've narrowed my choices down to the DR-600 or the Standard C5608DA. I don't really like the "ergo" look of the Alinco but since I won't have room for my scanner in the car, I appreciate it's extended recv range. The C5608DA is appealing due to its remote LCD handmike which means no additional headunit to clutter up the dashboard/center-console.

Any comments about the Alinco's intermod rejection abilities or other likes/dislikes would be appreciated. Also let me know if you find the ergo shape useful/appealing/ugly/etc. and any comments about LCD contrast, backlights, button function usefulness. Of course if you can can convince me that Icom/Yaesu/Kenwood had fixed all the intermod problem reports I've read, that'd be food for thought.

Thanks & 73's
- Cliff (KA6JRG)

1437. 40 meters

Gang,

sorry, i was in a bad mood i guess.

went home and looked at 40 meters. remember kids, this was late at
nite and most OFs have gone to bed and even the young kids too. :-)

0419Z (0419UCT) - 40 meters - Yaesu FT-707 (outta the closet) and 80 meter
long wire up 10 meters and pointed north

dx cw signals - 7.0027, 7.0069, 7.0094, 7.0141, 7.0156, 7.0164, 7.0174 (CO8RCT
with clean signal), 7.0202, 7.0222, 7.0232, 7.0296, 7.0337,
7.0337, 7.0352, 7.0384, 7.0391, 7.0438, 7.0456, 7.0459, 7.0475
dx ssb - 7.0428, 7.0489

****here it is!!!*** 7.0500 - the continous warbble. it ain't digital that i
can tell. anybody out there in radio land know where
and what it is? sounds like a lot of power to me. 599c

digital stuff - 7.0615, 7.0678, 7.0701, 7.0745, 7.0867, 7.0942, 7.0976, 7.0990,
7.1015

NOW THE FOREIGN BROADCAST - 7.110, 7.115, 7.125, 7.135, 7.140, 7.150, 7.155,
7.165, 7.170, 7.175, 7.180, 7.185, 7.190, 7.195, 7.200, 7.205,
7.210, 7.220, 7.225, 7.230, 7.235, 7.240, 7.245, 7.255, 7.260,
7.265, 7.270, 7.275, 7.280, 7.285, 7.295 (most 20+ over S9)

heck, you don't need no stinking crystal calibrator. they've 'channelized'
the 40 meter band for us. the first six channels i have crystals for. :-)

i thought i left all you guys with the KW linears up there to hold the band
for us. guess you were out gunned!!! :-) no wonder everybody wants to
move us cw ops down and out.

question? can you do digital on one of these channels? interference too
much? let's allocate all the above channels to automated digital after
10 PM local time!! won't help. :-) one country, one vote when it comes
to frequency allocations.

i'll do another sample at regular intervals over the month of october
(i'll be outta town too much this month) at all hours. someone wanna
help with the other bands?

i don't think the CW bands are that empty Gary.

1438. 311 Vaccuum tube-need info

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 15:40:47 UTC
From: randy@cyphyn.UUCP
Message-ID: <1993Sep1.154047.69@cyphyn.UUCP>
Source record: 277177

A friend and I are making him a 25 w cw transmitter (with amplifier to
do 85 w) and for my self, a QRP #26 triode transmitter.
We ordered the tubes from Antique Electronics Supply.
If yer ready to have to make subs at the last min. they are AOK.

Here is what happened:

We wanted to make a nice cheap 85 w amp, so we chose the 211/311 triode tube.
The price was right for the 311, and it was listed as the same thing as
a 211, according to my ARRL Handbook's tube chart.
The tube arrived, but it's a 311A/B which is a Western Electric pentode
for receiving use! Apparently the A B suffix makes a BIG difference!

All I've been able to determine is that it is like a 24A.....or so it
seems:
Filament....2.5v 1.75a
Plate ......90...if not 135 or 180v
Screen......67.5 (I'd dare not go higher)
Bias........-1.5 to -3v or no less than 1000 kathode res.

Having seen and felt the tube, he doesn't have the heart to send it back
(and will reorder a 211 to get what we originally wanted) and so now
we have a 3rd project:
Make a regenerative receiver (Thrill box replica, home brew style) with it.

(Will be a near copy of my 6J7 version...I used to copy code practice on)

Before I go powering up the tube...I need to verify the Filament volts/current
-cuz I'll be using a dropping resistor in series, from 12v in order to cut
surge current to a safer value upon turn on.

Can anyone verify that? (2.5 V 1.75a)

Hi there everybody,

I will be going this month to the USA for a 4-week holiday. I am planning
to
take some HF and VHF/UHF equipment. I am planning to take a C-520 handheld
with a Kometh antenna stuck on a magnetic foot. The HF equipment will be a
barefoot FT-747 (this one is reasonably light), a glass fiber telescopic
mast
(approx 8 m (-> approx 26 ft) high), and an inverted-V dipole for 40/80
meters that I am going to use on all bands with a matchbox. Power supply
will be provided by the battery of rented cars. I will be operating
something like
W(n)/HB9IIL/P or W(n)/HB9IIL/M, mainly SSB.

I am just waiting for the reciprocal permit from the FCC, which I applied
for almost two months ago by now...

I will be in Florida in the period 12th-21st of September, and in
California from the 21st till the 9th of October. I do not have any
operation hours or any frequencies to announce for the moment, however feel
free to give me a shout if you hear me.

I would be interested to know what is the best band and the best time of
day in order to make successfull contacts with Europe from Fla and Ca these
days (with a dipole only!), as I would like to set up some scheds with
other Swiss ham friends. Any hints are welcome!

Thanks a lot for any hints,

This is correct, although you should note that truly long-distance
contacts are possible on a regular basis only when the sunspot cycle
peaks.

Unfortunately, we're on the downside now. :-(

It's entirely possible that you heard Spanish speaking stations running
the legal limit. (4 watts?)

>15 weeks total.

>This any kind of record?

I received my Novice ticket in summer 1969 and upgraded to General in
December 1969. I thought about upgrading a real whole lot for a long
time until February 1993. Then I took 1C, 4A, and 4B (and passed).

That's 23+ years which beats 15 weeks by a gosh darn lot!!!!!!

It just torques me to no end, however, that I had to study up on
such topics as complex impedence and the band edges up near 1GHz when
all I wanted to do was have some QSOs in the bottom 25KHz of several HF
bands. :^)

1445. 11 year old with an interest in Space

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 18:15:10 UTC
From: Jim Jaskie <jim_jaskie@tempeqm.sps.mot.com>
Message-ID: <1993Sep1.181510.19478@newsgate.sps.mot.com>
Source record: 277084

Hi. I have an 11 year old boy that is very interested in SPACE (well, mostly Star Trek). I would like to use that enthusiasm and encourage it by building (with him) an amateur sattelite Rx/Tx (maybe EME?) station out in the barn. This is meant to be a learning experience for him, not a hobby for me, which complicates it somewhat. I can get involved in all sorts of fool things and enjoy it. I need to balance his understanding and interests. This balance never seems to be easy.

I've been going through the ARRL Handbook and the ARRL antenna book, but I have no familiarity with the amateur satellite community and the "normal" ways of doing this. Anyway, this is what I was thinking about trying. I'll get a radio (Yaesu 5200 ?) and a high gain antenna. Something like a Cushcraft 26B2. I see "satellite antennas" for sale, though I don't know why they are different. I assume I will need to mount this antenna on a rotor, though I have no idea yet about what type of rotor (any rotor in the AES catalog?). He would help me put this together and mount the antenna, and then track the satellites. This setup should allow us to then make contact with satellites (including MIR?) and maybe even try some EME. Does this seem like a reasonable way to set this up? Any better recommendations? Reference sources or national clubs with magazines? I'd appreciate any help that you can give me. I'd like to see my son become excited enough to start studying for his license.

Thanks,
Jim

>

I just got my ham ticket a couple of years ago, and I find your post quite enlightening, Chuck. I certainly had noticed a major discrepancy between the "gentlemens' agreement" discussed in the introductory ARRL book and what I was hearing at the lower end of 40 meters. Maybe I just wasn't listening before, but it seems to me that even two years ago I never heard SSB signals from 7.025 - 7.040. More recently I do hear them, and they always seem to be from South America I think (spanish).

In the ARRL publication it's stated that the purpose of the gentlemens' agreement is to avoid chaos on the band; the implications of "de-regulating" the HF bands will include increased interference with its attendant rudeness, increased difficulty in establishing and keeping scheduled QSOs, and more intolerance for those who don't use the "correct" mode. Actually the intolerance is probably there already, but with the modes segregated into distinct subbands we don't have to listen to the modes we don't like ;-)

>....

>our favorite modes. remember, the bicycle is still around. it hasn't
>been outlawed, yet i see a lot of people with the attitude that A1 should
>be outlawed and/or taken off the bands. you'll take my cold dead hands
>from my keyboard and/or kent or bencher.

I can't agree with this...I have never heard anyone with the attitude that A1 should be banned from the air. I think you just wanted an excuse to use the trite "cold dead hands" phrase ;-) I do agree with you on the last, though...and at 33 yrs old I'll be around a while to make sure A1 survives on the bands for a few more decades.

But preserving a particular mode is not the point here. The point is that we need to keep some semblance of order on the HF bands, or they are going to become unusable for everyone. Semi-automatic operation is clearly a step in the wrong direction, as it allows interference to occur. Even though

such interference is not *intentional* interference, that doesn't make it OK.

There may be some interesting irony in the works here for the digital folks:
If the band gets so trashed that interference becomes the rule rather than
the exception, and since Spread Spectrum is not allowed on the HF bands,
then the A1 mode will probably become the most reliable way to communicate
over HF!

I use LOGWIN by WA1W. Great for logging, DXCC Award tracking, Packetcluster
interface (spotting, capturing spots) and rig control. It is also the
lowest priced Windows based logging program I've seen.

I bet if you cut the White wire from the PK232 to the rig (AFSK) and use
the FSK OUT on the PK232 to your FSK IN instead on your rig, the problem will
dissapear. That's what I did on my PK232 <--> TS850. Besides, FSK is better
for digital than AFSK.

Possible, but he was most likely hearing all the linear jockeys south of the border (most of the big guns seem to be in South America, from what I can catch of their rapid-fire exchanges (a hallmark of the Brazilian operators seems to be the 5-syllable-or-less transmission)). They refer to 27.065 as "The Quiet Channel" because when all the U.S. linear jockeys are polluting all the other channels, there are relatively few gringos on channel 9. Unfortunately for those of us who try to monitor 9, on most days we can't hear anything for the S9+ signals coming out of the south (and these guys aren't running 4 watts, either). Take a listen sometime and you'll see what I mean.

listening before, but it seems to me that even two years ago I
heard SSB signals from 7.025 - 7.040. More recently I do hear them,
and they always seem to be from South America I think (spanish).

You have to realize that 40 meters is a sticky proble (as is a small
segment of 80). Most of the world doesn't have any 40 meter amateur
privs where we have our SSB segement, so they have to use SSB down there.
It's just that in the US, we're not allowed to work SSB down there.

In the ARRL publication it's stated that the purpose of the gentlemens'
agreement is to avoid chaos on the band; the implications of "de-regulating"

Of course it took years for the ARRL to adopt their own gentlemens agreement
and get the code practice out of the RTTY subbands.

>David, AD4HM

Probably not. At my first test session in late January 1991 I passed
20 WPM and theory through General. At my second session in mid-March 1991
I passed the rest of the theory (through Extra). My General ticket arrived
a week later.

I've heard stories of people who did it all in one sitting. The stories
I've heard involved people who were already licensed in another country
or who had been licensed previously in the U.S. and had let their ticket
lapse. I don't know if Extra-in-one-sitting has ever been done by anyone
who had never been licensed before. Probably.

1454. Call for public input to the Advanced class question pool syllabus

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-01 19:56:15 UTC
From: bjahnke@arrl.org
Message-ID: <2160@arrl.org>
Source record: 277165

On July 1, 1993, the public input period for contributions to an update of the Advanced class question pool *syllabus* began. Public input is invited through October 31, 1993.

Now is your opportunity to shape the future Advanced class examination.

What topics do you believe require attention? Should new technologies be added? If so, which ones?

Are areas over emphasized? Flat out wrong?

Remember, after the new pool is formulated using this syllabus, we will be using it for four years.

Direct your Element 4A syllabus material to the National Conference of VECs QPC Chairman Ray Adams, N4BAQ, with copies to Vice Chairman Fred Maia, W5YI and me through my Email address:

bjahnke@arrl.org

Thank you, in advance...

73,

Bart J. Jahnke, KB9NM
Manager
ARRL/VEC
&
QPC Member.

Yep, most probable.

You said you got all of the code at once, and I know plenty of people who have done all the theory at once, although I don't know anyone who has done them both. They probably are there though.

Anyone need a computer for Packet? I have two Heath H-89, and one H-8 computersthat I need to get out of my house, wife says OUT! These computers run a system from a floppy disk. They are NOT compatible with anything else in the world. If you have some programing experience, or want to get some, this systemis for you. I have a DOS system and also CPM. I have Basic, Cobol, and Assembly language assemblers. The H-89's are Z80 based, the H-8 is 8080. These systems are ideal for a Packet/logging system for someone who wants to play with software. I have pounds of documentation that will go with the systems, along with all kinds of software and utilities. The H-89's are terminals with the CPU built-in. The H-8 is a standalone CPU with expandable card cage. These systems provided a real learning experience for me, they are not for everyone, they are not turn-key, but I will let these go CHEAP. If you got the time, I got the Packet Computer for you. First person gets a shot at the best software choices.

David, not really, during the 1992 HAMVENTION in Dayton, a guy passed all five class that day. He was serving in a rescue Christmas Eve of a small plane crash in which a family was involved. He found a small child from that crash and trying to give her CPR (she was about 18 months old) a rescue chopter was flying over head, but could not see him because of the fog and he could not communicate with it to get assistance with the radios issued to the firemen, and he made a vow that night in memory of the child that died in his arms that he would make his department better, that they would be able to communicate with other mutual assistance groups, so he studied hard, got his licence, learn the code in a realy short time. By the way, he works full time, is a volenteer fireman, and a hero in my eyes.

|This any kind of record?

There are people (I know one personally) who have come into one session and
passed 20wpm and all five written elements. Their first and only
licenses were Amateur Extra (to give the class its proper name).

When I was taking my Tech theory test there was a guy who finished his
extra (both the theory and code) and he didn't have his ticket yet.
I think he took 3 sitting in about 4 weeks to do it all. I also remember
the VE talking about a guy who came in once and passed everything but extra
theory in one sitting, missed that by 2 questions. I don't think he had
any previous radio experience.

Well, they say CB is dead with 10 meters is good.....probably because on
10 meters they want to hear stations all over the world....but CB'rs don't
much care for hearing all stations around the world on their channel.

I'm looking forward to upgrading from Tech Classic to General sometime soon, but I can't find my original FCC license to take with me to the exam. I have a photocopy that I carry with me, but not the original.

What am I to do?

Can I get the FCC to issue a replacement original, or will the examiners most likely accept a photocopy anyway?

Well Gee, I didn't think someone would put their DX LongJohn up with the
stuff. I don't even think I could clamp it into my TH3 Thunderbird, its
probably too small. But I have a 2 meter Ringo Ranger up on a 20'
section of fence mast and its been mounted on top of a 60' Cedar tree for
3 years. I'm now mounting a 2 meter Isopole up another tree in the same
manner. The Ringo-Isopole shootout will begin soon!
I did have a 4 pole 440 array on one of these trees that stuck out the top
more than 10 feet. A strong SW wind came along and bent the fence pole
in a smooth curve until my antenna pattern was skewed about 45 degrees.
We'll see if the Isopole outlasts the Ringo in terms of wind loading.

Probably not, only other CBers want them. Besides, it
doesn't say that the person actually used it on the air,
it quite OK to own it. It's called The American Way.

If anyone knows of even one case where it has been worth
reporting stuff like this, let us know. Meanwhile, I
suspect it's not worth the cost of a stamp to tell them.

Well, the manufacturers make tradeoffs that result in higher current consumption for base station radios:
- improve front end by having large collector currents
- high power lo inputs for better intercept point from mixers
- linear stages with higher zero signal currents - this would be for rf and audio stages
- all the embedded controller/digital goodies, blinking lights and so on and so on.

The third point is especially valid for the RF Final which are biased for 100W output while maintaining some semblance of linearity. If the power is reduced by just changing the drive, leaving the bias of finals as is, there will be a very high zero signal current in the finals that will only serve to heat them.

The ARRL publishes a halfway decent directory once a year; it comes
out at the Dayton Hamfest in April. You can get it directly from the
ARRL or at local radio weenie stores.

Some repeater coordinating bodies offer directories too; in Norhtern
CA the NARCC directory is a better one that the ARRL book.

Well, the Split Rock club's got a repeater in Rockaway on 146.385+ (K2RF).

There are a few others, but your best bet's to check out the repeater
directory and also sweep the band looking for repeaters.

Steve

Hmm, 44,8 kHz, 20 QSOs, 2.24 kHz each. No crowding here, we could do this good on voice. :-)

>dx ssb - 7.0428, 7.0489

Didn't hear any foreign phone in this area tonight.

>****here it is!!!*** 7.0500 - the continous warbble. it ain't digital that i
> can tell. anybody out there in radio land know where
> and what it is? sounds like a lot of power to me. 599c

I heard it too, but it's about 554 here. I wouldn't give that warble a T9 note. It sounds vaguely like weather fax, but the rate's too low.

>digital stuff - 7.0615, 7.0678, 7.0701, 7.0745, 7.0867, 7.0942, 7.0976, 7.0990,
> 7.1015

And another that's sneaked up to 7.105 just below a bunch of Novices tooling along with some slow CW. Perhaps they were too slow for you and you just thought it was a bunch of people tuning up. :-)

I caught at least half a dozen stations on each of the frequencies you list, actually a little offset, save one which had RTTY. AX25 does allow channel sharing. I didn't hear any AMTOR tonight, and only one RTTY contact in progress.

>NOW THE FOREIGN BROADCAST - 7.110, 7.115, 7.125, 7.135, 7.140, 7.150, 7.155,
> 7.165, 7.170, 7.175, 7.180, 7.185, 7.190, 7.195, 7.200, 7.205,
> 7.210, 7.220, 7.225, 7.230, 7.235, 7.240, 7.245, 7.255, 7.260,

>
>i thought i left all you guys with the KW linears up there to hold the band
>for us. guess you were out gunned!!! :-) no wonder everybody wants to
>move us cw ops down and out.

Listen a little more closely on 7.275, nice big loud roundtable zero beat with the broadcaster. Also guys zeroed on 7.265, 7.285 and 7.295. Back in the days of the Evil Empire we used to park on Radio Moscow, but they're good guys now so we leave them alone and pick on VOA. :-) I didn't hear any amateur signals between 7.150 and 7.225, I guess only Generals have the skill to face the broadcasters. Could be all that training on 11 meters. :-)

>question? can you do digital on one of these channels? interference too
>much? let's allocate all the above channels to automated digital after
>10 PM local time!! won't help. :-) one country, one vote when it comes
>to frequency allocations.

RTTY and data aren't allowed above 7.150, but CW is. Maybe you could work 700 Hz off one of these carriers and dispense with the product detector. If data were allowed, I think we could tuck Clover signals on either side of the carrier. There doesn't seem to be much modulation on these guys below about 300 Hz.

>i don't think the CW bands are that empty Gary.

Well there's activity, but it's spaced like phone transmissions. Lots of extra room there for guys with 250 Hz filters or programmed wetware.

This was actually an interesting exercise. I haven't tuned 40 at night for years. I was really surprised at the lack of amateurs in the Extra and Advanced phone segments. All the phone ops seemed to be crowded in the General portion. During the day it seems the reverse is true. I guess the old guys don't have to work for a living, but do have an early bed check at the home. :-)

No, they'll sell it to you if you have the green. It's perfectly
legal for non-hams to own a transmitter, as long as they don't use it.
If the clerk is sharp (fat chance) he may caution you that a license
is required and try to sell you their training material. And there
are warnings on the box and in the manual that a license is required
to transmit.

>else than the bell202 modems on VHF, which were thought of as a stopgap
>in 1983 or earlier and should have been replaced many years ago?

No because the commercial manufacturers froze the technology too early
by including Bell 202 modems in their TNC products. It's a sad fact that
most amateurs just buy a box and use it. However, now that 9600 baud
add on modems are available commercially, I've seen a marked increase
in 9600 baud activity. Unfortunately, the hams are still using their
existing FM rigs instead of multimodes though, so the spectrum isn't
being conserved effectively.

HF *is* different. The hams already have the SSB radios, and many of
the HF forwarding stations seem to have jumped on the Clover bandwagon.
But the PK-232s and KAMs still outnumber the superior equipment. That
should change in time as the manufacturers begin to catch up with the
state of the art. No doubt though someone will still be banging on a
C64 with a digicom adapter in 20 years.

I guess we never should have begun to drive cars because they needed larger roads. I also guess we never should have begun air travel because we needed to hire air traffic controlers. Highschool should have been good enough, we shouldnt have invented college, because we have to pay more taxes.
GOOD GRIEF!

CW is a great mode, and it does has its advantages, but just because the ARRL is taking a stand for packet, dont have a hissy! These guys move lots of information around the world at 10 times the pace any cw operator could. Compare it to Ma Bell. There are no poor souls who sit at a switch board, manually stretching wires and plugging them into holes. Its automatic! Why should all of our data have to bottleneck at a traffic net where maybe only 8-10 people check in regularly using cw? Please!

Just because there is a process to allow semi-auto forwarding, there is NOT going to be an automatic influx of packet bbs's on HF. The same ones there are still going to be there, they will come and they will go, so let it be.

PS. I dont operate CW _and_ I dont miss an RTTY contest!

SB DX @ ALLBBS $RTDX0827
VK2SG RTTY DX Notes, 27 August
VK2SG RTTY DX Notes for week ending 27 August 1993 (BID RTDX0827)

A quiet Sun made this an exciting week for RTTY DX. In spite of a
Solar Flux hovering around 90, low A and K indices made for excellent
conditions supporting the SARTG contest last weekend, followed by the
appearance of Mount Athos and Nepal later in the week.

Our information this week came from 9X5LJ, CE3GDN, DJ3IW and the
Central Europe DX-CLuster Node DB0SPC, I5FLN, KE6XJ, WB2CJL, ZS5S, and
the NJ0M node of the Twin Cities DX Packet Cluster Network. Thank you
all.

Notes of Interest:
9N1HL by Henry, DJ6JC, was active on Thursday on 20m around 1100Z.
No reports of QSOs yet received. His length of stay is not known.

It is believed that SV2ASP/A made only six demonstration QSOs on RTTY,
two of which were with IK5KKW and PA0HVF. We anxiously await
additional activity from Mount Athos.

JT1CS and JT1/KB9IBZ should be signing from /JT3 this week until
2 Sept. QSL to JR0CGJ.

Wake Island, KH9, will be activated by a group from California Poly-
Tech 32 August-10 September. Callsign not yet announced. QSL to
OKDXA, P.O. Box 88, Wellston, OK 74881.

Nauru I., C2, will be activated by a group of Japanese operators
8-13 September, concentrating on CW, SSB and RTTY, 160-6 meters.
Callsign not known at this time.

Look for CY9R to be active from St. Paul Island 1-8 Sept. We hope
that, unlike the recent CY9CWI operation, RTTY will be activated.

For next week's bulletin, send your Bandpass and Notes of Interest
to Luciano, I5FLN @ ZS5S.ZAF.AF, OR I5FLN @ 9X5LJ.#KGL.RWA.AF, or
I5FLN @ CE3GDN.#STGO.CHL.SA.

>mount this antenna on a rotor, though I have no idea yet about what type
>of rotor (any rotor in the AES catalog?). He would help me put this
>together and mount the antenna, and then track the satellites. This
>setup should allow us to then make contact with satellites (including
>MIR?) and maybe even try some EME. Does this seem like a reasonable
>way to set this up? Any better recommendations? Reference sources or
>national clubs with magazines? I'd appreciate any help that you can give
>me. I'd like to see my son become excited enough to start studying for
>his license.

Well a couple of things to start off.

First go buy a copy of The Satellite Experimenter's Handbook. You'll be
glad you did.

Second the Yaesu 5200 is a dual band FM mobile if memory serves me
correctly (and if not, *someone* on this group will correct me.) FM is
only used on AO-21, MIR, the Shuttle, and some of the PACSATs. Also FM
will definitely *not* work for EME unless you're going to build one of the
worlds larger EME arrays, and even then it's doubtful. Plus no one else is
using FM on the moon.

A multi-mode multi-band rig would be a much better bet and with some
careful shopping of used equipment can be had for about the same price as a
5200. Personally I purchased a used Yaesu FT-726R for $650 and have made
numerous satellite contacts with it. Other fine rigs include the Yaesu
FT-736R, ICOM 970, or any number of single band multi-mode rigs for 2
meters and 70 cm.

If working MIR and AO-21 will satisfy your needs, then forget the remainder
of these recommendations as they are primarily aimed at allowing you to
work all the amateur satellites.

Third don't bother with the 26B2. That sort of gain is only needed on AO-10, AO-13, and FO-20, and even then, you'll still want circularly polarized antennas instead of linearly polarized ones like the pair of 13B2s that make up a 26B2. Purchase a pair of OSCAR twists from either KLM, Cushcraft, Hy-Gain, M-Squared, or probably any of several others. I like the long KLM's if you can afford them.

Since satellites either tumble, spin, or otherwise move around, maintaining like polarization with linearly polarized antennas is difficult. So most folks use circularly polarized antennas as the spin and other movement of the satellite won't change the polarization. This is why you see "satellite antennas"

Fourth if you want to work the world using AO-10 and AO-13, you should probably invest in a ~100 watt 70 cm amplifier unless your radio already puts out 100W on 70 cm. Any of the available bricks will do fine. Don't forget the power supply to provide the 12 V. If you're thinking seriously about EME, then look into a kilowatt or better amp for 2 meters and a couple of long boom yagis such as the Cushcraft 17B2s or M-Squared 2M5s, etc. Also a low noise preamp for 2 meters wouldn't hurt.

Fifth you'll need an azimuth rotor (normal side to side rotor) and an elevation rotor (allows positioning the antenna up and down.) Plus you'll need a non-conducting cross boom to support the pair of antennas.

Sixth join AMSAT and help support amateur satellites! They can be reached at:

AMSAT-NA
850 Sligo Avenue
Silver Spring, MD 20910

Seventh and last, have a blast. I've talked to people the world over on satellite and it's really amazing. Also, you can get by with less than what I've described above, but the above is a typical reliable OSCAR station.

73 es gl,
Todd

1485. Re: Radio Shack attitudes

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-02 12:39:54 UTC
From: macy@telemax.com
Message-ID: <CCq8IJ.44y@telemax.com>
Source record: 277036

A few of comments on Radio Shack and their attitude:

(A friend, Steve W8HN, owns a local Radio Shack store,
and another friend was a Tandy employee and manager for
several years...these comments are based on my frequent
converstaions with them over the years.)

FYI, there are two types of store: company and franchise.

Company owned stores are managed in the traditional chain store
manner of regional managers and low paid local personnel. Most
policy seems to come from Ft. Worth, but a sharp regional manager
can staff the stores with good people. More often, the results
are driven more by policy and profits. Kinda like Kmart on a small
scale...

Franchise stores put up with Ft. Worth policy, too, but in a far
different manner. Since the local ownership is often involved
in the day to day operations of the store, the feedback loop
is much shorter. A sharp franchise owner can easily staff the
store with decent personnel...and monitor the situation.

Both types of stores have to work with the national advertising
and merchandising policies from Ft. Worth. Since Tandy now sees
themselves as a consumer electronics retailer, their products
and advertising reflect that image. Tandy has tried to shed the
nerd store image over the past few years.

On component items: these are indeed a profitable item for
the stores; the margins are greater than most of the consumer
items, in part because they have little competition. This is
reflected in the commitment of a large portion of the floor
space and wall area in most stores. The types and quantities
of these items are determined by buyers in Ft. Worth and clearly
do not always reflect the experiences of managers, franchisee's
and consumers. None the less, Tandy seems to get it right
about 75% of the time.

Tandy also "force feeds" component items to the stores in
quantities that do not always fufill demands. This leads to
the mysterious overstocks and understocks you sometimes see.
Special ordering components (or even reordering items) can
be very difficult if not impossible at times. Tandy does appear
to be working on this, and seems to have made the process
a bit easier recently.

Individual stores also have to pay for their own warranty repairs. In other words, Tandy does not pay for warranty repairs, the store (or franchisee) does. This explains the concern you see about warranty repairs, especially if the item was not purchased at the store the item is being returned to.

Also, Tandy does seem to take customer communications to Ft. Worth seriously when the customer has a credible complaint. A well written letter with full details sent to corporate can have a postive effect and affect the situation.

Based on the comments made to me by those who have worked for or with Tandy, I'm inclined to be less than thrilled by many of Tandy's attitudes and policies. Nonetheless I find RS stores a handy place to purchase items from time to time. In my case, I make an effort to buy my RS stuff from franchise stores where possible. I believe in independant businesses and their closer relationships with their customers.

In article <1d.1834.3205.0NAC7F8D@synapse.org> david.mercer@synapse.org (David Mercer) writes:
>
>Can you provide an IP address (numerical) for above. My nameserver cant
>find it.
>

from the FAQ:

* Callsign servers and geographical name servers
If you are at an Internet site you can connect using telnet to one
of the two primary servers:

callsign.cs.buffalo.edu (currently 128.205.32.2)
ham.njit.edu (currently 128.235.1.10)

There is also a general geographical name server at:

martini.eecs.umich.edu (currently 141.212.100.9)

The callbook servers sit on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

hope this helps,

I guess we never should have begun to drive cars because they needed larger roads. I also guess we never should have begun air travel because we needed to hire air traffic controlers. Highschool should have been good enough, we shouldnt have invented college, because we have to pay more taxes.
GOOD GRIEF!

CW is a great mode, and it does has its advantages, but just because the ARRL is taking a stand for packet, dont have a hissy! These guys move lots of information around the world at 10 times the pace any cw operator could. Compare it to Ma Bell. There are no poor souls who sit at a switch board, manually stretching wires and plugging them into holes. Its automatic! Why should all of our data have to bottleneck at a traffic net where maybe only 8-10 people check in regularly using cw? Please!

Just because there is a process to allow semi-auto forwarding, there is NOT going to be an automatic influx of packet bbs's on HF. The same ones there are still going to be there, they will come and they will go, so let it be.

PS. I dont operate CW _and_ I dont miss an RTTY contest!

On a somewhat related note, I was told by a Radio Shack manager that they are instructed to refuse to sell you a scanner if you ask or say anything about monitoring cellular. Why are they so cautious about that and yet sell amateur, marine and itinerant/GMRS tranceivers without even mentioning licenses...

|> No, they'll sell it to you if you have the green. It's perfectly
|> legal for non-hams to own a transmitter, as long as they don't use it.

Up here, they will (at least they are suppose to) ask to see your licence. If you can't show them the licence they are not allowed to sell it to you. The Radio Act of Canada makes it illegal to install, operate, or possess a radio which is capable of transmission unless you have a licence or the radio is exempt (CB, cordless phones, etc).

I ran into problems before I got my licence. I was going to write the exam on the 2nd of July and the sale on the HTX-202 ended on the 30th of June. I attempted to put the radio on lay-a-way until I got the licence (3-7 days after writing the test) but the manager at the Radio Shack dealer said "Nope, by putting this on lay-a-way, we would be breaking Radio Shack policy and violating Federal Law". So I went down the street to another Radio Shack store and did it there. I guess since the manager was a ham this made the difference.

|> Spanish speaking stations. I wonder if these weren't stations working
|> above the US legal limit in Mexico (300 km away)...
|>

Probably not. I hear Spanish speaking stations from Mexico
and South America here in the Boston area, all the time.
Like 10 meters, 11 meters is a good world wide band when skip cycles
are high. Even though it's illegal, I have talked all over the word
from both my house and car.

When condidtions are right, I simply cannot hear any local station
more than a mile or 2 from me, but Austria may come in like next door.
I figure so long as I'm otherwise legal, i.e. power, frequency etc...,
there is little harm. I guess the other alternative, when I cannot
use the radio locally, is to turn it off all together. This seems like
such a waste though.

BTW most of the above is in reference to SSB operation. In my experience
when skip is running, on AM the noise level is so high that I do just
turn it off.

I spotted someone travelling down the highway this morning going
*** 56 MPH!!! *** endangering not only the driver's life, but everyone
in the whole country, with this terrible violation of the law!
Mere posession of a car capable of exceeding the speed limit is in
my opinion antisocial and should be banned.

Flame off.

1498. iambic paddles, how to use them?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-02 14:31:23 UTC
From: ksampath@magnus.acs.ohio-state.edu
Message-ID: <26503r$cgq@charm.magnus.acs.ohio-state.edu>

i am a straight key user, and upgrading to a kent iambic paddle.
since i have never used paddles seriously (atleast for cw ;-)),
i would like to get the net wisdom on proper usage, and learning
techniques for iambic keys.

any help appreciated.

Hmm, these both look like an RF pickup problem, it is possible that
the "ACC" port is acting as an inadequately filtered point of entry.
Even when you're running 'phone you could have RF entering the box and
getting just about everywhere from the cable you use for Amtor/packet.

It certainly seems a nuisance to have to keep groping around the
back whenever you change modes. The 765 is set up to do proper FSK, and
there is even a proper mode switch on the front for it, I too would
strongly advise using this rather than inserting FSK audio and using the
SSB mode. It is much cleaner, which could improve your error rate at the
far end (and those on adjacent frequencies should hear less splatter)

My brain must not be firing on all cylinders today, I wondered if the
original post mentioned Data modes and spent some time wondering why
anyone would use the compressor on AFSK, re-reading everything helped me
get myself sorted out.

I've found just about every lead can inject RF into the 765 if the
shack is "Hot" with Rf. This is similar to just about all the other
commercial rigs. Any luck with changing feeder routing?

Cheers
David

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1993 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2545; 615-688-7771.
The 1993 Test Fee is $5.60.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1993 Test Fee is $5.60.

Sorry, it is illegal to OWN or operate any linear for CB. He should send
the ad to the local FCC field office and let them take care of this bozo.
The FCC has a record of getting these illegal amps off the market. Just
cause you don't hear about it don't mean it aint happen'n..

In article <MAS.93Sep1151726@porgy.jpl.nasa.gov> mas@porgy.jpl.nasa.gov (Marc A. Sarrel) writes:
>I'm looking forward to upgrading from Tech Classic to General sometime
>soon, but I can't find my original FCC license to take with me to the
>exam. I have a photocopy that I carry with me, but not the original.
>What am I to do?
>Can I get the FCC to issue a replacement original, or will the
>examiners most likely accept a photocopy anyway?
>Marc

Marc,

Examiners are not supposed to accept copies of the license. The original is the only thing we are supposed to accept. However, if you personally know a few of the examiners they might let you slide on this, especially if they are the ones who gave you the original exam. They would have records of your first test. Asking an examiner to run with a photocopy of the original license is strictly speaking, illegal.

Now, you can get a form 610, fill it out, apply for a duplicate license, mail it to the FCC (the address is on the 610) and in about 4 weeks you'll receive your new license wich you can take to the test.

If you are a Tech+ and have credit for the 5 WPM, then you will definitly need your CSCE to prove 5WPM credit since your license will have a new date on it. If you can't find a CSCE, and you've been licensed a while, perhaps carrying in a callbook might help with your original license.

Or, since you'll be taking the 13 WPM before the 5 WPM, you really don't have to prove you passed the 5WPM.

Is that crystal clear? Probably not, but it's a good shot. Bottom line easiest way: Apply for a duplicate license ASAP.

Best 73,

Well I tried Gene's fix and it is an improvement, however not a complete cure. I put the rig into a dummy load (very good one) and there is still a trace of rfi audio noise comes out of the speaker on all bands. There seems to be a RF loop somewhere in the IC 765. I will explore more.... Anyone else out there can add anything?

1505. Re: Repeater Directories?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-02 15:40:40 UTC
From: tomb@lsid.hp.com
Message-ID: <CCqGvs.2Er@hpcvsnz.cv.hp.com>
Source record: 277112

Watkins, Robert Shawn (RW884@CONRAD.APPSTATE.EDU) wrote:
: Can someone please tell me how I can obtain a repeater directory? Is there
: one available electronically? If not, where can I purchase one?

Besides the ARRL one already mentioned, there's a company in Vancouver, WA., that publishes repeater maps. I've not actually seen one to be able to comment on its accuracy or usefulness, but I really like the map format for travel. The ARRL book lists repeater by location, but often the location is a mountain or hill that only the locals have heard of, or a tiny city that I'd have to search on the map for. Having the repeaters pinpointed on a map already is a great help.

The company that publishes them advertises in QST (and other ham rags, I believe). Besides individual state maps, they have an atlas of all of them.

: most items. I don't agree that we should boycott them - we just need to let
: them know that if we have questions we will ask - just leave us alone while we
: pick out the parts we need.
:
: Bryan Peterson, peterson@physc1.byu.edu
: Provo, UT

IF they had a good stock...IF they had accessable hours...IF they told you
yes we have xyz part (over the phone) and not make ya buy their catalog just
to find out if they still carry a 2N107 ...and is it really on the hook...
....
Then I would agree with you.

As to 'leave us alone' I used to train them good the FIRST time in:
'Can I help you?'
"Yes. I'm building an Interositor. I need all the parts for the control
panel."

(or somthing way out like that)

Its fairly easy to get the guy to 'leave you alone'...it's all the rest of
the stuff thats a problem.

>2 hours total.

>This any kind of record?

Yep, I'd say the VE's set a record by getting all the grading and paperwork
done in such a short length of time :->

When I upgraded to Technician, I started the exam at 8:30 and turned my papers
in about 20 minutes later. It was nearly 11:00 before I got my certificate.
Seems the papers are stacked as they are turned in. I got wise at the General
session and waited til last to turn it in. Took about 15 minutes that time.

Hey, but they are VOLUNTEERS, right?

bodoh@dgg.cr.usgs.gov (Tom Bodoh) writes:
>On a somewhat related note, I was told by a Radio Shack manager that they
>are instructed to refuse to sell you a scanner if you ask or say anything
>about monitoring cellular. Why are they so cautious about that and yet
>sell amateur, marine and itinerant/GMRS tranceivers without even
>mentioning licenses...

Probably because a law against selling any scanners whatsoever isn't
impossible to imagine (the FCC already HAS banned scanners capable of
receiving cellular or capable of being "easily modified" to do so,
effective sometime later this year, I think). R/S is probably worried
about hordes of "investigative reporters" descending on their stores,
making purchases "obviously" for the sole purpose of monitoring cellular
calls, and then doing tabloid-TVs expose's about buying "criminal tools"
at your friendly neighborhood Radio Shack. Now if only we could get the
tabloid TV yammerheads frothed up about people illegalling operating on
10 meters..... (nah, they'd probably just argue that anyone transmitting
on 10 meters should be shot immediately, just in CASE they were a pirate.)

1510. Compare IRCI & Kenwood Filters.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-02 16:05:10 UTC
From: mohan@tulip
Message-ID: <1993Sep2.110511.5781@uoft02.utoledo.edu>
Source record: 277118

Hello,
Today I received a catalog from IRCI, and found the following specs for the
CW filters they make for the TS-520S.

Can someone here who has tech specs for the Kenwood make CW Filter for TS-520S
comment on the quality of the IRCI compared to the Kenwood one.

IRCI 8 Pole Crystal Filter (Drop in exact replacement for Kenwood model)
Bandwidth @ 6dB - 250Hz or 400Hz or 500Hz
Center frequency - 3395 kHz
Shape Factor - 2.7

This filter costs about $75.00. Is it an ok price for a CW Filter? And what
decides the bandwidth choice ?

Thanks for your comments.

: exam. I have a photocopy that I carry with me, but not the original.
:
: What am I to do?
:
: Can I get the FCC to issue a replacement original, or will the
: examiners most likely accept a photocopy anyway? ------------Yes
:
: Marc
:
: N7OLI
:
Yes, as far as FCC issuing a replacement....just fill out form 610 and
check off []Replacement lic.

They will want an explanation why you don't have the original.

As to the Examiners, if they know you real well, they might say 'ok go on
thru...' but by rights , they need to see the original IF there is any
doubt it's 'for real' (your liecence).

Whgat I did was to 1st get the replacement, Then , upon getting it, I made
up the copies, and had no problem concerning examiners.

>Mere posession of a car capable of exceeding the speed limit is in
>my opinion antisocial and should be banned.

Yammerhead. 55MPH : 56MPH :: 5W : 1000W ?

It turns out that the FCC considers mere possession of a CB linear to be evidence of use, and they'll charge you just on that basis (if they have time, of course). Those FCC offices that have the spare time will, in fact, respond to ads like this and nail the seller (though the concentrate more on people manufacturing them for sale).

1000W CB linears not only spoil the enjoyment of the CB band for legal CB operators (much like someone driving a tank at 10,000MPH the wrong way down the highway would probably spoil your morning commute), but the resulting splatter from your typical illegal "linear" (hey, it's already illegal to use an amplifier, why the hell worry about spectral purity regulations?) ruins TV and radio reception for miles (which frequently get blamed on local hams [to return to the topic of THIS group] since (not being criminals) they are more visible).

Jim,

You might want to check out QST from a few months ago. They had an article about working the "easy sats", and it's really pretty easy. I work RS-10 using an all-mode VHF for the uplink, and a Radio Shack shortwave radio for the downlink. The uplink is only running 10 watts to a home made copper pipe Jpole, and with 50' of RG-8 between the two, not much of it even gets there. The downlink antenna is basically a long wire strung out the window. I don't get real great reports, and the other stations are hard to hear, but it does work. Once you have a working setup, you can experiment and upgrade in pieces.

Also, don't forget you'll need some sort of computer with a satellite tracking program.

Have fun, and good luck,

Greg KD6KGW

>I've heard stories of people who did it all in one sitting. The stories
>I've heard involved people who were already licensed in another country
>or who had been licensed previously in the U.S. and had let their ticket
>lapse.

I did it all in one sitting, and let me tell you I was one tired puppy
afterwards. I was at the Rochester hamfest, and I saw a notice that a VE
session would be held that day. So for $5.60, I thought "what the heck,
all the good bargains are gone anyways!" Everyone and his dog was there,
and the ventilation was turned off. It must have been over 100 degrees F in
there!

I don't know if Extra-in-one-sitting has ever been done by anyone
>who had never been licensed before. Probably.

I already held my Canadian licence. My hat's off to any newcomer who can
get to extra in one sitting.

When is the last time you listened on the CW subband during a band opening?
Sure, there are days when there's empty space, but on those days there's
empty space on the phone subbands also. When the band is cooking, I can't
find an open spot from 7.025 to 7.050 with more than 500 Hz available. And
by the way, I *do* have a filter, a 200 Hz. I hesitate to push this filter
to its limit (except during contests) because I know that many folks don't
have that luxury.

>
>I suspect that some may fear a repeat of the AM/SSB wars of the 50s

>

I'm glad you have this all figured out, Gary ;-) However you could not be
more wrong. I won't turn this thread into another dead horse kickathon by
arguing about Morse testing, but I will say that if the CW-only areas of
the bands are ever shared with the automated-digital folks, it will *not*
endanger the manual-digital species. It may, however, force us to spread
out into other areas of the band *where we are entitled to operate* rather
than remaining in our segregated bandspace. Now which would you rather have?

1523. Compare IRCI & Kenwood Filters.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-02 18:05:10 UTC
From: Mohan.Pakkurti@f121.n324.z1.fidonet.org
Message-ID: <747490498.AA02688@buscard.fidonet.org>
Source record: 276801

Reply-To: mohan@tulip.es.utoledo.edu

Hello,
Today I received a catalog from IRCI, and found the following specs for the
CW filters they make for the TS-520S.

Can someone here who has tech specs for the Kenwood make CW Filter for TS-520S
comment on the quality of the IRCI compared to the Kenwood one.

IRCI 8 Pole Crystal Filter (Drop in exact replacement for Kenwood model)
Bandwidth @ 6dB - 250Hz or 400Hz or 500Hz
Center frequency - 3395 kHz
Shape Factor - 2.7

This filter costs about $75.00. Is it an ok price for a CW Filter? And what
decides the bandwidth choice ?

Thanks for your comments.

>

I have seen a problems that sound similar to the original poster's. When I first had my PK232 and an IC-726 HF rig, I could not leave the PK232 cable plugged in and talk on SSB. I got complaints from everyone!

The solution for me was to scrape the paint off the bottom of the PK232 around one of the screw holes, and use a ring terminal with lockwasher teeth to connect a wire from the PK232 to the station ground. Once I did this ALL the problems went away.

I'll echo KD1GG's sentiments about using the FSK line rather than the AFSK for RTTY, Amtor and Pactor. You will produce a much cleaner signal, and be able to use your 500Hz filter.

>mentioning licenses...

Probably because a law against selling any scanners whatsoever isn't
impossible to imagine (the FCC already HAS banned scanners capable of
receiving cellular or capable of being "easily modified" to do so,
effective sometime later this year, I think). R/S is probably worried
about hordes of "investigative reporters" descending on their stores,
making purchases "obviously" for the sole purpose of monitoring cellular
calls, and then doing tabloid-TVs expose's about buying "criminal tools"
at your friendly neighborhood Radio Shack. Now if only we could get the
tabloid TV yammerheads frothed up about people illegalling operating on
10 meters..... (nah, they'd probably just argue that anyone transmitting
on 10 meters should be shot immediately, just in CASE they were a pirate.)

1526. Re: I can't find my original license

Marc Grant (marcbg@feenix.metronet.com) wrote:

: Examiners are not supposed to accept copies of the license. The original
: is the only thing we are supposed to accept.

I'm looking in the ARRL VE Manual (fifth edition: newer one is at home, sorry), and getting a bit confused about this. From Page 23, second column (Ch. 4: Keepping Track of It All!):

"An examinee is required to present both a photocopy and his or her original FCC-issued license. [Just like Marc G. says above.] In cases where an applicant presents only a CSCE and cannot produce his or her current amateur license, the applicant may take the requested exams. However, upon passing, the applicant should be given a CSCE that is marked only for credit for the element(s) passed at the session, not for upgrade credit. The upgrade paperwork will have to be worked out betweent he candidate and the VEC (with the candidate supplying proof of possessing a FCC-issued license) after the exam."

But in Chapter 6: Test Day: Conducting the Test Session, page 34, we see:

"Original license. The FCC also instructs the candidate to present the team with his or her current ACTUAL, ORIGINAL, SIGNED amateur licnese, if the candidate holds one."

(several paragraphs about the importance of this deleted...)

"While the candidate who has proven his or her identity without showing an original license can take the upgrade exam(s) at the session, the candidate may only be issued a Certificate of Successful Completion of Examination (CSCE) that indicates element credit, not upgrade credit. The candidate is responsible for sending a photocopy of the missing license to the ARRL/VEC office; when we receive it, we will compare the data on the license with that on the candidate's Form 610 and, if necessary, contact the FCC for confirmation of the information. (See "Issuing CSCEs" later in this chapter.)"

So if I read this right, you can take the test, (pass), get a CSCE, send it in to the VEC with a _photocopy_ of your license and a 610, and get your upgrade... But you do NOT have legitimate immediate higher-class operating authorization.

(Why does it look like there were some bureaucrats involved setting all this up?? ;-)

Yammerhead. 55MPH : 56MPH :: 5W : 1000W ?

It turns out that the FCC considers mere possession of a CB linear to be evidence of use, and they'll charge you just on that basis (if they have time, of course). Those FCC offices that have the spare time will, in fact, respond to ads like this and nail the seller (though the concentrate more on people manufacturing them for sale).

1000W CB linears not only spoil the enjoyment of the CB band for legal CB operators (much like someone driving a tank at 10,000MPH the wrong way down the highway would probably spoil your morning commute), but the resulting splatter from your typical illegal "linear" (hey, it's already illegal to use an amplifier, why the hell worry about spectral purity regulations?) ruins TV and radio reception for miles (which frequently get blamed on local hams [to return to the topic of THIS group] since (not being criminals) they are more visible).

1528. Re: Opinions on Alinco DR-600T (and fitting it in Toyota/Lexus dash)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-02 19:56:31 UTC
From: bruce@mongo.Com
Message-ID: <1993Sep2.195631.23386@pixar.com>
Source record: 277035
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have a DR-600t, and am really happy with it.

The only two mis-features I can find are that the front panel isn't made to pop out and go in your pocket when you leave the car, the way my car stereo front panel does, and that the remote command that switches the transmitter power cycles between three power settings without telling you which power setting it is on unless you can see the front panel.

I use this rig as an "extender" for my HT. It works very well in that application. You can enable and disable cross-band-repeat remotely, change frequencies, program memories, etc. It's nice to be able to keep my DJ-580t at low power and have the rig in the car repeat it at high power.

I am using the remote-mount for the front panel, with the rest of the rig in the trunk. I have a Toyota Camry. My Camry had a black plastic panel about the size of the DR600 front panel to the left of the steering wheel. That panel contained the dashboard light dimmer, a coin holder, and two covers over blank switch holes. I relocated the dashboard light dimmer to another blank panel in the dashboard nearby, which did not take any rewiring, only some plastic work with my dremel grinding bits. I then popped out the black panel and squeezed the DR600 front panel in there. It's so tight that it stays there securely without fasteners, and it looks as if it is built into the dashboard. It's also difficult to see from outside the car, but very convenient for the driver to operate.

I just inherited a Motorola Pulsar radio, and have little idea what it is. It's a trunk mount HEAVY box, with a cable but no control head. The guy I got it from said he thought it was UHF. Model is T1776A. Can anyone provide me with any info on this unit? Is it worth keeping? Easy to retune for ham bands, is it multi-channel, any good parts (if nothing else I might be able to drive the power amp directly with my 440HT on low power and get 40 or so watts out...a cheap mobile amp?).

Any and all info would be most appreciated.

|> No, they'll sell it to you if you have the green. It's perfectly
|> legal for non-hams to own a transmitter, as long as they don't use it.

Up here, they will (at least they are suppose to) ask to see your licence. If you can't show them the licence they are not allowed to sell it to you. The Radio Act of Canada makes it illegal to install, operate, or possess a radio which is capable of transmission unless you have a licence or the radio is exempt (CB, cordless phones, etc).

I ran into problems before I got my licence. I was going to write the exam on the 2nd of July and the sale on the HTX-202 ended on the 30th of June. I attempted to put the radio on lay-a-way until I got the licence (3-7 days after writing the test) but the manager at the Radio Shack dealer said "Nope, by putting this on lay-a-way, we would be breaking Radio Shack policy and violating Federal Law". So I went down the street to another Radio Shack store and did it there. I guess since the manager was a ham this made the difference.

|> above the US legal limit in Mexico (300 km away)...
|>

Probably not. I hear Spanish speaking stations from Mexico
and South America here in the Boston area, all the time.
Like 10 meters, 11 meters is a good world wide band when skip cycles
are high. Even though it's illegal, I have talked all over the word
from both my house and car.

When condidtions are right, I simply cannot hear any local station
more than a mile or 2 from me, but Austria may come in like next door.
I figure so long as I'm otherwise legal, i.e. power, frequency etc...,
there is little harm. I guess the other alternative, when I cannot
use the radio locally, is to turn it off all together. This seems like
such a waste though.

BTW most of the above is in reference to SSB operation. In my experience
when skip is running, on AM the noise level is so high that I do just
turn it off.

Wait a while and it will appear again. It is a regular feature. I did save
it but edited out all but the G callsigns.

: --

Hmm, these both look like an RF pickup problem, it is possible that
the "ACC" port is acting as an inadequately filtered point of entry.
Even when you're running 'phone you could have RF entering the box and
getting just about everywhere from the cable you use for Amtor/packet.

It certainly seems a nuisance to have to keep groping around the
back whenever you change modes. The 765 is set up to do proper FSK, and
there is even a proper mode switch on the front for it, I too would
strongly advise using this rather than inserting FSK audio and using the
SSB mode. It is much cleaner, which could improve your error rate at the
far end (and those on adjacent frequencies should hear less splatter)

My brain must not be firing on all cylinders today, I wondered if the
original post mentioned Data modes and spent some time wondering why
anyone would use the compressor on AFSK, re-reading everything helped me
get myself sorted out.

I've found just about every lead can inject RF into the 765 if the
shack is "Hot" with Rf. This is similar to just about all the other
commercial rigs. Any luck with changing feeder routing?

Cheers
David

Sorry, it is illegal to OWN or operate any linear for CB. He should send
the ad to the local FCC field office and let them take care of this bozo.
The FCC has a record of getting these illegal amps off the market. Just
cause you don't hear about it don't mean it aint happen'n..

>I'm looking forward to upgrading from Tech Classic to General sometime
>soon, but I can't find my original FCC license to take with me to the
>exam. I have a photocopy that I carry with me, but not the original.
>What am I to do?
>Can I get the FCC to issue a replacement original, or will the
>examiners most likely accept a photocopy anyway?
>Marc

Marc,

Examiners are not supposed to accept copies of the license. The original is the only thing we are supposed to accept. However, if you personally know a few of the examiners they might let you slide on this, especially if they are the ones who gave you the original exam. They would have records of your first test. Asking an examiner to run with a photocopy of the original license is strictly speaking, illegal.

Now, you can get a form 610, fill it out, apply for a duplicate license, mail it to the FCC (the address is on the 610) and in about 4 weeks you'll receive your new license wich you can take to the test.

If you are a Tech+ and have credit for the 5 WPM, then you will definitly need your CSCE to prove 5WPM credit since your license will have a new date on it. If you can't find a CSCE, and you've been licensed a while, perhaps carrying in a callbook might help with your original license.

Or, since you'll be taking the 13 WPM before the 5 WPM, you really don't have to prove you passed the 5WPM.

Is that crystal clear? Probably not, but it's a good shot. Bottom line easiest way: Apply for a duplicate license ASAP.

Well I tried Gene's fix and it is an improvement, however not a complete cure. I put the rig into a dummy load (very good one) and there is still a trace of rfi audio noise comes out of the speaker on all bands. There seems to be a RF loop somewhere in the IC 765. I will explore more.... Anyone else out there can add anything?

Don't understand what you're describing here. What CW mode uses up
50khz ? CW doesn't use any 'encoding' schemes. You turn the transmitter
on, you turn the transmitter off. It emits a single wave on a single
frequency. Very little bandwidth - certainly not 'anywhere' near 50khz.
Geezzz SSB's only 2.5khz of bandwidth, or so.

When I ran 'generic' RTTY, I don't think my bandwidth was over a few
hundred hz. What are you running ?

Hello there.

Do any of you have any antenna or RX schemes to reduce the awful noise
on 40 M. Yes, in the winter it's quieter, but still the noise is there.
Is there a Polomar loop, or something you can buy to quiet it down?
I hear ZL's early in the night over here and would like to hear them better,
along with my East Coast friend.

I use a vertical, but my 560 foot loop also is having noise problems.

At present, I turn the RF gain down and click on my DSP kit, but still...

Thanks in advance,

I saw the article on how to build a charger/regulator/lead acid
battery combination in the September QST.

Is there a similar sort of beast sold commercially? I'd be interested
for in using it for public events/emergency communications. I think I
remember hearing about such a thing a while ago, but a scan of the ads
in QST and the AES catalog revealed nothing. The one I remeber was
based on NiCd's and had a trickle charger...

Watkins, Robert Shawn (RW884@CONRAD.APPSTATE.EDU) wrote:
: Can someone please tell me how I can obtain a repeater directory? Is there
: one available electronically? If not, where can I purchase one?

Besides the ARRL one already mentioned, there's a company in Vancouver, WA., that publishes repeater maps. I've not actually seen one to be able to comment on its accuracy or usefulness, but I really like the map format for travel. The ARRL book lists repeater by location, but often the location is a mountain or hill that only the locals have heard of, or a tiny city that I'd have to search on the map for. Having the repeaters pinpointed on a map already is a great help.

The company that publishes them advertises in QST (and other ham rags, I believe). Besides individual state maps, they have an atlas of all of them.

:
: I just got my ham ticket a couple of years ago, and I find your post
: quite enlightening, Chuck. I certainly had noticed a major discrepancy
: between the "gentlemens' agreement" discussed in the introductory ARRL
: book and what I was hearing at the lower end of 40 meters. Maybe I just
: wasn't listening before, but it seems to me that even two years ago I
: never heard SSB signals from 7.025 - 7.040. More recently I do hear them,
: and they always seem to be from South America I think (spanish).
:
: increased difficulty in establishing and keeping scheduled QSOs, and
: more intolerance for those who don't use the "correct" mode. Actually the
: intolerance is probably there already, but with the modes segregated into
: distinct subbands we don't have to listen to the modes we don't like ;-)
:
: >....
:
: >our favorite modes. remember, the bicycle is still around. it hasn't
: >been outlawed, yet i see a lot of people with the attitude that A1 should
: >be outlawed and/or taken off the bands. you'll take my cold dead hands
: >from my keyboard and/or kent or bencher.
:
: I can't agree with this...I have never heard anyone with the attitude that
: A1 should be banned from the air. I think you just wanted an excuse to
: use the trite "cold dead hands" phrase ;-) I do agree with you on the last,
: though...and at 33 yrs old I'll be around a while to make sure A1 survives
: on the bands for a few more decades.
:
: we need to keep some semblance of order on the HF bands, or they are going
: to become unusable for everyone. Semi-automatic operation is clearly a
: step in the wrong direction, as it allows interference to occur. Even though
: such interference is not *intentional* interference, that doesn't make it OK.

:
: There may be some interesting irony in the works here for the digital folks:
: If the band gets so trashed that interference becomes the rule rather than
: the exception, and since Spread Spectrum is not allowed on the HF bands,
: then the A1 mode will probably become the most reliable way to communicate
: over HF!

Well, then theres 3 of us who feel essentially the same way.

Sence it takes (me) too long to twiddle the knobs to notch out QRM from
another CW sig 'a couple hundred cps away' , I've (somehow) learned to do
the filtering in my head.
Be dog-goned, it works!
But get some TTY (of which I am not so sure is even Ham...it runs on & on
& on) that has either the mark or space freq dead smack on same freq as
the guy you are trying to hear.... ehhhh.

So it just may well be, everone will revert back to CW when no other way
works.

I'll try the PK-232 direct-ground wire. The really interesting thing is
that I *do* use FSK (not AFSK) from the PK-232 to the 765, and the audio input
pin of the ACC connector is connected to nothing! It's certainly RF pickup
but it seems to be getting into the 765's audio from somewhere other than
the audio input lead. Thanks for the hint.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
September 3 to September 12, 1993

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

---------

*!*!*!*!*!*!* NOTE *!*!*!*!*!*!*

Version 2.00a of our Professional Dynamic Auroral Oval Simulator is now
available. Completely rewritten, this software now produces numerous
types of map projections centered on any geographical location, including
OBLIQUE AZIMUTHAL EQUIDISTANT maps where radio signal paths are projected
as straight lines. Precise DMSP Satellite Observations of Auroral
Activity characteristics are also plottable for any hour of any day from
December 1983 to 1992, making this the most extensive and contiguous
database of auroral activity observations presently available. Valuable
for radio communicators, aurora photographers, and astronomers. The
software is now Windows 3.x compatible and will operate under either Mouse
or Keyboard control. Many additional features are also included. Contact
Oler@Rho.Uleth.CA, or COler@Solar.Stanford.Edu for more information or
call our computer BBS at (403) 756-3008. A recorded message containing
additional information is also available at: (403) 756-2386.

DEFINITIONS:

Date (day only)
10.7 cm SOLaR radio FLuX forecast
HF Propagation Conditions for LOw, MIddle, HIgh, and POlar areas (see below)
HF Short Wave Fade Probability (in %)
HF Maximum Usable Frequency in +/- percent above seasonal normals.
HF Prediction CONfidence Level (in %)
VHF Sudden Ionospheric ENHancement Probs (in %), weighted for low-mid lats
PROBability of "s"poradic E (Es) during the UT day for low, mid and high lats
VHF AUroral BacKScatteR Probs (in %) for LOw, MIddle and HIgh Latitudes
VHF Overall Global DX Potential (in %) - weighted for Low and Middle latitudes
Geomagnetic Activity Kp Index (peak value - see below)
GeoMAGnetic Activity Ap Index (peak value - see below)
AURORAl Activity for LOw, MIddle and HIgh Latitudes (see below)

HF Prop. Quality rated as: EG=Extremely Good, VG=Very Good, G=Good, F=Fair,
P=Poor, VP=Very Poor, EP=Extremely Poor.
Probability of Sporadic E (Es) for the various latitudes is given in percent.
Kp Planetary Index rated: 0=V.Quiet, 1=Quiet, 2=Unstld, 3=Active, 4=V.Active,
5=Minor Storm, 6=Major Storm, 7=Maj-Sev Storm, 8=Severe Storm, 9=V.Severe.
Ap Planetary Index rated: 0-7=Quiet, 8-16=Unstld, 17-29=Active,
30-49=Minor Storm, 50-99=Major Storm, Severe Storm >=100.
Auroral Activity rated: NV=Not Visible, LO=Low, MO=Moderate, HI=High,
VH=Very High.

PEAK PLANETARY 10-DAY GEOMAGNETIC ACTIVITY OUTLOOK (03 SEP - 12 SEP)

Geomagnetic Field	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Anomaly
Conditions	Given in 8-hour UT intervals										Intensity

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

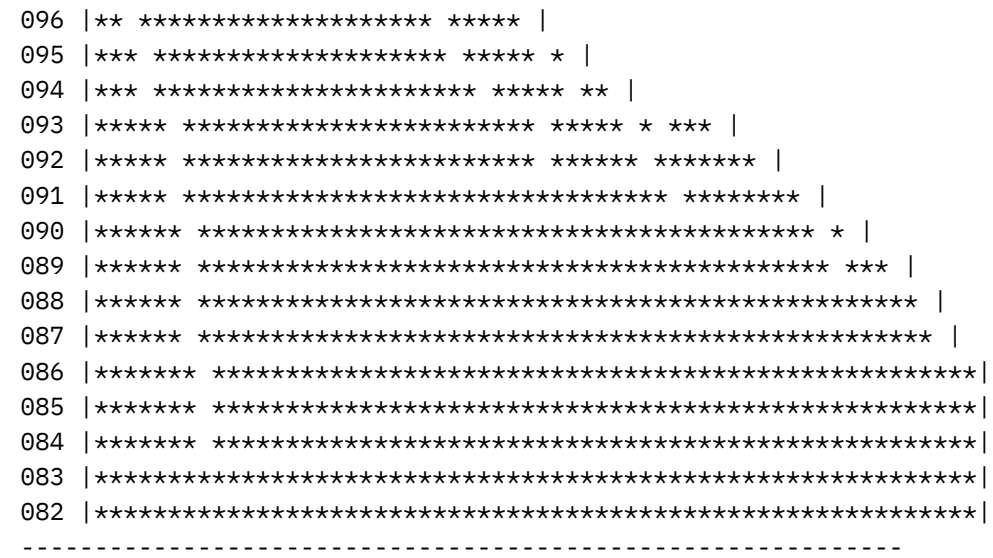

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

:
: I'm looking forward to upgrading from Tech Classic to General sometime
: soon, but I can't find my original FCC license to take with me to the
: exam. I have a photocopy that I carry with me, but not the original.
:
: What am I to do?
:
: Can I get the FCC to issue a replacement original, or will the
: examiners most likely accept a photocopy anyway? ------------Yes
:
: Marc
:
: N7OLI
:
Yes, as far as FCC issuing a replacement....just fill out form 610 and
check off []Replacement lic.

They will want an explanation why you don't have the original.

As to the Examiners, if they know you real well, they might say 'ok go on
thru...' but by rights , they need to see the original IF there is any
doubt it's 'for real' (your liecence).

Whgat I did was to 1st get the replacement, Then , upon getting it, I made
up the copies, and had no problem concerning examiners.

No, NOBODY can ask to see a license before selling a radio to you,
because no law requires that.

Jim,

You might want to check out QST from a few months ago. They had an article about working the "easy sats", and it's really pretty easy. I work RS-10 using an all-mode VHF for the uplink, and a Radio Shack shortwave radio for the downlink. The uplink is only running 10 watts to a home made copper pipe Jpole, and with 50' of RG-8 between the two, not much of it even gets there. The downlink antenna is basically a long wire strung out the window. I don't get real great reports, and the other stations are hard to hear, but it does work. Once you have a working setup, you can experiment and upgrade in pieces.

Also, don't forget you'll need some sort of computer with a satellite tracking program.

Have fun, and good luck,

Greg KD6KGW

1563. Passed 20 W.P.M. test

In a previous article, rab@hal.cwru.edu (Roger Bielefeld) says:

>>A fellow ham and I gave a co-worker the Novice exam in early May. When his call
>>arrived he was already a General. Two weeks ago he made Extra Class.
>>
>>15 weeks total.
>>
>>This any kind of record?
>>
>
>I've heard stories of people who did it all in one sitting. The stories
>I've heard involved people who were already licensed in another country
>or who had been licensed previously in the U.S. and had let their ticket
>lapse.

I did it all in one sitting, and let me tell you I was one tired puppy
afterwards. I was at the Rochester hamfest, and I saw a notice that a VE
session would be held that day. So for $5.60, I thought "what the heck,
all the good bargains are gone anyways!" Everyone and his dog was there,
and the ventilation was turned off. It must have been over 100 degrees F in
there!

I don't know if Extra-in-one-sitting has ever been done by anyone
>who had never been licensed before. Probably.

I already held my Canadian licence. My hat's off to any newcomer who can
get to extra in one sitting.

In article <1993Sep2.134100.26098@rsg1.er.usgs.gov> bodoh@dgg.cr.usgs.gov (Tom Bodoh) writes:
>
>On a somewhat related note, I was told by a Radio Shack manager that they
>are instructed to refuse to sell you a scanner if you ask or say anything
>about monitoring cellular. Why are they so cautious about that and yet
>sell amateur, marine and itinerant/GMRS tranceivers without even
>mentioning licenses...

Well, that's different. If the customer makes his *intent* to commit a criminal act clear, and you still persist in aiding hin in committing that act, then you become an accessory before the fact. For example, a hardware store clerk can sell a person a crowbar, but if the customer says that he wants the crowbar to break into someone's home, selling the crowbar to them then opens the clerk and store to legal liability.

If the customer came in wanting to buy an amateur, marine, or GMRS transceiver, *and stated he intended to use it illegally*, then the same liability could exist. As long as the customer *doesn't* indicate he intends to break the law, mere possession of such equipment isn't a crime. (With certain limited exceptions.)

This is an area where the law becomes slippery. Conspiracy, accessory before the fact, and other such crimes depend on the *intent* of the parties involved, often a difficult thing to prove or defend against. The corporate lawyers are just trying to protect their asses against possible legal action in the cellular phone arena because that's a hot topic in legal circles now.

1565. Hams on Usenet

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-03 00:22:32 UTC
From: hlb@f121.n324.z1.fidonet.org
Message-ID: <747490498.AA02704@buscard.fidonet.org>
Source record: 276806

Did anybody save the list of hams on Usenet that appeared some time ago?

Or know where to get it?

Thanks.

That's not a problem. In fact CW transmissions in the 75 meter phone segment are becoming common for some reason in the 3850 area. Notch filters do a great job of dealing with them. The narrow notch doesn't hurt SSB intelligibility at all, but sure gets rid of the beeping. Some of the newer DSP filters can even deal with multiple carriers. There are technical solutions to multimodal operation, regulation is not needed.

>users have had to do.

When is the last time you listened on the CW subband during a band opening?
Sure, there are days when there's empty space, but on those days there's
empty space on the phone subbands also. When the band is cooking, I can't
find an open spot from 7.025 to 7.050 with more than 500 Hz available. And
by the way, I *do* have a filter, a 200 Hz. I hesitate to push this filter
to its limit (except during contests) because I know that many folks don't
have that luxury.

>
>I suspect that some may fear a repeat of the AM/SSB wars of the 50s

>they feel the need to demand government protection as an endangered species.
>That certainly goes along with the continued defense of the special status
>of Morse testing in the exam system, but I digress. :-)
>

I'm glad you have this all figured out, Gary ;-) However you could not be
more wrong. I won't turn this thread into another dead horse kickathon by
arguing about Morse testing, but I will say that if the CW-only areas of
the bands are ever shared with the automated-digital folks, it will *not*
endanger the manual-digital species. It may, however, force us to spread
out into other areas of the band *where we are entitled to operate* rather
than remaining in our segregated bandspace. Now which would you rather have?

>

I have seen a problems that sound similar to the original poster's. When I first had my PK232 and an IC-726 HF rig, I could not leave the PK232 cable plugged in and talk on SSB. I got complaints from everyone!

The solution for me was to scrape the paint off the bottom of the PK232 around one of the screw holes, and use a ring terminal with lockwasher teeth to connect a wire from the PK232 to the station ground. Once I did this ALL the problems went away.

I'll echo KD1GG's sentiments about using the FSK line rather than the AFSK for RTTY, Amtor and Pactor. You will produce a much cleaner signal, and be able to use your 500Hz filter.

tomb@lsid.hp.com (Tom Bruhns) writes:
: ..... The ARRL book lists repeater by location, but often the
: location is a mountain or hill that only the locals have heard of, or
: a tiny city that I'd have to search on the map for. Having the repeaters
: pinpointed on a map already is a great help.
:
: The company that publishes them advertises in QST (and other ham rags, I
: believe). Besides individual state maps, they have an atlas of all of
: them.
:

I wonder how they put the 1500+ repeaters in California on one page?
San Jose in the heart of the silicon valley must have at least 250
repeaters. Some are High level some are garage boxes...the coverage up and
down the highways is different for each.

The real question one should allways ask is: What area does the repeater
reliably cover, not where it is located.

1570. I can't find my original license

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-03 02:10:44 UTC
From: Tom.Bruhns@f121.n324.z1.fidonet.org
Message-ID: <747490498.AA02759@buscard.fidonet.org>
Source record: 276824

Marc Grant (marcbg@feenix.metronet.com) wrote:

: Examiners are not supposed to accept copies of the license. The original
: is the only thing we are supposed to accept.

I'm looking in the ARRL VE Manual (fifth edition: newer one is at home, sorry), and getting a bit confused about this. From Page 23, second column (Ch. 4: Keepping Track of It All!):

"An examinee is required to present both a photocopy and his or her original FCC-issued license. [Just like Marc G. says above.] In cases where an applicant presents only a CSCE and cannot produce his or her current amateur license, the applicant may take the requested exams. However, upon passing, the applicant should be given a CSCE that is marked only for credit for the element(s) passed at the session, not for upgrade credit. The upgrade paperwork will have to be worked out betweent he candidate and the VEC (with the candidate supplying proof of possessing a FCC-issued license) after the exam."

But in Chapter 6: Test Day: Conducting the Test Session, page 34, we see:

"Original license. The FCC also instructs the candidate to present the team with his or her current ACTUAL, ORIGINAL, SIGNED amateur licnese, if the candidate holds one."

(several paragraphs about the importance of this deleted...)

"While the candidate who has proven his or her identity without showing an original license can take the upgrade exam(s) at the session, the candidate may only be issued a Certificate of Successful Completion of Examination (CSCE) that indicates element credit, not upgrade credit. The candidate is responsible for sending a photocopy of the missing license to the ARRL/VEC office; when we receive it, we will compare the data on the license with that on the candidate's Form 610 and, if necessary, contact the FCC for confirmation of the information. (See "Issuing CSCEs" later in this chapter.)"

So if I read this right, you can take the test, (pass), get a CSCE, send it in to the VEC with a _photocopy_ of your license and a 610, and get your upgrade... But you do NOT have legitimate immediate higher-class operating authorization.

(Why does it look like there were some bureaucrats involved setting all this up?? ;-)

I took the exam on July 10, and since then I have purchased my first set of radios, built an antenna, and even sold some of the older stuff to buy new stuff. But I still can't talk or tune.

The Questions are:

1. Should I just wait another few weeks?
2. Write them.
3. Call them.

Tim,
Call all the media folks you can think of. Describe to them how the club
will help the community and what interest or projects local HAMs have
already undertaken to help the community. Might include providing 2-meter
communications at local events, first aid, etc.
Show them the exciting aspects of the hobby and how it can help us
develop future scientists and engineers upon which this economy and country
rely so much.

Send a good, short news item to the community calendar section of all the
newspapers and electronic media that carry such public interest sections
with details of when a get acquainted meeting will be held.

If you have a local shopping mall or other visible area, set up a display
of HAM radion equipment in a way that will attract public interest and
seem exciting.Show how closely connected HAM radio and computers are.

I hope these suggestions will help you get the ball rolling.

Good Luck!

Monte Olsen
former info rep at a large hospital in Portland,OR.

Date: 1993-09-03 06:02:04 UTC
From: Michael.Mraz@f121.n324.z1.fidonet.org
Message-ID: <747490498.AA02722@buscard.fidonet.org>
Source record: 276681

I'll try the PK-232 direct-ground wire. The really interesting thing is
that I *do* use FSK (not AFSK) from the PK-232 to the 765, and the audio input
pin of the ACC connector is connected to nothing! It's certainly RF pickup
but it seems to be getting into the 765's audio from somewhere other than
the audio input lead. Thanks for the hint.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
September 3 to September 12, 1993

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

!!*!*!*!*!* NOTE *!*!*!*!*!*!*

Version 2.00a of our Professional Dynamic Auroral Oval Simulator is now available. Completely rewritten, this software now produces numerous types of map projections centered on any geographical location, including OBLIQUE AZIMUTHAL EQUIDISTANT maps where radio signal paths are projected as straight lines. Precise DMSP Satellite Observations of Auroral Activity characteristics are also plottable for any hour of any day from December 1983 to 1992, making this the most extensive and contiguous database of auroral activity observations presently available. Valuable for radio communicators, aurora photographers, and astronomers. The software is now Windows 3.x compatible and will operate under either Mouse or Keyboard control. Many additional features are also included. Contact Oler@Rho.Uleth.CA, or COler@Solar.Stanford.Edu for more information or call our computer BBS at (403) 756-3008. A recorded message containing additional information is also available at: (403) 756-2386.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

1576. rsgb gb2rs news for the 5th september

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-03 06:56:30 UTC
From: ted@tedb.demon.co.uk
Message-ID: <747039390snz@tedb.demon.co.uk>
Source record: 276769

Good morning. It's Sunday the 5th of September and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- The RSGB is demonstrating amateur radio at Olympia this month; and we have news of the elections for RLOs and RSGB Council.

The RSGB will be at Olympia from Thursday the 16th to Monday the 20th of September. The occasion is LIVE 93, a consumer electronics exhibition described by the organisers as "the largest public show to be launched in the UK in the past ten years". The RSGB stand, one of several featuring radio in its various forms, aims to introduce the hobby to as many people as possible. A special event station, GB0CES, will be operational. Full details can be found in the September edition of Radio Communication.

RSGB members intending to nominate a candidate for this year's RSGB Council election should note that nomination forms must be returned to RSGB Headquarters by noon on the 1st of October. Nomination forms can be obtained from Justine Hodges at RSGB HQ.

Nominations have closed in the election for RSGB Liaison Officers. There are no counties in which more than one valid nomination has been received, so no voting is necessary. The result of the election will be published in the October edition of Radio Communication which will be posted to all RSGB members during the week commencing the 20th of September.

A reminder, now that the RSGB wants feedback from listeners to GB2RS: RSGB President Peter Chadwick, G3RZP, following recent discussions at Council, has decided that a listeners view be sought of the content of the GB2RS broadcast before any decisions are taken as to its future role within the Society. Should you wish to make any comments about the GB2RS news broadcast, either in its favour or stating how you would like to see it changed, then please write to the Chairman of the Membership Liaison Committee, Clive Trotman, GW4YKL, QTHR, or care of RSGB Headquarters, Lambda House, Potters Bar, Herts EN6 3JE. It is the comments of you, the listeners, which will shape the future of GB2RS.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO. From French Guiana, DJ0PJ will sign FY/DJ0PJ from now for three weeks using QRP only, check 21.060MHz around 1900 and 2100GMT and 14.060MHz after 2100GMT. From Hawaii, DJ0FX will sign KH6/OE6BVG from today, Sunday until Friday the 10th from the QTH of KH6OR. Operation will be on SSB and CW, mainly on 15 and 20 metres, with the possibly of 17 metres also. From Cayman Islands, K6URI will sign ZF2VA from today Sunday the 5th until Friday the 17th of September, mainly CW on 15 metres. From Brunei, G3TXF hopes to be on the air from Saturday the 4th until Saturday the 11th of September. Activity will be CW only, check these frequencies:

14.023, 18.073, 21.023, 24.893 and 28023MHz. And from St Paul Island, the call sign CY9R will be used by a Canadian DX-pedition team from the 1st of September for one week.

Rally news now and we have been notified of four rallies for today, Sunday the 5th of September:

The Bristol Radio Rally, incorporating the Bristol Computer and Electronics Fair is being held at the Brunel Centre, Temple Meads Station, Bristol. Doors open at 10.30 am, but disabled visitors can gain access 15 minutes earlier. The event boasts more than forty trade stands and two bring-and-buy stalls - one for equipment under 25. Refreshments and ample under-cover parking are available. Talk-in is on channel S22, 145.550MHz.

The Milton Keynes and District Amateur Radio Society, seventh Annual Radio Boot Sale is being held at Cranfield Airfield (South side) in Bedfordshire. The airfield can be reached via Junctions 13 or 14 of the M1. Hot and cold snacks available. Talk-in will be on channel S22.

The Telford Amateur Radio Rally is being held at the Telford Exhibition Centre. Located just off the M54. Doors open at 10.30 am. There will be trade stands and a flea market and a "bring and sell" sale. Talk-in will be on channel S22 and via the UHF repeater GB3TF on channel RB8, 433.200MHz. Disabled visitors are asked to contact the organisers if they require parking permits.

The Vange Amateur Radio Society Rally is being held at the Laindon Community Centre, a short walk from Laindon railway station. Doors open at 10.30am and the rally includes traders, a bring and buy stall, refreshments and a free raffle. Talk in will be on channel S22.

We have news of four events taking place next weekend, two on Saturday the 11th and two on Sunday the 12th of September:

On the 11th, the Ballymena Amateur Radio Rally will be held at the Ballee High Community School. Doors open at 12.00 noon. The event features the usual trade stands, an RSGB bookstall and QSL Bureau, also a large bring & buy stall. Refreshments will be available. Further details can be obtained from GI4HCN who is QTHR.

Also on the 11th the Scottish Amateur Radio Convention (SARC93) will be held at the Gardonal College, 690 Mosspark Drive, Glasgow. Doors open at 11.00am, 10.30am for disabled visitors. The event has many tables for traders and special interest groups, an RSGB Bookstall and a large bring and buy stall. RSGB officials will also be in attendance. The RSGB Open Forum will be hosted by President-Elect Ian Suart, GM4AUP and General Manager Peter Kirby, G0TWW. Other open forums scheduled are for Digital Communications and Repeaters. Morse Tests will be available on demand - just arrive with two passport photographs and the fee. Talk-in will be on channel S22. For further details contact Tom, GM3EDZ on 041 882 5753.

And on Sunday the 12th:

The British Amateur Radio Teledata Group (BARTG) Rally will be held at the Sandown Exhibition Centre, Esher, Surrey. Sandown is located about 10 minutes from the M25 motorway, off junction 10 and not far from the M3, M4 and M40 motorways. Doors open at 10.30am. There will be many exhibitors and special interest groups featuring the latest in radios, computers, computer peripherals, software, books, kits and test equipment. There is also a bring and buy stall. Full catering facilities will be available. Further details can be obtained from Peter Nicol on 021 453 2676.

Finally the Lincoln Short Wave Club Hamfest will take place at the Lincolnshire Showground and Exhibition Centre which is located four miles north of Lincoln on the A15, Lincoln to Scunthorpe road. Doors open at 10.30am. The event will feature all the usual trade stands, plus a large bring and buy stall. Refreshments will be available as will attractions for the rest of the family. Caravans are welcome by arrangement. Talk-in will be on channel S22. Details from Denis, G1XZG on 0522 684214.

HF contest news now:

The first RSGB Slow Morse Cumulative Contest is tomorrow, Monday the 6th. This is the first of five sessions to be held between September the 6th and October the 8th, 1900 to 2030 GMT on 3.540 - 3.580MHz. July RadCom has details of power output and exchanges.

Next some VHF contest news:

The RSGB's 144MHz Trophy and SWL Contest takes place this weekend. There is still time to take part before this 24-hour contest finishes at 1400GMT today. See February RadCom page 67 for details. The next 144MHz CW Cumulative Contest is on Wednesday the 15th of September from 2030 to 2300 local time. This is the second of five sessions, the last being on the 1st of November. There are only two sections: Single operator Fixed or Portable, and Listeners. For further details of these events see February RadCom page 67.

Special event stations this week include:

GB2OWM which will be aired during the Orkney Science Festival from Friday the 10th to Thursday the 16th of September on the HF bands. The station is situated at the Orkney Science Museum at St Margaret's Hope on the Island of South Ronaldsay. Further details from Bill, GM3IBU, who is QTHR. GB0RAF will be aired from the Lincoln Hamfest on Sunday the 12th, mainly on 80 and 40 metres. Some operation may take place on Saturday the 11th. RAFARS invite those purchasing radio equipment at the Hamfest to have it functionally checked free of charge by G4NVD at the Special Event Station. Further details from G4NVD, QTHR or tel: 0472 871999.

And now the solar factual data:

We regret that, owing to the holiday not all the data is to hand. However, we do have data for the period from the 23rd to the 29th of August. With the more active side of the sun coming into view, a small magnetic storm developed on the 27th but quickly died out. From then on geomagnetic levels were quiet and good ionospheric conditions resulted. No flares have been reported during the period. The very low sunspot count rose every day and reached 64 on the 29th

with the mean for the period being 68. Though this is still a low count it is an improvement. The solar flux levels, which have not varied much day to day, averaged 89 units. The geomagnetic activity has been mainly quiet, except for the 27th when an SSC (sudden storm commencement) developed at 15.00 hours lasting to 21.00 hours. This lifted the Ap index to 17 units, about K5. However the other days were 'quiet to very quiet', being down to only 3 units on the 25th. The average Ap Index for the period was 7.5 units. The state has been 'nil nothing to report' throughout the period. The data for the radio quality indices is not complete but we know that levels rose to 'very good' up to the 26th with Fort Collins Boulder, New York and Tokyo circuits being up to 'excellent'. For those that use the solar rotation base map, published in the RSGB Call Book, the poor ionospheric conditions are now between Heliographic longitudes 180 to 90 degrees and the best conditions between 90 and zero degrees. The aa indices, as supplied by the British Geological Survey for the period 17th to 23rd August, saw the daily index decline every day from unsettled to very quiet levels, with the period averaging 17.4 nanoTeslas and the 23rd being only 5.8 nanoTeslas. The X-ray flux levels have continued to decline and averaged only A6.8 units for the period. It seems as though the X-Ray flux may turn out to be a more sensitive indicator of the cycle's decline than either solar flux or sunspots. The July monthly mean level of solar flux was 99 units and the Ap index 10; the smoothed levels for January 1993 were, respectively, 125.6 and 16.1.

Now the ionospheric data for Central France:

Not all the data is to hand this week but for the 24th to 26th, the F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged about 8.9MHz. The darkness hour lows averaged about 3.7MHz. Peak times are now about 19.00 hours and the darkness hour lows about 04.00 hours. There has been much spread-F during the darkness hours lasting up to 5 hours at times.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 6.6MHz. The darkness hours have been seriously affected by other phenomena making readings almost impossible. In part, this was caused by weak auroras. An idea of just where we are in cycle 22 can be gauged from the smoothed solar flux levels. During previous cycles the minimum went down to about the 70s, the present level is about 100.

And lastly the solar forecast:

This week, the more active side of the sun will be rotating away. Solar flux levels are expected to be about the 95s with geomagnetic activity quiet at first but being very disturbed by the 11th or 12th when there is a small chance of a weak aurora. The radio quality indices are expected to be above normal up to the 11th then declining to well below normal.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 U B and G7 R E series, and Novice calls in the 2 0 A G and 2 1 C G series.

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

1577. Re: Dual Band Handies?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-03 07:12:57 UTC
From: dtock@nyx.cs.du.edu

I can vouch for the Icom IC21E. I recently purchased this to replace my old Yaesu FT26. I specifically wanted a radio without lots of buttons (ie. without a numeric keypad) as I mainly use it in the car.

Compared to the Alinco and Kenwood models, it is a little less sensitive but I can live with that - the yaesu was too sensitive and often had problems using the 5/8 whip on my car. Against that, I can consistently access our local repeater from my work, which I could hardly ever do with the Yaesu despite both being 2W output!

Operation is quite easy, once you have worked your way through the _menu_ system for setting the various less common options --- The common ones such as changing power, memory operations repeaters etc are on the (few) buttons that are present.

On the subject of repeaters,
here in the UK we use a 1750KHz tone to access repeaters. This is a little awkward, requiring a button on the front to be pushed while the PTT is depressed -- almost impossible one handed. CTCSS operation would be OK.

I miss the UP/DOWN buttons - the only way to change the frequency or memory is via the knob on top. I miss the lighting on the buttons at night - it makes them look pretty, but it is simple enought to operate by touch.

I like the separate on/off button - no fiddling with the volume control to turn the power on and off - plus auto power off. I like the 16mW output level - fine for local repeater work and terrific battery life. I like the 50MHz - 999MHz coverage (including AM airband) - not usually documented.

At a recent Fox Hunt (I came second using the IC21) we had chance to compare equivalent Icom/Alinco/Kenwood models. They all do pretty much the same, but in different ways. Choose the one you like the look of, or the one that makes the things you want most accessible.

David (GM0SYA)

1578. Re: It's been almost 8 weeks - should I call?

Once high level RF gets into the box on a cable heading for the
main/IF PCB it can do anything !

You could try some rf filtering in the plug for the ACC socket, you
certainly don't need RF bandwidth on ant inputs/outputs to a TNC.
I hate DIN plugs, the shell contact may be iffy, so you may need a thick
ground connection to somewhere trustworthy on the set.

My radio on CW with hot RF in the shack could lock up in transmit
mode, due to pick up on the key lead.

This is the sort of problem that responds to "abit of improvement
here, a bit there" try some screening, some filtering and also reducing
the field in the shack. To try to fix by only one method could require
heroic measures.

Cheers
David GM4ZNX

1581. Re: Re IC765 speech processor problem.

The PSU in my 765 talks on transmit, it's a switcher and responds
quite quickly to the LF components of the power demand following the SSB
and I can hear what might be magnetic core/ winding movements speaking.
There is also a little noise that seems to be from the speaker itself

Cheers
David GM4ZNX

1582. Re: Non-licensed purchase of radio

Hello

Is it possible to use a Baycom compatible modem with the Amiga Computer ?
Is it possible to use a BBS sytems developped for the Baycom modem.
Is it possible to run NOS like program and a Baycom modem ?
where can I get the drivers to drive a Baycom modem on an Amiga ?

: The Questions are:

: 1. Should I just wait another few weeks?
: 2. Write them.
: 3. Call them.

Why not just be patient a couple of more weeks. After the 8 week point you
can legitimately start expecting your ticket in the mail, but not before.
If the FCC is in a busy period, it could go to 9 or 10 weeks possibly.
After 10 weeks, it would be appropriate to call, just to make sure your
application is indeed being processed, and not lost in the mail. K4ADL

A friend took her test on June 15 and was similarly distressed because
her license arrival seemed to take forever. This past Saturday (8/28), she
received her license. Looks like about 11 weeks right now.

>73, Cliff Walker, ZL2ALY, Wellington, NZ

Last year, I invited my son's Cub Scout den over to my house, where we made
a handful of JOTA contacts (not a lot of stations, but the few we talked to
spent a decent amount of time on the air saying Hello to each of about a dozen
tongue-tied boys in my shack--these kids usually can't clam up; watching them
get all bumbled up on the air was cute!). Anyhow, we heard a few YLs in JOTA
QSOs. The event is listed as open to all Scouts, Scout leaders, former Scouts
and anyone else who wishes to join the fun. Let the females jump right
in--it's just more people to talk to, and the males definitely love meeting
girls on the radio--even the grade school crowd! 8-)

I plan to try to get them on again this year. We'll try 10, 15,
20--wherever we hear activity! Hope to catch you on for JOTA Oct 15-17!

Hi Kirk:

There were two types of Pulsar radios; a long green painted one with a long heat sink on the end, and another that was shorter, and grey. The shorter one had a solid handle, the longer had a pull-out T handle.

Neither are easily reprogrammable because of the difficulty of supervisory board modifications. The green ones (now that I think of it, the green ones were 1414's) had channel elements, the grey ones had software controlled cchannel selection.

They also used a triselector instead of a duplexer, which was virtually impossible to tune.

I would not bother with it, but if you find something to do with it, let me know, since I have about six of them sitting in stock.

I know that not all repeaters are covered, even in SD. It looks like they have tried to eliminate "private" repeaters. The map for California is divided into North and South, they have seperate maps for 2 M and "other" and the maps are still pretty busy. I'll bet they still only have what are considered the "major" public repeaters (what ever major means in this context). I still like it - I'll carry both the mapbook (for quick reference) and the ARRL guide (for completeness)...

You get no sympathy from me pal.

Nor do any of the netters who have complained about delays for a few weeks
in getting their licenses because of VE or VEC induced delays.

If you've never conducted a VE session (or even participated as a VE as in your
case) you don't understand all of the problems, especially if it is one of your
first few sessions.

Be EXTREMELY happy you don't have to go to an FCC office for your license as
I had to for my Technician Class ticket long ago.

If you don't like the extra waiting time during the session, or the extra
weeks it takes to get your license/upgrade, then you should have upgraded
sooner and you would have had your license/upgrade sooner!

>
>(By the way the noise is slightly stronger (vs the signal) with the
>cans on.)

I have the kit as well and have used it extensively over the last month or
so. I have no complaints! It is a terrrific asset for SSB communications.
I have used it a little bit for CW, but not much.

Quantics has a warantee policy.... HOWEVER, because of bad experience with a
lot of "warantee" returns which turned out to be nothing other than poor
solder joints on the pc-board, they have instituted a policy which requires
that you send a $40 check with your warantee return. If it is truly a
warantee problem, they will repair it and return you check with the unit.
If is is a construction problem, they will repair it for you but keep the
check as a repair charge. Since, I am not experiencing any "noise" with my
unit, I think that you have some kind of malfunction.

Hope this helps....

[It's Hamfest Time Again!]

28th Annual Melbourne (Florida) Hamfest - Saturday and Sunday - September 11/12

Melbourne Auditorium on Hibiscus Blvd. (first stoplight north of US 192)
just west of US 1 - about 3 blocks. Talk-in on 146.25/.85 repeater.

Registration

$4.00 advance/$5.00 at door per person, both days.
Tickets will be held at door.

Swap Tables

150 swap tables available in air conditioned auditorium
$10 one day/$15 both days
Limit 2 adjacent tables per request
For info on table availability contact:

Melbourne Hamfest
Gus Williams, N4UDL
511 Eleutheria Lane
Melbourne, FL 32937

Outdoor Tailgating (in front of the Auditorium)

First 10 feet free. One registration ticket required for each
additional 10 feet. (this is a change from last year).

Hotel Accomodations

Melbourne Hilton, 200 Rialto Place, Melbourne, FL 32901-3092
(407) 768-0200, FAX (407) 984-2528
Hotel is 4 stoplights west of hamfest on Hibiscus Blvd.,
then north on Airport Road to 2nd stoplight.

$50.00/room - mention hamfest.

Transportation will be provided between the hotel and the hamfest.

Commercial Booths

35 commercial spaces. Please write for more information and
include your phone number.

Programs

* Phase 3D Amateur Radio Satellite overview by Dick Janssen, WD4FAB

* Overview of current OSCAR Satellite operations by Reid Bristor, WA4UPD

* VP8SSI DXpedition presentation by Al Hernandez, WA3YVN
(Al was one of the operators at VP8SSI in the South Sandwich Islands)

* DX Cluster users meeting by Eric Smitt, K9ES, and Skip Rockwell, K3ARV

* Florida Phone Traffic Net Luncheon on Saturday

* Florida Traffic Handlers Breakfast on Sunday

* Military Affiliated Radio System Meeting

* Lightning Protection Seminar presented by Burt Bittner, K0WGN

[Programs are on Saturday and are held at the Hilton...]

NOTICE: In support of FCC regulations prohibiting the sale of uncertified equipment and illegally modified electronic equipment, PCARS will not tolerate or permit this activity during the hamfest.

==========

The Space Coast Amateur Technical Group will be putting on the Unbanquet Saturday night of the hamfest. Details will be announced at the hamfest - look for the flyers. Probably Ryan's Steak House on Babcock Street south of Florida Institute of Technology again ... 7 PM probably. Last year we were honored by the presence of Mach 25 recording artist Fred Becker - quite possibly he could be back since the Filbert/Becker "Enterphase" project should be released right around then. It was fun and expect it to be so again this year.

We're thinking this year's theme should be "25 Years of Incentive Licensing".

Nope, don't need to carry no callbook. A new date would also be on a recent renewal. You just claim credit for the 5 wpm and the VEC and FCC will have to verify it. The FCC is supposed to keep records which indicate who has the 5 wpm technician credit even tho the license doesn't. They created this problem so they have to live with it. So: do send a 610 to the FCC requesting a replacement for your lost ticket, and go take that exam explaining that you lost the original and you're waiting for the replacement. The VEC will hold everything (they will send you mail confirming that and handle it all through the mail with you) GOOD LUCK!!

In a way, then, the advent of DSP could be the salvation of these modes. In a DSP world, if someone comes up with a nifty new modulation scheme, you get new software and you're on your way.

One of these days, I wanna try building a digital SSB system. Use a low IF (say 70 KHz or so), with either phasing or Weaver modulation and detection in DSP software. I'm particularly intrigued by the Weaver method, because it requires `brick wall' filtering at AF, control of both phase and group delay, but only very limited bandwidth -- seems that even a slow DSP processor could do it. Anyone done this one yet?

Hello

Is it possible to use a Baycom compatible modem with the Amiga Computer ?
Is it possible to use a BBS sytems developped for the Baycom modem on an
Amiga ?
Is it possible to run NOS like program and a Baycom modem on Amiga ?
where can I get the drivers to drive a Baycom modem on an Amiga ?

Thanks a lot.

>
>Can anybody tell me for sure?

That's what the Communications Act of 1934 said. But now there's a new law called the ECPA, Electronic Communications Privacy Act, that makes it a crime to even monitor the cellular frequencies. The FCC is now acting under mandate from Congress to make it illegal to manufacture, sell, or own a scanner that can, or can be modified to, receive the cellular frequency range. That goes into effect next year. This is a dramatic change in communications law.

>Hello there.

>Do any of you have any antenna or RX schemes to reduce the awful noise
>on 40 M. Yes, in the winter it's quieter, but still the noise is there.
>Is there a Polomar loop, or something you can buy to quiet it down?
>I hear ZL's early in the night over here and would like to hear them better,
>along with my East Coast friend.

>I use a vertical, but my 560 foot loop also is having noise problems.

Hi Marc! Good Grief...a vertical, though a good DX antenna due to its low angle of radiation, will pick up more man-made noise than anything you can use. And how does a 560-foot loop relate to 40m? Try a version of the diamond-shaped sloped loop in the ARRL Antenna Compendium. It works well during the grey-line time, but a full wave delta loop seems to work as well. Put the apex up...don't put it down as some of the popular DX books say...all that does is fry earthworms.

>At present, I turn the RF gain down and click on my DSP kit, but
still...

Gee, if that's the DSP kit that I saw at the NE ARRL Convention, it should do a great job of cleaning up signals....but youstill need to do some antenna work so that the other guy can hear you. I have seen phased verticals used to get some directivity on 40m....but it would be better to get a flatside beam to get away from the noise...just operate CW <G>

DX Bulletin 46 ARLD046
~From ARRL Headquarters
Newington CT September 1, 1993
To all radio amateurs

SB DX ARL ARLD046
ARLD046 DX news

Thanks to Paul, KB1BE; the Connecticut DX Association Net; the YCCC PacketCluster Network; Bob, W5KNE; QRZ DX; and John, KB1T, for the items in this week's bulletin.

WAKE ISLAND. After a 24 hour delay, the Cal/Poly Group was spotted Thursday on 14214 kHz at 1309z. Keep an eye on your local PacketCluster for WH9/KC6CEX.

CAMBODIA. Mike, VS6WV, has been worked as XU6WV on 18080 kHz CW and 14194 kHz SSB between 1130 to 1400z. A PacketCluster spot shows XV7TH on SSB on 14195 kHz around 1400z.

MONGOLIA. JT1CS and KB9IBZ are signing JT3SDX. They have been worked between 14025 and 14030 kHz around 1300z. QSL via JR0CGJ. JT1BR has been worked grayline-mode on 7011 kHz CW around 1138z.

CHAGOS ARCHIPELAGO. VQ9QM has been on 17 meters lately. Check 18069 kHz around 1530z.

QATAR. A71A was worked on 21201 kHz at 1530z.

SOMALIA. Rob, N3HQW, will begin a six month stay starting in early September, and has made arrangements to operate as T5/N3HQW. He will be on 20, 15 and 10 meter SSB. QSL via WD4NGB.

GHANA. Randy, K0EU, continues to keep 9G1XA very active, though now most spots show up for 160, 80 and 40 meters. Check 1827 kHz around 0545z and between 2300 and 2400z; 3505 kHz between 0145 and 0200z, and 0500 to 0600z; 7023 kHz from 2330 to 0100z; 18072 between 2100 and 2200z; and 24893 kHz between 2200 and 2230z. QSL via K0EU.

CAYMAN ISLANDS. K6URI will be operating as ZF2VA September 5 through 17.

EAST KIRIBATI, aka LINE ISLANDS. Listen for the T32BE and T32BI operation expected on from September 8 through 13.

SAINT PAUL ISLAND. The CY9R operation is now active from the northern-most island. They were spotted on 7009.5 kHz at 2148z. QSL VIA VE3MRN.

MALAWI. 7Q7CE will be active until September 10. 7Q7XX has been worked on 18079 kHz between 1900 and 2300z.

WALVIS BAY AND PENGUIN ISLANDS. If you haven't worked either of these, it would be a good idea to work them ASAP if they become active. The DXCC status of both Walvis and Penguin could come into question, should South Africa turn them over to Namibia.

THIS WEEKEND ON THE RADIO. The All Asia Phone Contest, sponsored by the Japan Radio Relay League, starts at 0000z Saturday and runs for 48 hours. The exchange is signal report and two digit number denoting your age. For more information see page 117 in June QST.

The LZ DX CW Contest, sponsored by the Bulgarian Federation of Radio Amateurs, is a 24 hour event which starts at 1200z on Saturday. Check page 103 of August QST for details.

And according to the 1993 KB1T Ham Photo Calendar there are two other events worth noting. The DL QRP 40 Meter CW runs from 1300 to 1600z on Saturday. The 24 hour RSGB Field Day Phone event starts at 1500z Saturday.

Not long ago, I brought some club hamfest flyers to a local Radio Shack store, and requested that they be posted or placed on the counter for interested customers. The store manager told me that it was "against company policy to display that stuff, but that he could keep it under the counter and hand it out to anyone who inquired about ham radio or local activity." I knew that was baloney, because I had seen some kind of official company marketing newsletter sent out to all stores (they send these out at least monthly), at about the time they introduced the HTX-202 2-meter hand-held rig. The memo encouraged all stores to help promote local ham clubs, classes, exam sessions and hamfests.

I recently spoke to Tony Magoulas, who's a big shot in marketing at Radio Shack's headquarters in Ft Worth. I was trying to locate a copy of this newsletter/memo, which he recalled was definitely sent to all Radio Shack

stores at one time, and a further memo that had gone out later (I think that was around the time QST published the letter from Radio Shack VP of Market Planning Ed Juge, W5TOO, rebutting implications that Radio Shack wasn't properly informing its employees and customers about the proper use of ham gear). In fact, Tony told me that Ed was in his office while we were talking on the phone!

Tony told me that he wasn't sure if he could locate the original store newsletter, but that he did have some document that had been sent to all stores, which said essentially the same thing. The message also clearly spelled out that customers should be advised that an FCC Amateur Radio license was required to transmit with the ham rig, and if the customer wanted more info on licensing, it was hoped that the store would know of a local club or two to refer the customer to.

Tony said he'd try to dig up the actual document and fax me a copy. When he does, I'll post the text here. Might be worth scanning into a .GIF or .PCX file that people could download from BBSs and print their own copies to bring to their local Radio Shack stores if the store personnel has its doubts about "offficial Radio Shack policy" concerning such issues.

>Rather than lose you as a customer Bob, I'm sure the store manager
>would like to speak with you. If not the store manager, then the
>district manager. As I said, it's not company policy to treat people
>poorly. Though I ought to add... It's against company policy to
>promote your radio club....

Who told you so? It's not true, according to Ed Juge, W5TOO, and Tony
Magoulas, in Marketing at Tandy/Radio Shack Headquarters in Ft Worth. Quite
the opposite, in fact! The honchos in Texas strongly encourage local stores
to develop and maintain contacts with local ham groups and to help promote
them when possible. That information has been put in writing and sent to
all stores in at least more than one general sales letter/memo from Ft Worth.

>Regarding the company's "attitude toward amateurs," I doubt that there's
>any attitude...The reason there's Amateur Radio equipment in the stores is
>because the powers on high believe they can turn a profit by selling them...

And they understand that they need the support of the ham population
to enjoy any degree of success, because hams quickly spread the
word--good or bad--about any company that markets ham gear. They know this
and are careful to try to do their best to urge stores to support local
clubs to keep amateurs from beating up on them because of a few anecdotal
experiences with poor sales representatives in some stores. If a Radio
Shack store manager or district manager doubts this, have them call Ed Juge
at Radio Shack corporate HQ in Ft Worth.

TB>On a somewhat related note, I was told by a Radio Shack manager that they
TB>are instructed to refuse to sell you a scanner if you ask or say anything
TB>about monitoring cellular. Why are they so cautious about that and yet
TB>sell amateur, marine and itinerant/GMRS tranceivers without even
TB>mentioning licenses...

I worked at a 'Shack as a seasonal salesperson a few Decembers ago.

They have a strict policy of not selling equipment when the customer
indicates an intention to use it for illegal activity.

One example they gave during training was this:

If a customer comes in and buys an automatic telephone to tape recorder
coupler, they just sell it. But, if the customer says he wants to
record his wife's phone calls without her knowing about it, they must
refuse to sell the device.

Another example was given with their (at that time, new) marine
handheld. If someone came in and said they were going to use it for
something other than maritime use, they have to refuse the sale.

They were very clear about this, and the consequence is termination of
employment. I'm sure the same would apply to amateur and business radio
products as well.

But, there salesmakers are paid by commission, and it would not
surprise me if this policy is violated from time to time.

> "An examinee is required to present both a photocopy and his or her
> original FCC-issued license. [Just like Marc G. says above.] In
>
> ...
>
> "Original license. The FCC also instructs the candidate to
> present the team with his or her current ACTUAL, ORIGINAL, SIGNED
> amateur licnese, if the candidate holds one."

Ok, so if you show up in person you have to show them your original...
(read on)

> that on the candidate's Form 610 and, if necessary, contact the
> FCC for confirmation of the information. (See "Issuing CSCEs"
> later in this chapter.)"

Huh, but if you mail it in later you only need to show them the copy???
Seems like they could have taken the copy while you were in front of them
and saved you a stamp.

I think there are a couple of things missing. 1> the above exception is
primarily to cover the time periods when a person is waiting for the license
to arrive in the mail. This happened to me. I took the novice test, then
while waiting for it to arrive, I went back and passed all the elements
needed to upgrade to Advanced. In this case the VEC could not send in my
610 within the 10 day period, but had to hold onto them in a file until
my novice ticket arrived. Then after I mailed them a copy of my novice
license, they preceeded with the paperwork and sent in my 610 for the
upgrade to advanced. This VEC group has never seen my original license.

2> If you deal with the same VEC group, and they recognize you, and they
have seen your license, or were the original VEC that processed your first

license then they will likely let you get by with just a photocopy. They already have the records to proof that you are a valid licensed ham.

|> year. This is a dramatic change in communications law.
|>
|> Gary

Close, but no cigar. The FCC made a ruling based on the recent legislation and these are;

o As of April 26, 1993 no scanners will be approved by the FCC if they are deemed to be easily modifyable to receive cellular by adding or removing a simple component such as a jumper, diode, resistor or chip. This would seem to allow complex restorations but don't expect Uniden or GRE to risk trying to slip one by.

o As of April 26, 1994 easily modifyable scanners and converters which can be used monitor cellular may not be IMPORTED or MANUFACTURED.

o I seem to remember there being additional verbage regarding not monitoring encrypted/encoded/scrambled signals. This is undoubtably done to make the new 'secure cellular' officially illegal to monitor before it even hits the streets.

Note that there may be loopholes that you can expect to be plugged, such as what if you came out with a non-scanning receiver (which are exempt) which is modifyable to scan? What about ones that are complex to restore?

Note that the law does not make it illegal to buy or sell such a scanner so RS and Uniden could certainly stock up on them prior to April 26th and keep selling them until they're gone - but about the time they do that,

the FCC would make a further ruling regarding selling them.

Although the law does not specifically address radios with double conversion (read: nearly all scanners) being able to monitor cellular either 21 Mhz above or below the original signal, I have heard rumblings that RS will drop all double conversion 800 Mhz scanners by April 26th and all new 800 Mhz scanners will be triple conversion - to make image listening more difficult.

Yet another example of cellular lobby dollars at work. I can't wait till the cellular lobby realizes that amateur phone patches are costing them money in lost sales - they'll want to outlaw phone patches, and they've got the money to do it... (only half serious here)

Please do not propogate any rumours about cellular capable scanners being illegal to own, buy or sell. That would make the cellular lobby very happy, but it is simply not true. For now...

>3. Call them.
I would suggest you just wait. Calling the FCC won't accomplish anything and they won't be able to tell you much. The latest I have heard, it's a 13+ week wait for licenses. Be patient -- I know what you're going thru, I past the tech+ 4 weeks ago.

Soccer football is played as you describe, but rugby football is played
by men with odd-shaped balls :-) (And they can all use their hands)

Note that the soccer world cup finals are due to be played in the US next
year so you had better get used to it!

|>

I think you better check this one out. I have all of my original licenses and I took tests directly from the FCC. My wife has all her's as well and she took all her tests from VE's. I would never surrender the original. It is the only proof that I ever passed any test. You can see it if you insist, but all you get stapled to the 610 is a copy.

As further evidence, I submit the following from Part 97.13(c):
Application for renewal and/or modification of an amateur
operator license shall be submitted on FCC Form 610 and shall be
accompanied by the applicant's license or a photocopy thereof.

Seems pretty clear to me. A copy is OK for the FCC, I don't see how a VE can expect more.

These map books did not look too good to me. They listed a lot of the little local-coverage machines in our area, but did not mention 146.97, which is the wide area machine in Worcester. Since 97 is the repeater people travelling through the area would most benefit from, I really had to wonder.

Now it is entirely possible that this omission is the only one in the book, but since I am not as familiar with other area (hence the interest in such a book) how can I be sure the appropriate repeaters are covered elsewhere?

1623. NiCad Question - When to give up?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-03 18:47:09 UTC
From: tjf@beta.lanl.gov
Message-ID: <1993Sep3.184709.29783@newshost.lanl.gov>
Source record: 276946

Hi...I picked up a couple of salvaged "CareFree" 12 Volt Marine/GP Batteries for $0.20 a pound. When I got them home and hooked them up to my charger, one went to 11 Volts and stuck there, another is stuck around 3 Volts. Any tricks I might try to jolt them to life or did I lose $4? ;^)

Any helpful advice appreciated. I suppose I could use the lead in them to cast fishing lures....

In article <5297.9309031400@ua.nrb.ac.uk> pdu@unixa.nerc-barry.ac.UK (Paul Jimbo Duncan GW7KES) writes:
>Please excuse my ignorance, but being a class B Licensee (50MHz and above)
>I rarely go on the HF bands. Can someone explain to me what an "APLINK" is?
>

APLINK: Amtor Packet Link. An APLINK is a BBS type systems which is accessed either through a local packet VHF port, or via AMTOR on the HF bands. These systems scan multiple frequencies on HF on many bands looking for a signal calling them. They NEVER transmit unless in response to a connect request or a local operator (owner of the APLINK, present at the control point) request. The systems have generally been run with a UHF control link available so that the stations are under remote control, not semi-automatic.

APLINKs are responsible for moving a large amount of NTS traffic, especially internationally. The May 1991 QST has a good article about WA1URA and others who helped out the Gulf War effort by using APLINKs to exchange messages with a fellow in Kuwait City.

Many of the APLINKs will now handle connect requests in PACTOR as well as AMTOR. For those wanting to find APLINKs, note that the frequencies given for operation are the MARK frequecy, NOT the SSB center frequecy. If you have a rig that does FSK, then it will likely display the MARK frequency for you. If you are using LSB and AFSK, you'll have to do some math...

73,

Dan N1JEB

The was a problem in the first generation of the PC layout. I'm not sure if this is what you are describing or not. The symptom is a constant, high-pitched whine. The frequency of the whine is different from filter to filter, as what causes it is leakage of the sample clock from the digital circuitry into the output audio filter/amplifier circuitry. You can get rid of nearly all of it by cutting the PC trace that carries the digital signal (cut at both ends) and using a small length of hook-up wire to reroute the signal. (Seems to me this info was shipped with the kits; at least, it was with the one I bought last December.) All of the documentation I have is at home, or I'd give you exact references to the signals.

If that's not the problem, I dunno what the fix is.

I have some easily performed mods for FULL UHF receive (not just
the amateur 70cm band) and out-of-band transmit (CAP/MARS).
Note that AM aircraft band receive is a standard feature of the
TH28A. Read the manual.

I mailed these to the above party. If anyone else would like them,
send Email.

Unabashed plug: Alinco service is fast, friendly, and as good as
it gets. BTW, check your guarantee: you may still be covered.

Another BTW: you don't need any pre-authorizations. etc. Just
pack it up with a description of the problem and info on how they
can get back with you.

1631. Any interest in a DSP conference?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-03 19:45:02 UTC
From: jbloom@arrl.org
Message-ID: <2175@arrl.org>
Source record: 276959
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew

Some of us here at ARRL HQ have been discussing the idea of
putting together a conference, probably for next year, on digital
signal processing in Amateur Radio. This would be along the
lines of the ARRL Digital Conference (nee Computer Networking
Conference), but focussing on applications of DSP to ham radio.
I've little doubt that we could get people to attend a
conference like that, but I'm not sure whether we could get
people to submit papers for it. There's not much point in having
a conference unless you have presentations! Since many of the
possible DSP applications apply to digital communications, there
may be some cross-over between the existing Digital Communications
Conference and the proposed DSP conference, too.
So, I'm sounding the waters... are there folks out there who
would be interested in submitting papers for such a conference?
And are there any Amateur Radio organizations (clubs, etc) that
would be interesting in hosting same? Or is this a dumb idea?
Please let me know if you are interested.

Marc, I, and a LOT of other hams are satisfied and happy users of
the DJ-580T radio. There are two of them in my family, bought only
after careful research and comparison. The second one came about
for me because of the great satisfaction my wife was getting out
of hers! And YES, we've used other brands, including a Standard
Dual-bander.

Do not let Charlie's sour grapes spoil what _may_ be your choice
radio. DO enjoy what you get based on what you want in features
and compared on a price/performance basis against your budget.

Well, not exactly. Nobody is REQUIRED to ask to see a license before selling
a radio (or a car, or an airplane, or a number of other things which
require a license to operate), but the store CAN (and many stores do) ask for
anything they damn well please before selling to you, as long as what they ask
for doesn't discriminate on the basis of one of the "protected characteristics"
such as race or gender.

: based on NiCd's and had a trickle charger...

Marc,

For special events, I've built a battery pack for my HT out of
1" grey PVC conduit, which has an inner diameter the same as the outer
diameter of alkaline C cells. I use 10 C cells, which provides 15V
(13.5V when heavily loaded with 1.2A going into my HT in high power mode).
If you don't drain it too fast, you can get 4AH out of alkaline C cells.

Here's advantages of alkaline cells:
* Initial Battery price cheaper
* Shelf life better (years instead of weeks) Alkalines don't
really have a self-discharge problem.
* Higher energy per unit volume or unit weight (2X is
typical.)

Disadvantages: * Not rechargable
* Maximum current drain is significantly less than a
similarly sized NiCad (10X!)
* Don't work as well in cold weather as NiCads. Alkalines
have a big difference in power between 70-degrees and
32 degrees F.

The pack is trivial to construct, and only requires materials available
at any hardware store (except the power connector to your HT).

Before I describe it, I want to mention something I tried first that didn't
work: I bought a bunch of Radio Shack 'C' cell holders (those flimsy
plastic things that hold 4 C cells.) Here's the problems with those:

1. The batteries pop out easily (this can be fixed by taping the
batteries in with electrical tape.)
2. You need 3 holders to get 10 batteries (not realy a big deal,
but you have to bolt the holders together or put them in a box)
3. The wires coming out of the holders are VERY thin and fragile. They
also have measurable voltage drop with more than 500ma going
through them.
4. The springs used to hold the batteries in place have a lot of

resistance. YOU CANNOT PUT C NICADS IN THESE HOLDERS!
If you run a couple of amps through them, which NiCads will
happily deliver, the springs will melt right through the
plastic holders.

Without further adieu, here's what my C pack looks like:

```
__I_____________________________________________________I__
I [ }[ }[ }[ }[ }[ } S [ }[ }[ }[ }I
__I_____________________________________________________I__
I I
```

The tube (_) is about 21 inches long, - just a piece of 1" grey PVC conduit.
The batteries [} are alkaline C cells. I've run a number of tests with
a home-brew digital battery tester, and found Duracell and Eveready to be
better than Ray-o-Vac. There are two bolts, marked "I", one at each end of
the tube. The bolts can be almost anything from 6-32 up to 1/4" .
Make them long enough to bolt on your power lugs. Here's the
Secret trick: The letter S up above is a spring, which keeps tension
on the batteries. I got this from an old 6V lantern battery. Just snap
it off with needle-nose pliers, and load it in the battery pack when you
insert the batteries. Put the wide end of the spring towards the positive
terminal on one battery, and the small end of the spring pushing on the
negative terminal of the next battery in the tube. If you have an old
lantern battery to destroy, you'll have a spring and a spare. Otherwise,
just buy the cheapest lantern battery you can find and remove the springs
(around $5).

When constructing, measure the distance between the bolts VERY CAREFULLY.
If not, your batteries won't fit, or will be too loose. I recommend
drilling the hole at left first, then insert a bolt. Next install the
batteries and spring. Now, measure where the positive terminal on the
top (right) battery sits with the spring compressed and uncompressed. Drill a
hole for the rightmost bolt such that it will compress the battery to
about half-way between the two limits. When measuring, remember that the
battery pushes on the edge of the bolt, not the center. Also, try and
drill a hole which is exactly the same diameter as the bolt you're using.
My batteries fit perfect on the first try.

I built one of these in half an hour last weekend, and took it on a
mountain climb to 14,000 ft. It got knocked around a lot, and
worked great. It's got to be the most rugged battery pack you can have.

With my HT on high power (5W), I can get 2.5-3 hours of transmit time out of
these batteries (and infinite listen time).

Hope this is useful!

Greetings,

I am helping my nephew get his Ham radio license (Novice/technician) but it is a bit more difficult being a long days drive apart from him. If there is some kind Elmer living on the westside of Columbus, OH who could contact me with info, I could get him in touch with you so that he can actually beat me getting the license. Here is some important info to help you decide:

Age: 13
Zip Code 43204 (Hilltop area)
Columbus, Ohio

Get in touch with me if you are able to provide a bit of time and support for him and for an uncle who cares to follow up on the spark of interest I saw when this young man visited me last month and saw his first ham fest (can you believe he didn't know what ham radio was !!! :-)

Much appreciated in advance.

John A. Evans, Capt, USAF "My number one goal as a
VHDL/EDA Engineer runner is to live long enough
Ft Meade, MD 20755-2604 to place in my age group!!!"

I've seen three ads for products in the last issue of CQ (August? July?) I can't remember if I ever got my August one (probably got swiped along with the rest of my mail)....I know I only got the August 73 a couple of days ago. Darn 73 subscriptions to Canada.

One was the Quantum Ham Battery, another was the PowerPack (basically a smaller version of the one I picked up at the local hardware store....there was a review in some old issue of 73, I think), and another that I don't remember.

I've only used mine a couple of times, and it was pretty good. Once I was in a bad location and needed 5Watts to get the signal to crawl out. Another time was during a power failure.

1640. ALERT: 03Sep93 Minor Geomagnetic Storm Alert

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-04 00:36:27 UTC
From: oler@rho.uleth.CA
Message-ID: <9309040036.AA10124@rho.uleth.ca>
Source record: 277001

/\

MINOR GEOMAGNETIC STORM ALERT

ISSUED: 00:00 UT, 04 SEPTEMBER

/\

ATTENTION:

Geomagnetic activity has been moderately enhanced over the last 24
hours. Activity surpassed the minor storm threshold at 24:00 UTC on 03
September (or 00:00 UTC on 04 September). A well-placed extension of the
northern polar coronal hole is responsible for this unexpectedly geoeffective
disturbance. Most regions are seeing predominantly minor storm conditions.
Periods of major storming will be possible over the high latitude regions
over the next 24 hours. Recent observations suggest the disturbance may be
intensifying slightly.

HF propagation conditions have destabilized over the middle, high, and
polar latitude paths. Night-sector paths could see periods of potentially
strong fading, absorption, and multipath activity for the next 24 to 36
hours. Improvements are expected on or after 05 September.

This disturbance should begin to subside later this UTC day (04 Sept),
but may persist into 05 September.

** End of Alert **

...not that RS is likely to do that anyway. For instance, I walked into the
Shack and point-blank told the salesman I didn't have a license (I didn't tell
him I'd just tested for it the day before).

His response? "Oh...will that be cash or charge?"

>ago.

Ditto...it's nasty (though I imagine it'll get worse as time goes on), but if
you call the FCC, then you're just taking up the time of the people who pro-
cess the 610's. If rumor is true that they only do it on Tuesdays, then the
time the processor spends looking for your file and talking to you probably
would mean that at least 2-3 people will have to wait *another* week to get
their ticket...which means they'll call, and another 6-9 people will have
to wait at least another week for *their* tickets...and sooner or later,
nobody's getting their tickets on time because the nice lady who processes
the 610's is always answering the phone and doesn't have time to do any
processing....and amateur radio as we know it is over with because you
called the FCC to inquire about the status of *your* ticket!

Pretty big load of guilt to bear, eh? ;-)

Peace es 73 de Doug N0Y??

Satellite, shortwave and other electronic media news from Radio Sweden.

This week's bulletin was written by George Wood.

Packet Radio BID SCDX2186

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS:

SWEDEN--The major media debate in Sweden right now is the dubbing into Swedish of the American animated cartoon, "The Simpsons" by the private broadcaster TV3. Traditionally, Scandinavian television broadcasters subtitle foreign programs. The only exception are cartoons for children. TV3 claims that carrying "The Simpsons" in English has excluded many young viewers.

This decision has been widely criticised. In a lengthy article recently, Sweden's most respected newspaper, "Dagen Nyheter" maintained that "The Simpsons" is a program for adults, as it satirizes many aspects of American life. The newspaper compares what it calls the "lobotomizing" of the program to dubbing Sir Laurence Olivier with a "half-decent ventriloquist".

TELEVISION IN SWEDEN--Sweden is the size and shape of California, yet has only three national television networks, and no other terrestrial television broadcasters. But there is room for many more stations. In comparison, to take the example of a small American city, in San Francisco alone there are 11 separate television stations.

The Swedish government has now commissioned a study into expanding the number of over-the-air channels. According to Lars Maren of the Swedish Ministry of Culture, modern technology permits a major expansion. Following the study, the government will decide whether to authorize new national or local transmitters. (TT)

TV4--Until two years ago, the only television signals on the air in Sweden were the two national public service channels. They have been joined by the private commercial broadcaster TV4, which also uses the Tele-X satellite. TV4 plans to expand its schedule to 24 hours a day. Initially, the station

intends to broadcast continuously from morning to evening by next year. The all-night gap would be filled by 1996. The only problem with night broadcasting is that for two weeks every Fall and Spring, Tele-X is in the Earth's shadow, and cannot be used during the middle of the night. This affects the 2 percent of the station's audience who cannot receive TV4 from terrestrial transmitters.

To counter this, TV4 is considering using another satellite. ("Dagens Nyheter")

TELE-X--Things are not going well for Tele-X in other ways. FilmNet has sold its 85 percent share of the satellite back to the Swedish government, and the Swedish Space Corporation. The private pay film channel bought its share last September, as part of the Conservative-led government's privatization campaign. The intention was that another satellite would be bought and co-located with Tele-X at 5 degrees East, in order to establish a Nordic satellite position in orbit. (TT)

But Norwegian Telecom outbid the Swedes and bought the only available direct broadcast satellite, Marco Polo II, which was then renamed Thor, and moved to 0.8 degrees West, alongside Intelsat 512, which also carries programming to Norway.

On August 30th the FilmNet Movies channel left Tele-X for Thor. According to "What Satellite TV" magazine, FilmNet decided to sell its share of Tele-X when the Swedish Space Corporation refused to move the satellite to the same position as Thor and Intelsat 512. ("What Satellite TV" and TT)

Unfortunately the Thor porject thus far borders on disaster, as the Norwegians insist on using the obscure D-MAC and Eurocrypt S systems, making what is supposed to be a Nordic satellite only available to Norwegians, and depriving satellite viewers in the rest of Scandinavia of CNN, Eurosport, FilmNet Movies and soon the Children's Channel.

The only advantage for Nordic viewers is that when FilmNet Movies left Tele-X the satellite could be restored to full strength for its broadcasts of TV4 and TV5 Nordic. (Bertil Sundberg in "Paa TV")

NORWAY--The Norwegian government is scrapping a demand it made to broadcasters requiring them to scramble television alcohol advertisements carried on cable and satellite television. The climb down was made by Norway as part of its negotiations to join the European Community. Previously CNN International had run in with Norway's rules after it was asked to erase commercials for alcohol. ("SatNews")

EUROPEAN MEDIA NEWS:

ASTRA--More broadcasters are appearing on the Astra 1C satellite. On (or just before) August 27th, in connection with the opening of the big electronics fair in Berlin, Germany's MDR3, ZDF, SW3 and ARD all launched their services on Astra.

Mexico's Galavision has started test transmissions on Astra transponder 44.

UK Living launched on transponder 34 on September 1st. Despite reports of problems or delays, on September 1st Country Music Television also began its service, on Astra transponder 41, sharing the channel with Discovery.

The shopping channel QVC is also apparently no longer under threat, and has signed a lease for transponder 38, where it's due to begin broadcasts on October 1st.

Meanwhile, the influence of the new satellite is making itself felt. According to "Skyguide", in its first three days on Astra, The Discovery Channel blasted into the UK satellite ratings with an impressive 200,000 viewers for its Loch Ness update program.

Transponder 47 on Astra has been undergoing tests recently, thought to be in preparation for a new service. A number of broadcasters have been rumored for the channel, including HBO, Cinemax, and the Franco-Geman cultural channel ARTE.

Now it's reported that Sky is planning to lessen the impact of the increase in Sky Sports subscriptions by launching a second sports channel, understood to be free to Sports subscribers, and this would use transponder 47. If it goes ahead, an announcement is likely to be made very shortly, with the channel possibly starting later this month.
("Skyguide" and James Robinson)

RTL-5 has begun test broadcasts, using the out-of-band transponder 64, not 63 as previously thought. RTL-5 is currently relaying RTL-4, in the clear. RTL-5 is to launch with its own programming on October 2. (James Robinson) Instead, Filmnet is using transponder 63, and is now carrying some encryption tests.

TNT and The Cartoon Network will begin their test transmissions on transponder 37 on September 10th, one week before their launch. ("Skyguide")

The Adult Channel began broadcasts on Bravo's transponder 42 on September 1st. The channel will leave transponder 26 (home of Radio Sweden) on September 30. (James Robinson)

RADIO--The World Radio Network will begin its tests on Astra transponder 22, audio 7.74 MHz, beginning September 15th, with a full schedule beginning October 1st. (James Robinson) This will include the relays of "All Things Considered" and "Morning Edition" from National Public Radio in the United States, currently heard on WRN's transponder on Eutelsat II-F1, as well as a number of hithertoo undisclosed international broadcasters in English.

OLYMPUS--Europe has one less communications satellite. The European Space Agency announced August 26th that it has terminated the four-year-old mission of its troubled Olympus satellite, 11 months ahead of schedule. The ESA says it sent the satellite to a lower, non-operational orbit where it would not collide or interfere with other satellites. Olympus had started spinning and did not have enough fuel to return to its proper geostationary orbit. Olympus had carried broadcasts from Italy and relays of news from the Canadian Broadcasting Corporation, and was also used to test advanced communications technologies, including high-definition television. Two years ago the satellite's position had to be corrected after it went into an uncontrolled

drift around the world. (Reuters)

EUTELSAT--The Turkish shopping channel KanalMarket can now be found on Eutelsat II-F4 on 11.575 GHz. (James Robinson)

Eutelsat has decided to relocate its Eutelsat I-F1 satellite from 21.5 degrees east to a more easterly location to provide telecomms services from Russia and CIS republics to Europe. Eutelsat I-F1 is in its last stages of life, but it will provide service until replaced by planned Eutelsat launches. ("SatNews")

Eutelsat I-F5 is to relay two hours of Albanian television every evening, beginning in October. The costs are being covered by the government of Serbian province of Kosovo, which has an ethnic Albanian majority. Programming will come from Albanian Radio Television and Kosovo's TV Pristina. (Radio Tirana via BBC Monitoring)

HUNGARY--Antenna Hungaria, the Hungarian telecommunications company, says that it plans to launch a 16-channel European satellite called "Domestic" in 1996, offering Eastern Europe's first commercial satellite service. ("SatNews")

POLAND--Reports say that Rupert Murdoch's News Corp. is likely to be a leading applicant in the race to run Poland's first national commercial television network. Apparently News Corp. is considering applying jointly with the Polish Investment Consortium to operate a service. Under Polish law News Corp would not be able to take more than a 33 percent stake in the broadcasting venture. Poland currently has two state-run television channels. ("SatNews")

FRANCE--France's leading television station, TF1, announced August 26th it will launch the country's first all-news channel next year. Etienne Mougeotte, managing director of the private television station, told Le Figaro newspaper that the channel will carry French-language news updates every 15 minutes. It will also have "talk shows like on CNN". The station will broadcast via cable and satellite, he said. Mougeotte said TF1 would be the channel's sole operator, although it would consider cooperating with French pay television network Canal Plus.

Prime Minister Edouard Balladur has announced the government will begin broadcasting educational programmes over the defunct Cinq network's airwaves next year. The programmes will run until 7 p.m., when the Franco-German biligual cultural station Arte, launched last year, starts its evening broadcasts. (Reuters)

THE CHINESE CHANNEL--The Chinese Channel has been granted an ITC licence to uplink programming from the UK. The channel is thought to be planning to launch a European service in time for the Chinese New Year next February. Backed by one of the world's largest producers of chinese programming, it could broadcast overnight on Astra 1C until a full transponder becomes available. ("Skyguide")

THE TRAVEL CHANNEL--Landmark Communications Inc, the US media conglomerate which owns the The Weather Channel and The Travel Channel, has confirmed that it is to launch The Travel Channel in Europe early 1994. The Landmark purchase of The Travel Channel US last year has been followed by a new look and programming review.

Kevin Senie, Executive Vice President and Chief Financial Officer of Landmark Communications says: "The UK is a key market for us, and now that The Travel Channel is working well in the States, we're in a position to move forward very quickly. We believe that this is a clear and powerful concept that UK viewers will react to very positively.

"We will launch in the UK early in 1994 and in the meantime are making substantial progress with our development plans which also include Benelux and Scandinavia."

Since the launch of The Weather Channel in 1982 it has enjoyed considerable success. It is now watched in 54 million homes in the US, and noted a surge in viewer ratings. The programming specification for the Travel Channel in the UK includes broad lifestyle entertainment across all the pleasures associated with travel - action, adventure, culinary experiences and cultural insights. ("SatNews")

DIGITAL BROADCASTING--NTL and Eutelsat have completed joint tests to prove the viability of wideband satellite transponders for carrying both conventional analog FM television signals and the new digitally compressed TV signals of the NTL System 2000.

A single Eutelsat transponder was shown to be able to carry simultaneously either a single FM channel and four digitally compressed channels or a total of eight digital channels at broadcast quality.

The compatibility, within one transponder, of a high power analog transmission and lower power digitally compressed signals means that operators can more easily migrate from analog to digital, with its attractive cost reductions. Eutelsat says that its wideband transponders are especially attractive since the premium for the additional bandwidth is much less than the extra cost of a whole transponder.

NTL's System 2000 is a complete multi-channel video compression system operating at broadcast quality using the MPEG standard. At 8 Mbits/second, four digital TV channels can be accommodated in the space normally occupied by one analog service. Lower bits rates are possible, giving even more channels at slightly reduced quality. ("SatNews")

SATELLITE TVRO:

GERMANY--Foreigners in Germany gained a rare advantage over their German neighbours recently when a court ruled they had a right to install satellite dishes to receive television broadcasts in their native languages. A state court in Karlsruhe said freedom of information took precedence over the rights of a landlord who wanted to block an Italian tenant from setting up a dish outside his flat. The court said landlords had to allow foreign tenants to set up a satellite dish if the apartment house does not have cable

television or the local cable company does not provide programming in the tenant's language. But they can refuse permission to German tenants if the building has cable television because they would already have access to many different German-language broadcasters. Cable television in Germany usually offer broadcasts from several neighbouring countries and Turkey but the mix depends on what regional cable companies think best meets local needs. (Reuters)

MALAYSIA--The situation is different in Malaysia. The Cabinet there has decided to continue to ban the use of satellite dishes to receive television programs. The Malaysian government wants to keep out what it views as possible negative cultural effects from foreign broadcasts. Relaxation of the ban also might allow foreign broadcasters to take away audiences from local programs, the "Sunday Star" and "New Sunday Times" newspapersquoted Information Minister Mohamed Rahmat as saying. Only the King and the Prime Minister are exempt from the ban, he said. Mohamed says three additional channels from the government-owned Radio Television Malaysia would be available next year for a monthly fee of about 50 Malaysian ringgit (USD 20). One channel would transmit CNN programs, one the BBC news service and the third would transmit sports programs. There are currently three television channels in Malaysia -- RTM One and RTM Two, owned by the government, and TV3, owned by the ruling party. All radio stations are government-owned. (AP)

ASIAN/PACIFIC MEDIA NEWS:

INDIA--As reported in edition 2184, on its Independence Day on August 15th India launched 5 new television channels on satellite. The event also marked the opening of the new Insat 2-B satellite. The five new channels - entertainment, music, "enrichment", business news and current affairs, and sports - are to compete with the Star-TV package from Hong Kong, which includes the Hindi language Zee TV channel. For the first time, airtime is being given to private producers.

A survey in January indicated that 3.3 million Indian homes were watching Star and Zee TV. Another survey revealed that satellite TV has reached 4 percent of India's half a million villages, where English-language soap operas are the most popular programming.

The Indian government has introduced legislation requiring cable operators to relay at least one of the new channels. But operators are complaining that signals from Insat 2-B are weaker than those from Star-TV on Asiasat-1. (PTI via BBC Monitoring and IPS)

JAPAN--Nihon Keizai Shimbum, Television Tokyo Channel 13 Limited and five sub-affiliates say that they will start broadcasting programs by satellite from 1997 using the BS-4 satellite. BS-4 is set to be launched in 1997. Once operational, the company says that it will plan to relay live broadcasts of economic news from Monday through Friday, and sports events and broadcast movies will be aired at the weekend.

The satellite operator TXN will simulcast HDTV broadcasts alongside conventional broadcasts, and the service will be split between pay-TV

services and advertising supported. A report in the Nikkei Daily Journal said that the monthly viewers fee would be around YEN500 per month. ("SatNews")

ASIA BUSINESS NEWS--Dow Jones has taken a 29.5 percent stake in Asia's first satellite business news channel Asia Business News. Transmissions are set to commence on October 15 initially for 18 hours daily on the Palapa B2P satellite. ABN is now owned jointly by Dow Jones, Television New Zealand Ltd and Telecommunications International, and SIM Ventures (two Singapore government bodies). ("SatNews")

AUSTRALIA--"SatNews" describes the Australian government's plan to sell-off pay television rights as a "farce". Ever since it first announced that four channels could be broadcast by satellite aboard an Optus satellite the whole affair has been dogged by errors, omissions and plain stupidity.

Industry analysts are amazed at the naivety of the Australian government and internationally it has became a laughing stock.

In the latest twist to the bitter tale, the two upstart winners of the licences have failed to come up with money pledged for the licences. Ucom Pty Limited and Hi Vision Limited paid significantly over the odds against over 50 rivals including seasoned veterans such as News Corp. (owner of British Sky Broadcasting) to secure the licences.

The Communications Ministry has now invited the second highest bidders to take over the licences. ("SatNews")

INDONESIA--Arianespace has signed a contract to launch the Indonesian communications satellite Palapa C1. The satellite, to by built by Hughes,will carry 30 C-band transponders and 4 Ku-band transponders. It is tobe launched in October 1995 to replace Palapa B2P, and will have an expected life of 14 years. (AFP via BBC Monitoring)

GLOBAL NETWORKS:

MURDOCH EXPANDS--News Corp., the massive international conglomerate owned by Rupert Murdoch, has jointed forces with Australia's largest telephone company Telestra to form an alliance to exploit the Asian media market. The new venture will pursue interests and investments in activities such as pay television, home shopping and interactive services.

It is not known whether News Corp. will merge its Asian media interests such as the recently acquired stake in Star-TV into the new venture, or whether it will continue to operate it at an arm's length.

Telestra and News Corp. have already taken a stake in Australian terrestrial broadcaster Seven Network Limited, and the Australian Broadcasting Authority is examining the deal for evidence of unfair competition. ("SatNews")

When News Corp, bought Star-TV there was wide speculation if Murdoch would put Sky News on Asiasat, competing with BBC World Service. Last week Murdoch announced he is turning Sky News into a global satellite television news network. Broadcasts to southern Africa are to begin on October 1. In a speech to Sky advertisers in London, Murdoch announced "Plans are well advanced to take Sky News, or a parallel service, to all continents of the world, where we will be seeking local partners, both national and regional." (Reuters)

The expanded Sky News would compete both with BBC World Service and CNNI International. News Corp. also owns the Fox Network in the United States. Presumeably a worldwide news service would also use the news departments of the Fox stations.

Ironically, a few weeks ago, when British Sky Broadcasting announced its Multi-Channel package, it appeared that Sky News would be coded and available only to viewers in Britain and Ireland.

At his London news conference, Rupert Murdoch also said News Corp.has signed a deal to develop a common internatinal digital satellite standard, which would allow TV programs to be beamed around the world on a single system: "We signed an agreement with some of the best brains in the business to develop, co-operatively, what will be the common digital satellite system throughout Europe, Asia, and the Americas." (Reuters)

NORTH AMERICAN MEDIA NEWS:

USA--There have been many changes in American satellite broadcasting during August. On August 1st the new Galaxy 4 satellite became operational. It only took a few minutes to move the traffic off of Galaxy 6 C-band and SBS-6 Ku band onto Galaxy 4 C and Ku band. After that move, SBS-6 moved over to 95 degrees west and it became operational on August 8. It appears that SBS-3 was retired and the COMSAT VIDEO ENTERPRISES services were moved onto SBS-6 from SBS-3. CONUS COMMUNICATIONS is also using SBS-6 -- they have transponders 12, 13, and 14 for their various feeds and Newstar SNG uplinks.

Galaxy 6, meanwhile, moved to 103 degrees west longitude and it started service on August 10 from that orbital slot. So far, the only video observed was the UNIVISION MIAMI occasional feeds channel on transponder 13.

Telstar 301 is getting more and more inclined with each passing day. Syndicators and other users of T1 are finding new homes so their television station affiliates can have the best picture possible. If syndicators had remained on T1, then they would get horrible pictures as the satellite works its way out of the beamwidth. The satellite could also get entirely out of the beamwidth of the television station dish and not be visible at all until the satellite drifted back into the beamwidth.

Some of the T1 services moving include:

Warner Brothers to Galaxy 4/21
Buena Vista Television Network to Telstar 302/6
Compact Video Satellite to Telstar 302/7

Paramount Television (home of "Star Trek") to Telstar 302/3
The VTC Satellite Network to Telstar 302/16.

ABC-TV has moved its east coast feeds and various newsfeeds (especially NewsOne feeds) to Telstar 302. The west coast feed is on Galaxy 3. All feeds were dual illuminating until August 1st,when LEITCH encryption was introduced. (Robert Smathers in "SatNews" and "Satellite TV Week")

DBS--DirecTV has signed up two new television channels for its planned US DBS satellite service. CNN International and Turner Classic Movies will join the other Turner Broadcasting Channels (CNN, Headline News, TNT, Cartoon Network and TBS Superstation) who previously signed up for the service. ("SatNews")

CHINA/USA--North American viewers can now watch hours of Chinese television programs from a new Sino-U.S. joint venture station. The America Asian Satellite Television Network is a joint venture of China Central Television Station, 20 local Chinese television stations, several major Chinese firms and the Chicago Chinese Communications Corp. (3C Group Enterprises), according to the official "China Daily". Twelve hours of programming each day will be uplinked from Chicago, including shows on Chinese culture, news, entertainment, sports, economy, as well as Chinese movies and soap operas. (AP)

New Century Television Chicago's "Daily News from China" service can now be seen for one hour immediately proceeding the North American Chinese Network program on Satcom K2 transponder 14. (Robert Smathers in "SatNews")

FOOD CHANNEL--TVFN, a new cable television food channel set for official launch on Thanksgiving Day in the US, is airing previews of its programming on cable networks. Initially a two-hour daily taster will be aired. Once launched, the service will be a round-the-clock basic cable service, featuring top food chefs, critics and industry previews. From September 27th TVFN will add a four-hour 'appetizer' to its viewing menu showing more programmes planned. Eight hours of daily programming will be cycled in a 24-hour
interval. (Sat News)

POLAND--TV Polonia, which broadcasts to Poles in Europe over Eutelsat, has signed an agreement to relay its programs to North America. The 10 million strong Polish community in the US and Canada will be watching Polish television programs from October 1st. TV Polonia hopes to sign agreements with 300 local cable networks to relay the programming. The next country which Polish television is to reach is Brazil. (TV Polonia via BBC Monitoring)

CABLE TV--The US Federal Communications Commission has brought forward the date of a scheduled fee reduction in cable television services from October 1st to September 1st. Estimates say that subscribers could save up to 10 percent off cable fees as a result of the FCC's new and controversial ruling. There are over 55 million cable TV subscribers in the US, and according to Gene Kimmelman of the Consumer Federation of America, a viewers' lobby group, over USD 100 million will be saved by viewers annually.

A decision was taken by the FCC on April 1st this year to reduce the fees charged to subscribers taking basic cable services. Premium channels will be unaffected by the move, and there is a fear that many cable networks will attempt to rejig and reclassify much of their programming. ("SatNews")

SATELLITE RADIO--Last night I determined for sure that the BBC WS Radio on C-SPAN C3-07 5.4MHz is different from the one on Anik E2-20 at 7.58 MHz. At 9:45-10:00PM Eastern every weekday night you can compare C3-07 and E2-20. You will find "Carribean Report" on C3-07 while on E2-20 you will find the regularly scheduled World Service program.

It looks like C-SPAN takes the feed intended for rebroadcast to the Carribean while the Canadians use another feed. This feed may not be the unmodified full schedule either. (Mike Gingell via Internet News)

LATE NIGHT TV--The big American media news this week is the launching of the "Late Show with David Letterman" on CBS television, in direct competition with Jay Leno and "The Tonight Show" on NBC. Letterman was doing a later night show on NBC, but quit when the network gave "The Tonight Show" to Leno after Johnny Carson retired.

Speaking to National Public Radio after the first broadcast, the media critic for "Rolling Stone" magazine, Jon Katz, commented that the situation today is totally different than when the "Tonight Show" first when on the air. Then, there was no competion. Today, besides "Tonight" and the new CBS program, Chevy Chase will be doing a similar program for the Fox Network, ABC has its "Nightline" news program, and there are dozens of cable and satellite film and specialty channels, as well as the ubiguitous video cassette recorder. The audience is fragmenting.

FUTURE MEDIA--Michael Crichton, author of the books behind the current hit films "Jurrasic Park" and "Rising Sun", goes beyond this in an article in the September issue of "Wired" magazine. Referring to what he calls "The Mediasaurus", Crichton says "the next great American institution to find itself obsolete and outdated, while obstinately refusing to change" could be "The New York Times" and the commercial television networks. Praising CNN and C-SPAN (which broadcasts live from the American Congress and government agencies), he compares the traditional broadcast media to the days when all telephone calls had to be placed through operators.

Crichton criticises the media for oversimplfying the issues, and suggests that once the proposed American fiber optic highway is in place, subscribers will be able to access all the information they want, unfiltered by the press and networks.

One example of how media is changing is a computer program called "Journalist" that can be used with the CompuServe online information service. This program allows the user to lay out a personal "newspaper", with space for news on particular subjects of interest. When running, the program automatically phones up CompuServe on a regular basis, for example every morning, downloads the news of interest, and prints out a customized "newspaper".

WEATHER SATELLITES:

NOAA--Controllers have lost contact with the newest U.S. weather satellite. The satellite, NOAA-13, was last contacted at 2315 UTC August 21st, according to the National Oceanic and Atmospheric Administration. The polar-orbiting satellite was launched by the Air Force on Aug. 9 and had been operating successfully until contact was lost, officials said. The satellite was designed to help monitor the earth's oceans and atmosphere, and joined satellites NOAA-11 and NOAA-12 in polar orbits. Polar orbiting satellites arc in a circle around the planet as it turns beneath them, permitting a view of the entire planet during the course of a day. The two older satellites continue in operation, NOAA officials said. (AP)

USA/EUROPE--American and European weather forecasters have agreed to protect each other's weather forecasting operations when either side loses a major weather satellite. Meanwhile, hopes were fading for contacting a U.S. weather satellite that went dead last weekend. According to Jim Elliott of the National Aeronautics and Space Administration, "We have established a board to investigate what we consider to be a failure". But he says scientists are still sending signals in hopes of getting a response from satellite NOAA-13, which is orbiting the Earth from pole to pole at an altitude of 540 miles. Elliott says the problem with the USD 62 million weather satellite appears to be a short in the electrical system, preventing the solar panels on the satellite from recharging its batteries.

Loss of the weather satellite should not cause any problems in weather forecasting or tracking hurricanes. Two similar satellites, NOAA-11 and NOAA-12, remain in operation.

The United States already has borrowed a European satellite, which is replacing a failed American GOES satellite in monitoring hurricanes, tropical storms and other weather. Normally the United States operates two GOES satellites, in fixed positions over the equator, to observe weather systems every half-hour. Meteosat-3 was borrowed in February when one of the American satellites failed.

The new agreement calls for the United States and the European weather agency to each keep two stationary satellites in operation, and for each to reposition its instruments to help the other in the event of failure. The agencies have cooperated previously. The United States also borrowed Meteosat-3 in 1991, and before that allowed the Europeans to use a GOES satellite when Meteosat-2 failed.

The European agency plans to launch a new Meteosat in November and NOAA has scheduled launches of new GOES satellites next April and in 1995. The geo-stationary satellites orbit the Earth at an altitude of 22,000 miles. They rotate around the Earth at the same rate the planet spins, thus remaining over the same spot all the time. (AP)

MEDIUM AND SHORTWAVE:

AZERBAIJAN--Azerbaijan Radio's Second Program was heard carrying a 15 minute news program in English at 19:00 hrs UTC on 4958 and 15240 kHz. This English-language program is in addition to Azerbaijan Radio's English Service to

Europe, known as Radio Dada Gorgud, which is broadcast 17:00-18:00 hrs on 15240 kHz. (BBC Monitoring)

ESTONIA--One of the few international broadcasters with programming in Swedish has been forced to close down completely. Estonian Radio is discontinuing all programs in foreign languages from Radio Estonia, beginning October 1st. Estonian Radio has been been broadcasting in Finnish, Swedish and English on shortwave and mediumwave for decades.

This comes as a bit of a blow to Finland's University of Tampere, which has been working with the Estonian Radio for about three years. Students from the university's Department of Journalism and Mass Communication have been working at the Finnish language department of Radio Estonia. They have read news, made radio programs and taught Western radio journalism to their Estonian colleagues. Now this exchange comes to its end. (Jorna Manyla, Finland, James Robinson, and BBC Monitoring)

KUWAIT--Kuwaiti Radio has been testing a new 600 kW transmitter on 540 kHz. (BBC Monitoring)

LITHUANIA--Baltic Radio International will be on the air "this summer", says the general manager of the radio station, Mr. Paul Rusling.

This commercial radio station is to broadcast on 684 kHz with a power of 200 kW from a transmitter site in Palanga, Lithuania. The antenna is directed towards Oslo with side lobes targeted towards Helsinki, Stockholm and Copenhagen.

BRI has already started building work at its new transmitter site in Lithuania. In January, the British company signed an agreement with the Palanga local administration. In accordance with this agreement, BRI has secured a plot of land for 15 years. Every year they will pay Palanga USD 20000. General director of BRI, Mr. Paul Rusling, gave an interview in which he said that he was not afraid of rivals, but acknowledged that they exist and could hinder the intention to target advertisements in Scandinavia. BRI will build six radio masts, a transmitter building, generator and premises with a reserve studio, all costing GBP 1,400,000. BRI programs will consist of pop music, with several minutes of advertisements every hour. Mr. Rusling has said that the station opening this summer will feature Elton John and other rock stars. ("Lietuvos Rytas" via FDXA "Euronews")

It seems that this strange radio station really will be on the air despite many doubts. However, Scandinavian DXers have heard nothing on 684 kHz, except Radio Baltika, which is a private radio station in St. Petersburg, Russia.

Personally I am rather suspicious about the future of this radio station. Remember that Radio Luxembourg already closed their English channel. The Scandinavian market for a commercial English language radio station is even smaller than that of Radio Luxembourg in the heart of Europe. Furthermore, listening to an AM/medium-wave station in Scandinavia is more a curiosity because everything goes on FM. Finland, Norway and Denmark already have commercial radio stations (exclusively FM stereo) with their share of

advertising market. Commercial radio will be launched in Sweden within coming months. And, finally, the state-owned radio companies in Scandinavia have rather good and popular rock-channels and Norway will have its own from the beginning of October. Thus, BRI will face a hard market if they really want to have listeners and advertisements. They will have approximately the same problems as Radio Luxembourg had with their English channel on 1440 kHz. But perhaps there are so strong market forces behind BRI that they'll overcome these troubles.

It is really interesting to hear what happens on 684 kHz in the near future - if anything happens. (Jorma Mantyla in FDXA "Euronews")

NICARAGUA--According to a commentary on the right wing station Radio Corporacion, the Nicaraguan government has completely neglected its official station, Radio Nicaragua. Power to the station's two transmitters on 620 and 640 kHz has been cut off. Three telephone lines have been disconnected for non-payment. Overtime has not been paid.

Radio Nicaragua has reported that on August 20th an armed group of approximately 15 individuals stormed Radio Corporaction, and machine-gunned the offices of directors and managers, as well as the reception, recording, and master control rooms. (BBC Monitoring)

RUSSIA--The authorities in Tatarstan have decided to begin broadcasts on shortwave, since only 25 percent of the Tatars live in Tatarstan. (Voice of Russia via BBC Monitoring)

SRI LANKA/USA--A Voice of America radio station being built in a remote corner of Sri Lanka has raised fears among fishermen and pitted the local Roman Catholic church against the world's remaining superpower. The fishermen, who have staged vociferous protests to halt construction of the VOA station, fear it may mean American submarines will patrol off the island's north-western coast one day, denying them their fishing grounds. They also fear losing their land to the Americans, who they think may use the VOA station as a cover for a military communications center.

The United States insists the high-powered shortwave transmitters being built on a 400-acre (161-hectare) coconut estate in Iranawila will improve its public radio broadcasts to Asia, Africa and the Middle East, and nothing more. The new facility on the coast, 80 km (50 miles) northwest of Colombo, should be completed by 1995. It is meant to replace existing VOA transmitters which have been broadcasting for 40 years near the capital, the U.S. embassy has said.

The mainly Catholic fishermen say construction work on the project, which began early this year, has damaged their homes, disrupted their lifestyle and threatened their livelihood. The local church has thrown itself behind them and lobbied the government to scrap the project. (Reuters)

UNOFFICIAL BROADCASTING--The Voice of the People of Kurdistan continues to be heard on 4130 kHz, from fade-in around 15:00 hrs UTC until sign-off att 16:25. The main program of the Voice of the People of Kurdistan is heard on around 4095 kHz at around 16:00-18:00 hrs. On April 29th the station

announced it was broadcasting a "Second Program" at 14:00-16:00 hrs on 7265 kHz, although it has not been heard on this frequency. (BBC Monitoring)

PUBLICATIONS:

Two very interesting newsletters about satellite broadcasting are available over data networks. Both of which are used extensively in compiling "MediaScan", and we'd like to thank both for making themselves available to us.

SATNEWS--SatNews is huge, so big that the fortnightly uploads have to be divided into three files. There's probably more here about the electronics and satellite industries than any one person wants, but all the important news is included. Editor Darren Ingram does a great job, but since he's sold the publication to a commercial company, it caters to business interests, at business prices. Fortunately they offer a special rate to non-commercial subscribers: only GBP 50 or USD 100 for one year to an Internet-compatible mailbox. If you need this kind of information, it's well worth it. You can contact SatNews at the Internet mailbox satnews@cix.compulink.co.uk for more information.

SKY GUIDE--Skyguide is a short weekly newsletter covering satellite and cable broadcasting, concentrating on the UK. Fortunately, it's free. You can find Skyguide every week on London's CIX conferencing system, in the Skyguide conference, the Fidonet Satellite TV echo, and the Packet Radio Network. Skyguide is now available on the internet in the alt.satellite.tv.europe newsgroup. Comments, suggestions, stories and monetary donations are always appreciated. You can contact Skyguide in the following ways:

CIX : mail to bignoise, or use the Skyguide/comments conference.
Fidonet : Netmail to ANTONY PURVIS at 2:251/22, or leave a message in the Satellite TV echo.
Internet: bignoise@cix.compulink.co.uk

Sweden Calling DXers is the world's oldest radio program for shortwave listeners. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948.

Radio Sweden broadcasts in English:

Europe and Africa:

15:00 hrs on 1179 khz (weekdays only)
16:15 hrs on 1179 and 6065 kHz
17:30 hrs on 1179, 6065, and 9645 kHz
20:30 hrs on 1179, 6065 and 9655 kHz
21:30 hrs on 1179 and 6065 khz, and
22:30 hrs on 1179 and 6065 kHz

Middle East and East Africa:

15:00 hrs on 15190 kHz and
17:30 hrs on 15270 kHz

Asia and the Pacific:

12:30 hrs on 15240 and 21500 kHz
22:30 hrs on 11910 kHz and
01:00 hrs on 9695 and 11820 kHz

North America:

15:00 hrs on 15240 and 21500 kHz and
02:00 hrs on 9695 and 11705 kHz

South America:

00:00 hrs on 9695 kHz

The broadcasts at 12:30, 16:15, 17:30, 20:30 (weekends only), 21:30, and 22:30 hrs are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold/TV Asia/Adult Channel) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) (TV4 transponder) at 12.207 GHz, audio subcarrier 7.38 MHz.

Contributions can be sent to DX Editor George Wood by fax to +468-667-6283, from Internet, MCI Mail or CompuServe (to the CompuServe mailbox 70247,3516), through the FidoNet system to 2:201/697 or to SM0IIN at the packet radio BBS SM0ETV.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

> Sorry, it is illegal to OWN or operate any linear for CB. He should send
> the ad to the local FCC field office and let them take care of this bozo.
> The FCC has a record of getting these illegal amps off the market. Just
> cause you don't hear about it don't mean it aint happen'n..

Well, since we're on the subject of the FCC's involvement:
A friend of mine, who's a regular CB'er and a big scanner buff,
had a lot of trouble from a lady who lived three houses away and was
running a 500+ watt CB linear amp. Every time she keyed down she came
across literaly EVERYTHING with an internal speaker. (Car stereo's, home
stereos, TV's, answering machines, etc..) We used to joke about being able
to demodulate her voice from the wavering of the lights in the house. (Which
is actually possible, to tell you the truth).

Anyway, my friend finally had enough of this and called the FCC's office
in Atlanta, Ga. (He lives in Rock Hill, S.C.) He described the problem
very plainly, w/o making any assumptions about her equipment or anything.

The FCC responded by saying:
"Yep, what you have here is a case of someone running a very illegal linear
amp on a C.B."

When asked to do something about it they responded:
"Sorry, we don't have the time or the manpower to investigate illegal C.B.
operations." <END OF CONVERSATION>

My friend got transferred to a different location shortly after that so he
didn't pursue it any longer. I hope that if enough people complained that
the FCC would eventually do SOMETHING about it, but who knows. It was
suggested to me that, upon removing the licensing requirements of CB'ers, the
FCC hoped to keep all the "misfits" on the 27 MHz band, thereby not having
to police the other "more important" bands quite as much.. but as I've seen,
an illegal C.B. station can cause as much trouble as any other. Just thought
I'd share our experience with ya.

I have uploaded to WSMR-SIMTEL20.Army.Mil and OAK.Oakland.Edu:

pd1:<msdos.hamradio>
NOISE.ZIP Calculate noise figure for GaAsFets, etc.

NOISE calculates the noise figure for a linear two-pole. This becomes handy when designing pre-amplifiers and the device is not exactly matched to Gamma optimum, the impedance where the device delivers the best noise performance. The program also calculates constant noise circles which can be drawn on the smithchart. Sources included, uploaded by the author.

I have uploaded to WSMR-SIMTEL20.Army.Mil and OAK.Oakland.Edu:

pd1:<msdos.hamradio>
KFACTOR.ZIP Calculate amplifier stability from PUFF output

PUFF is a computer aided design package for microwave integrated
circuits distrubuted by Caltech. KFACTOR calculates Rolets stability
factor from a PUFF analyses for amplifiers. Stability is a very
important issue when designing amplifiers, however PUFF is lacking
this facility so I made this little post-processor. Sources included,
uploaded by the author.

PUFF can be obtained by sending $10 specifying 5.25 / 3.5 inch diskette to:
Puff Distribution

Ever work out the signal to noise ratio you get from a typical
superhetrodyne receiver, where noise is easily predicted thermal
noise and distortion products? 50 dB is actually quite good.

SSB is a whole lot worse on paper. Remember, seeing IMD products
30 dB down isn't unusual, and this is before your transmit signal
leaves the antenna! Admittedly, I've seen quite a bit better,
but how many people run class A power MOSFETs in their final
amplifier?

Greetings Vacuumland

I've been following with interest the discussions of operators who have successfully achieved proficiency using software Morse trainers. I have viewed several programmes and the one which to me seems to emulate the sound I associate with Morse is MorseTrainer US-1.0.3 for the Mac. It appears to be a very professional piece of software but it is shy of training exercises. Would anybody please suggest sources of training exercises either for this software specifically or some text I could adapt. As with typing and adding machine techniques, there must be some standard Morse practice exercises available for the crass beginner!

Thanks!

1658. Great "mod": HT & Speaker-mike

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-04 16:53:53 UTC
From: andy@clark.net
Message-ID: <26ah71$k6m@clarknet.clark.net>
Source record: 276949

For years I've been using HT's, often with external speaker-mikes.
Problem is, the HT has been awkward to handcarry, because I've never
found a good place to clip the mike. Until now. Finally, I found a way
to secure the mike to the radio, while still making it readily accessible.

Materials needed, from any hardware store:

* Key ring, 1" diameter
* 3" strip of 3/4" wide Velcro (tm), male & female. ;)

Instructions:

1. Remove clip from rear of speaker-mike. I had to drill it out.
2. Attach piece of Velcro to rear of mike, trimming off extra length.

(The mike mod is now complete, so let's move on to the HT itself)

3. Remove the silly little wrist strap, if any.
4. Attach the key ring thru the HT's wrist strap hole.
5. Remove backing from the other piece of 3" Velcro
6. Carefully loop the Velcro thru the key ring; fold over to create
a 1.5" tab, adhesive-to-adhesive, Velcro side out, of course. ;)

Your "mod" is now complete. Notice how when you pick up the HT, the
mike conveniently swings out of the way. Notice how easy it is
to "hang up" the mike when the HT is on your belt--you don't even have
to look. Well, it works for me! -k4adl

"Goodbye, and thanks for the radio," said Tom with a short wave.

1659. Re: CB Linear for sale: How to report?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-04 20:20:54 UTC
From: brian@nothing.ucsd.edu
Message-ID: <26atb6INNlfh@network.ucsd.edu>
Source record: 276992

In 1974 thru 76, an electronics firm I worked for built and sold CB linears - at the time, it wasn't illegal to do so. At the peak of their popularity, they were shipping about THREE THOUSAND units a month. The competitors were doing about as well. At a rough guess, that makes it nearly literally true that "there's a million of them out there."

They were pretty-well-built items. I'd wager most of them are still around somewhere.

And we're arguing about ONE unit? Pthhht.

Me? I was the Data Processing Manager. Didn't touch the things. Just printed the bills for them.

Help !!!

I did the exam today and I can't match up a few answers

Can u pse help??

Q 80. A moving coil meter responds to :-

A. the peak value of the current passing through it.
B. the RMS value of the current passing through it.
C. the average value of the current passing through it.
D. the square of the current passing through it.

(It doesnt say AMMETER but the answers talk about current. Have they forgotten something?

Q71. The reactance of a 0.1mH inductor at a frequency of 3.5MHz is approx :-

A. 2.199 ohms
B. 2 199 ohms
C. 219 900 ohms
D. 2 199 000 ohms

(Notice they used a space instead of a ,)

Q21 An in-line AWR meter operates by sensing:-

A. the characteristic impedance of the line.
B. the transmitter output impedance
C. the line voltage and the line current
D. the square of the line current

1662. Radio Shack HTXs

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-05 00:34:13 UTC
From: leber@panther.warm.INmet.COM
Message-ID: <9309050034.AA14987@panther.warm.inmet.com>
Source record: 276998

Greetings to all on the net, wherever you may be:

I passed the Tech test about a month ago, and like ~90% of the other posters here (or so it seems, at times ;-), I am waiting for that envelope from the FCC.

I am NOT going to ask if I should call them, if (n, where 4<=n<=13) weeks is too long to wait, etc. I took the test in early August, and don't expect to see anything before sometime in late October, at the earliest.

I AM interested in knowing of anyone's experiences pro/con with the Radio Shack HTX HT's. Please, no flames about Radio Shack's attitude (although I find it hard to believe that they are charging $2.95 for the new catalog). Since the HTX-202 is now on sale for $199, I am seriously considering it as my first rig.

Also, is anyone aware of mods for these HTs? I checked the McGill FTP site, and also did an Archie search, but came up blank. I was wondering specifically about extended RX/TX for the HTX-202, as this would come in handy in my work as a volunteer firefighter.

Any information would be appreciated.

Thanks,
Tom Leber
N3??? (4 weeks, and expecting to wait about 8 more)

VK2SG RTTY DX Notes, 3 September
VK2SG RTTY DX Notes for week ending 3 September 1993 (BID RTDX0903)

This week seems to have gone past very fast, with DXpeditions in
various areas keeping everyone happy, or unhappy, as the case may be.
Other trips are scheduled. Stay tuned.

Our information this week came from CE3GDN, ZS5S, 9X5LJ, W2JGR,
WB2CJL, KE6XJ, I5ICY, SM5EIT, DJ3IW and the Central Eu DX-Cluster Node
DB0SPC, and the NJ0M node of the Twin Cities DX Packet Cluster.

>I did the exam today and I can't match up a few answers

>Q 80. A moving coil meter responds to :-
>
> A. the peak value of the current passing through it.
> B. the RMS value of the current passing through it.
> C. the average value of the current passing through it.
> D. the square of the current passing through it.

>(It doesnt say AMMETER but the answers talk about current. Have they forgotten
>something?
A moving coil meter exists of a magnet (fixed) and a coil that can
move, to which the meter is connected. If _current_ flow trough the
coil, magnetism is formed, and the resulting torque moves the meter.
You should read your text book on this! A moving coil meter works
on current per definition; there is a fundamental physical link
between current and magnetism. Therefore, your comment looks
valid, but unneccessary.

Back to the answers. How far the meter goes depends on the force the
magnetism makes, and thus on the current. There are springs in there
that 'push the meter back'. To what exactly reacts the meter?
A. is invalid because there is no peak detection mechanism. Think
of a 1:100 pulseof current; will the meter go out as far as constant
current? It won't, therefore, A is false.
B. The RMS value (Root-Mean-Square) describes what a current would
do in a resistor (amount of heat). Think of an AC current like
a 1mA square wave, 60 Hz; it will generate heat in a resistor
if it's positive or negative at a certain time. However,
During the negative cycles, the force from the coil will be
negative, so a meter won't move at all. Therefore, B is false.
D. is false because the force is linear with the current. The're
trying to pull your leg here; square scales are only used on meters
that use heat to measure current (I forgot about the English term
for those meters, sorry)
C. Imagine a 1:1 square wave of a 1mA current (on-off). The force
from the coil will be half, and the deviation of the meter,
therfore, will be half. The average current, of course,
is half too. Therefore, C is correct.

>Q71. The reactance of a 0.1mH inductor at a frequency of 3.5MHz is approx :-
>
> A. 2.199 ohms
> B. 2 199 ohms

> C. 219 900 ohms
> D. 2 199 000 ohms

>(Notice they used a space instead of a ,)

Xl = 2 x pi x f x L = 2199 ohms. Therefore, B is correct (don't people in NZ use the dot where Europeans use a comma?)
Again, this is in your text book.

>Q21 An in-line AWR meter operates by sensing:-
>
> A. the characteristic impedance of the line.
> B. the transmitter output impedance
> C. the line voltage and the line current
> D. the square of the line current

I could not find AWR meter when I looked it up, I cannot help here
Can someone describe what it is?

John, even if you passed, I think it wouldn't hurt if you check in the textbooks once a while. That's not a shame; I find that, after I passed 11 years ago, I incidentally have to look things up while experimenting. Things like the impedance of an inductor, however, should be trivial for you. Don't give up!

This has come up on several occasions in the past regarding Radio Shack...they've said over and over that they will not sell a product to someone who indicates that they will be using it in an illegal manner. This has in the past included telephone recording adapters, Class A-verified computers (which aren't legal for use in a residential area), radar detectors (if the customer gives an address in a state that bans them) and of course transceivers other than the Part 15 variety.

1669. Interesting amateur subject report on CNN

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-05 09:20:01 UTC
From: easu348@orion.oac.uci.edu
Message-ID: <easu348.747220540@orion.oac.uci.edu>
Source record: 277003

I was just watching CNN's Headline News, and they did a report on ham radio operators volunteering to help out in a large arson investigation near Berkley. They did not talk too much about the workings of the investigation, but they did mention that 40 something volunteers were helping. One of the people that they showed was WB6HPA, Fred Leif. I just thought it was interesting.

1670. Addition to FAQ articles: phonetic alphabet

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-05 10:17:56 UTC
From: ikluft@uts.amdahl.com
Message-ID: <f4D703tvd9WO00@amdahl.uts.amdahl.com>
Source record: 276974

The question about the phonetic alphabet has come up a zillion times by
now. Probably there is little doubt that it qualifies as a frequently-asked
question. The following text has been added to Part 3 of the
rec.radio.amateur.misc FAQ near the beginning, just after the text about
Morse Code.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good
operating procedures include using the standard phonetic alphabet
to help communicate more clearly. The recommended phonetics are
those also in use by aviation (internationally by ICAO treaty) and
some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo
lima mike november oscar papa quebec romeo sierra tango uniform
victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular
pronunciation. Also, nine was changed to "niner" to avoid confusion
with the German word "nein" for "no", though that change is not
commonly used by Hams. (Usually you'll only hear "niner" from Hams
who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to
say callsigns in phonetics to give the other side a better chance
of understanding them correctly.

The rec.radio.amateur.misc FAQ is posted on the 7th of every month in the
early morning, US Pacific Time. A shorter how-to-find-the-FAQ pointer article
is posted every 14th, 21st, and 28th of the month in an effort to communicate
the FAQ while conserving network bandwidth.

Please help continue the success of the FAQ by pointing new users to it,
before or after they ask frequently-asked questions.

> as a volunteer firefighter.

No, there are none. The HTX-202 is specifically designed to _not_ have
extended receive. This keeps it from suffering from cross-modulation the
way that most HT's with extended receive do.

If you do come across what appears to be a extended-receive mod for the
HTX-202, don't try it - it's a well-known hoax.

>
>Don't understand what you're describing here. What CW mode uses up
>50khz ? CW doesn't use any 'encoding' schemes. You turn the transmitter
>on, you turn the transmitter off. It emits a single wave on a single
>frequency. Very little bandwidth - certainly not 'anywhere' near 50khz.
>Geezzz SSB's only 2.5khz of bandwidth, or so.

In the slim hope that John isn't just generating flame bait, I'm
sticking my oar in. What Daniel is saying is that *collectively*
ops using manual Morse encoding are occupying 60 kHz of 20 meters
while all the various other digital modes are *collectively* working
in 30 kHz of spectrum. That was a reasonable distribution up until
about 2 years ago because the manual Morse encoding ops dominated
the band segment. But that's changing with the rapid rise in operations
on other digital modes, and a new accommodation needs to be made.
Currently, packet ops are creeping above 14.1 MHz and into the
foreign phone segment, and AMTOR ops are creeping down from 14.08 MHz
into the Morse encoding section, pinching the General and Advanced
Morse ops against the Extra segment at 14.025 MHz. The RTTY guys are
caught in the middle with nowhere to go on the band. A new bandplan
is needed, but the underpopulated Extra segment is set in place by
the rules, data transmission is barred above 14.150 MHz by FCC
regulation, and the foreign phone ops don't want to share their
refuge from US phone DXers. It looks to me that, barring regulatory
change, things are only going to get worse for the digital ops
on 20 meters. The best course is probably to select another band,
such as 30 meters, as propagation permits.

John is correct that A0 emission uses no encoding technique. But
if we allow Daniel the use of a common colloquialism, then CW and
manual Morse encoding can be considered synonymous. Morse definitely
is an encoding, like ASCII or Baudot, of alphanumeric characters.
It's just a variable length encoding that typically uses the A1 emission
type instead of F1 to represent the marks and spaces. This lack of
regularity and redundancy makes it theoretically less robust on a
noisy or fading channel, though in practice it can often do quite
well with the aid of intensely conditioned wetware modems.

1673. Antenna Covenants AGAIN (but now with a twist!)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-05 16:54:38 UTC
From: cole@concert.net
Message-ID: <26d5ke$kg3@inxs.concert.net>
Source record: 277009

Greetings!

The article below is part of a thread I started in rec.video.cable-tv. I didn't cross-post it, as I wanted to avoid unnecessary traffic. I wanted to post it to rec.radio.amateur.misc because it raises concerns and issues brought on by recent legislation that could affect amateur radio operators.

This particular article is my reply to a reply to my original article. Since I didn't ask for/get consent to include the primary reply'ers text, I've removed it. ALL TEXT BELOW IS MINE. Please refer to the rec.video.cable-tv newsgroup for more information/articles.

73 de KC4WEJ,
Derrick

--- included article ---

I originally said:
>>That's all fine and dandy, but what if you live in a subdivision that has
>>covenants restricting antennas/dishes? What then?

[reply deleted]

Being an amateur radio operator, I've listened to some arguments about covenants, voluntary agreements, local ordinances, etc. There is a federal something-or-other that supposedly prohibits local municipalities from ordinances that restrict antennas. This is apparently against the law(s) set forth by the Communications Act of 1934. The arguments are brewing as to whether or not "voluntary agreements" such as covenants (that are of course "agreed to" when the deed is signed) are also affected.

I originally said:
>>I'm not a lawyer, and I'm not completely versed in the ways of the television
>>industry, but it would seem that given the evolving situation, covenants that
>>restrict antennas would now be deemed moot (if not illegal) as now cable,
>>although aesthetically pleasing, is now NOT the only medium by which to
>>receive all FCC-licensed stations in your local broadcast area.

[reply deleted]

Before all this mess started, television stations were brought to the television by means of a buried coaxial cable. Since local programming also "rode the coax", Joe Developer obviated the ability to put up an antenna by introducing covenants restricting if not prohibiting antennas, most likely thinking "since cable carries it all, Joe Homeowner won't need an antenna. PLUS, they're unsightly and lower property values."

Ok, fine.

Now, local programming is in danger of NOT "riding the coax", and will have to be pulled "off-air", which requires an antenna. Well, thanks to Joe Developer, Joe Homeowner is now restricted if not prohibitied from viewing local FCC-licensed BROADCAST programming.

(Put on armchair lawyer cap)

Restricting if not prohibiting Joe Homeowner from viewing local FCC-licensed broadcast programming is in direct violation of the Communications Act of 1934. Ergo, "restrictive antenna covenants" are in direct violation of the Communications Act of 1934 i.e., illegal.

Please prove/disprove me otherwise!

[reply deleted]

To be honest, if my cable bill goes up $1 (as would be the case if Cablevision knuckles under to WRAL), I could care less. But I also freely admit to having ulterior motives regarding the hopeful abolishing of these idiotic, anal-retentive antenna covenants. I would like the freedom to put up a satellite dish (you can't possibly imagine what's up there!) and to put up an amateur radio antenna on MY property. Granted, in my particular situation the antenna covenant is not prohibitive, but unless someone contributes a little something to MY mortgage payment, I shouldn't have to ask that someone for permission.

I acknowledge those who would reply that "Well, YOU chose to live there, YOU signed the deed, YOU agreed to the stipulations". I really can't rebuke that. My point is that now one of those stipulations is in my eyes illegal.

Comments welcome!

Derrick

Fred is working with a group. The Northern Alameda County or NALCO ARES and Races Program, with memoramdoms of understanding signed with the city of Berkeley, the city of Albany and the university of california at Berkeley.

What you are seeing in the media is a new program of amateur involvement in serving local or city fire departments similar to the state run cdf vip program.

Berkeley is the first city to fund and use amateurs in a *strictly* fire watch program that I am aware of. Berkeleys eastern city limits are the urban to grassland interface that is prone arson and careless use of flammables.

Like the Chief, I wish that people didn't have to do this...But the hams have given peace of mind to many of us living in these hills.

To all radio amateurs

SB DX ARL ARLD046
ARLD046 DX news

Thanks to Paul, KB1BE; the Connecticut DX Association Net; the YCCC
PacketCluster Network; Bob, W5KNE; QRZ DX; and John, KB1T, for the
items in this week's bulletin.

WAKE ISLAND. After a 24 hour delay, the Cal/Poly Group was spotted
Thursday on 14214 kHz at 1309z. Keep an eye on your local
PacketCluster for WH9/KC6CEX.

CAMBODIA. Mike, VS6WV, has been worked as XU6WV on 18080 kHz CW and
14194 kHz SSB between 1130 to 1400z. A PacketCluster spot shows
XV7TH on SSB on 14195 kHz around 1400z.

MONGOLIA. JT1CS and KB9IBZ are signing JT3SDX. They have been
worked between 14025 and 14030 kHz around 1300z. QSL via JR0CGJ.
JT1BR has been worked grayline-mode on 7011 kHz CW around 1138z.

CHAGOS ARCHIPELAGO. VQ9QM has been on 17 meters lately. Check
18069 kHz around 1530z.

QATAR. A71A was worked on 21201 kHz at 1530z.

SOMALIA. Rob, N3HQW, will begin a six month stay starting in early
September, and has made arrangements to operate as T5/N3HQW. He
will be on 20, 15 and 10 meter SSB. QSL via WD4NGB.

GHANA. Randy, K0EU, continues to keep 9G1XA very active, though now
most spots show up for 160, 80 and 40 meters. Check 1827 kHz around
0545z and between 2300 and 2400z; 3505 kHz between 0145 and 0200z,
and 0500 to 0600z; 7023 kHz from 2330 to 0100z; 18072 between 2100
and 2200z; and 24893 kHz between 2200 and 2230z. QSL via K0EU.
```

CAYMAN ISLANDS. K6URI will be operating as ZF2VA September 5 through 17.

EAST KIRIBATI, aka LINE ISLANDS. Listen for the T32BE and T32BI operation expected on from September 8 through 13.

SAINT PAUL ISLAND. The CY9R operation is now active from the northern-most island. They were spotted on 7009.5 kHz at 2148z. QSL VIA VE3MRN.

MALAWI. 7Q7CE will be active until September 10. 7Q7XX has been worked on 18079 kHz between 1900 and 2300z.

WALVIS BAY AND PENGUIN ISLANDS. If you haven't worked either of these, it would be a good idea to work them ASAP if they become active. The DXCC status of both Walvis and Penguin could come into question, should South Africa turn them over to Namibia.

THIS WEEKEND ON THE RADIO. The All Asia Phone Contest, sponsored by the Japan Radio Relay League, starts at 0000z Saturday and runs for 48 hours. The exchange is signal report and two digit number denoting your age. For more information see page 117 in June QST.

The LZ DX CW Contest, sponsored by the Bulgarian Federation of Radio Amateurs, is a 24 hour event which starts at 1200z on Saturday. Check page 103 of August QST for details.

And according to the 1993 KB1T Ham Photo Calendar there are two other events worth noting. The DL QRP 40 Meter CW runs from 1300 to 1600z on Saturday. The 24 hour RSGB Field Day Phone event starts at 1500z Saturday.

SB SAT @ AMSAT $ANS-248.01
CHILEAN MICROSAT STATUS

HR AMSAT NEWS SERVICE BULLETIN 248.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 4, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-248.01

More Information About The Chilean MICROSAT

ANS has received additional clarifying information on CESAR-1 which was the subject of an ANS bulletin released 14-AUG-1993. CESAR-1 is a 100% amateur radio satellite project being constructed by AMSAT-CE. Contrary to other reports, the Chilean Air Force has no participation in it. The MICROSAT type satellite is being built under an agreement between AMSAT-NA and AMSAT-CE under which AMSAT-NA is providing AMSAT-CE with basic information regarding the MICROSAT design, and rendering any possilble assistance when needed. AMSAT-CE estimates the total cost of completing its first satellite project at around $1M US DOLLARS! This amount includes more than merely the cost of building CESAR-1 but represents the total outlay needed to establish the necessary infrastructure to accomplish the task. To appreciate this, one must consider that the newly established Chilean AMSAT group exists in an environment much different than in most countries in which satellites have been built. There are no aerospace companies with employees who are radio amateurs. Therefore AMSAT-CE must set up its own laboratory and machine shop and train people to man them; and parts must procured. All of this requires the mounting of a fund raising campaign to publicize the project within Chile, including travel within the country to raise the interest of hams and the general public. Understandably, alot of Chileans are somewhat skeptical of the concept of a Chilean radio amateur satellite. The money raised, so far, is mainly based on personal contrib-utions by members of AMSAT-CE. The organization has only one paid em-ployee, a part time secretary. Everyone else in the team are volunteers, all of them licensed hams. With this information in mind, AMSAT-CE can be considered to be in the best tradition of other AMSAT-OSCAR projects in various countries. Once more, they are trying to accomplish a difficult task in the environment of a country that is making efforts to shed the image of a "underdeveloped" nation.

CESAR-1 will be a typical MICROSAT to which the builders expect to add a GPS receiver and digital voice transponder experiments. The latter will receive an L-Band uplink and transmit an S-Band downlink. Among other applications, this experiment will allow terrestrial repeaters to be linked via the satellite. The present plan calls for completion of a flight unit by January '96

[The AMSAT News Service (ANS) would like to thank Eduardo Diaz (CE3GA) for this bulletin item.]

ITAMSAT TELEMETRY COEFFICIENTS

HR AMSAT NEWS SERVICE BULLETIN 248.02 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 4, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-248.02

ITAMSAT Telemetry Coefficient

Following is a coefficient file for the telemetry channels of ITAMSAT. Alberto (I2KBD) reports the launch is presently scheduled for 25-SEP-1993 at 01:27 UTC. ITAMSAT will start out with a callsign of ITAMSAT, and change to IY2SAT when BBS operations are initiated. Writers of telemetry decoders will want to note that this file may not be precisely in the "standard" MICROSAT format and their programs will need to recognize both callsigns.

This file has been uploaded to CI$, hamnet, library 5.

WD0E will attempt to have an updated TLMDCII out prior to this launch, that will recognize this bird, but that may not be possible given other commitments.

Martha, at AMSAT HQ, will have this file available both as hard copy and on disk in about a week or so. Telemetry aficionados will note some interesting items here:

- ch 15h is labeled RX frame temp. This is the same as on the current MICROSATs: the temp of the frame, in the receiver module, on the inside wall on the +X side.

There are temperature sensors on all four side solar panels and the -Z, not just the +Y. This is primarily to improve the source-side power management efficiency.

- Channels 2C through 2E will require clarification, but they may be simply different labels for the same channel numbers is the present MICROSATs, as the BCR is essentially identical.

- Note the -Z array temp at ch 35h

- Channels 3E through 41 will require clarification

- WD0E understand the IR sensor will have a narrower field of view than the present MICROSATs. Observing its varations when the +Z surface is earth pointing may be interesting.

AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 248.03 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 4, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-248.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz

Date UTC Mode Phs NCS Alt NCS

11-Sep-93 1430 B 159 VE2LVC W9ODI
18-Sep-93 1515 B 96 N7NQM W5IU
2-Oct-93 1400 B 160 WA5ZIB WJ9F

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 248.04 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 4, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-248.04

Weekly OSCAR Status Reports: 04-SEP-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Aug 16-Oct 25
Mode-B : MA 0 to MA 60 !
Mode-BS : MA 60 to MA 120 !<- after Aug 30 (hopefully)
Mode-S : MA 120 to MA 145 !<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 !<- S beacon only
Mode-BS : MA 150 to MA 180 ! Alon/Alat 180/0
Mode-B : MA 180 to MA 256 !
Omnis : MA 230 to MA 40 ! Move to attitude 210/0, 25-Oct-93
Continuous up-to-date information about AO-13 operations is always available on the beacons at 145.812 MHz and 2400.646 MHz in CW, RTTY and 400 bps PSK. Also, these bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, etc., and can also be found in many international newsletters. [G3RUH/DB2OS/VK5AGR]

AO-13 DX: LU8EBH says that he will be Asuncion, Paraguay from 11-SEP-93 until 15-SEP-93 operating AO-13 AMSAT-OSCAR-13 Mode-B using the call sign ZP0SAT or LU8EBH/ZP. Look for him on a downlink frecuency of 145.890 or 145.900 MHz. In early September he'll confirm the dates and callsign. On 30-AUG-93 at 13:58 UTC there took place the first QSO between Japan and countries in Zone 13 using AO-13 satellite. JG1TSG moved to Nosap Cape NE Japan for this purpose. Also active was JA8BY. Theye used the Mode-B. JG1TSG used 50 watts output, and his antennas consisted of a 12 element boom for 145 MHz and 26 elements for 435 MHz. LU8EBH used home brew rig with 25 watts output. His antennas were the KLM 40CX and 22C. Some minutes later, with about one or two degrees of elevation, the signals increased to S5-2. [LW2DTZ & LU8EBH]

AO-10: VE2LEZ reports that last weekend he was listening to AO-10 when he came upon an excellent DX station: 4MZMW0. And it turns out that this was VE2LEZ first contact on AO-13! He says that he made a contact with 4MZMW0 on a downlink frequency of 144.915 MHz. VE2LEZ says that the contact was difficult but challenging. [VE2LEZ @ VE2FKB]

AO-16: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

KO-23: Operating normally. [WH6I]

AO-21: RUDAK-2 is now operating continously in the digital FM Mode only, no telemetry and no DigiVoice for the moment. So nothing is wrong with RUDAK. However, telemetry and DigiVoice will resume later this month and for October, a special DigiVoice Experiment will be held. [DB2OS]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

1687. Re: IC229H low audio problem

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-06 02:40:52 UTC
From: bat@gdstech.GRUMMAN.COM
Message-ID: <BAT.93Sep5214052@gdstech.GRUMMAN.COM>
Source record: 277026
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

When I first got my 229H a few years back, I got reports of low
audio. So, I called that great Icom center in ATlanta, and asked the
nice man where the deviation pot was, so I could turn up the gain.
He explained that it was an unncessary step, as many 229s had left the
factory with that proble, and the solution was easy. They had put a
too-low value zener diode accross the electret microphone element, and
it needed to be changed (It was a 5 volt, should have been a 9 volt,
I think). He offered to change it if I sent the radio in, or allowed
that I could change it myself. I agreed to try it. He told me what
screws to remove, I did, there was the diode. I unsoldered it, and
replaced it with a radio shack zener. A 10 minute job, and my audio
now gets good reports. Call Icom, and ask their help.

>>>My question is: If I walk into Radio Shack, put money down, and say:
>>> "Gimme dat HT-202, and I'll give you this money", can
>>> (would) they ask to see a license before selling it to me?

>>>On the bottom of page 28 of their 93 catalog, it states:
>>>YOU MUST HAVE A CURRENT FCC AMATEUR LICENSE OF APPROPRIATE CLASS
>>>TO TRANSMIT WITH THE HTX-100 and HTX-202.

>>>I would think re-iteration of the above would be all RS should do, since
>>>the ultimate responsibility is mine to abide by the rules.

>>> Comments? Experiences?

Radio shack would sell you 20 of the ht's. They are required to make
the statement about licensing and will even help you find a vec, but
they do not check to see if you are licenced before you pick up the
radio.

Btw- it is a great radio. I use it for my packer mailbox.

Hi,

This winther I have received very nice and very useful weather-fax from the
Rota station (Spain). But since several weeks I can't get any signal.
I would like some informations about this station. Have they changed frequancies
or stopped to transmit ?

Thanks in advance,
Patrick

I bought this gun, why can't I fire it out the back door anymore?
Just because they built a subdivision back there is no reason for
me to stop shooting into where the woods used to be. :-) Spectrum
usage changes, that's a fact of life.

While I think the ECPA is a sham bone thrown to the cellular
companies, so they could con their customers into believing there's
real security on cellular instead of having to spend some money
for scrambling equipment that would have offered some real security,
it is the law.

I guess there are a lot of aural voyeurs around given the complaining
about the ECPA that we see. I've never found eavesdropping on random
strangers' conversations that entertaining. But if you do, you can
still go sit in a resturant or bar and listen to your heart's content.

Albert Einstein explained the telegraph this way, "Think of a long
cat, pull his tail here, and his head meows way over there." He
then went on to explain radio as, "just like the telegraph, but
without the cat." Our favorite cat, Morris, has sadly gone to
cat food commercial heaven, but his memory lives on among amateurs
who loved to pull his tail.

1694. Program, convert from S params -> Spice model

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-06 14:08:37 UTC
From: rick@cs.sunysb.edu
Message-ID: <26fg95$1tk@newsserv.cs.sunysb.edu>
Source record: 277022
Cross-posted to: rec.radio.amateur.homebrew,sci.electronics,rec.radio.amateur.misc

Does anyone happen to have a pointer to a PD program that will take
a set of S parameters and crunch them backwards into a Spice
compatible model? Ideally, I would like to get something that
will produce models for both BJTs and the various types of FETs.
I have read that Compact Software's SuperCompact can produce
such models, but for casual tinkering, I am sure the price is
way of of my league :-)

Alternatively, I would appreciate any pointers to literature that
would describe the search algorithms for constructing such models
from S params.

Thanks - Rick Spanbauer, SUNY/Stony Brook

Do automobile dealers ask to see your driving license before they will
sell you a car? Do gun dealers ask to see your firearms license?

Surely the point is, that the *ownership* of an article does not necessarily
imply an intent-to-use. A non-ham could perfectly legally buy a ham radio
as a gift for a licensed ham.

Here in the UK, there *have* been cases of hams who have suffered legal
inconvenience from having a HF transceiver (used to drive a transverter)
when their ham license has been for VHF only; the argument has been that
they have an unlicensed transmitter. I believe the Judge has usually been
lenient in such cases.

1697. Mods for new Yaesu ft-2200 yet?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-06 16:08:00 UTC
From: tskloss@zeus.tamu.edu
Message-ID: <6SEP199311081038@zeus.tamu.edu>
Source record: 276883

I just ordered the 2200 and wonder if anyone has Tx and Rx mods for it. Do all Yaesu radios follow similar jumper assignments within a given group of models? If I poke around inside myself (could random jumper moving hurt it?) how should I go about it. I have the mods for the 2400, and assume the 2200 will probably be different, but maybe...

Any chance of getting Tx on the AM receive band that comes stock?

Better yet, should I wait a year for the manf. warranty to expire first and 'burn it in' with use to see if I got a lemon.

Thanks, -tim

1698. Yagi for Cellular Phone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-06 16:29:39 UTC
From: wier@merlin.etsu.edu
Message-ID: <wier-060993102939@192.43.199.220>
Source record: 276901

I've just joined the cellular phone ranks ... Dallas
is a very hot cellular market and there are pretty attractive
deals (not that I'm dissatisified with 2 meters :-).

One thing I'd like to be able to do is to take it to
a place I own in S.W. Colorado way back in the mountains.
It would be nice to be able to use the phone up at our cabin,
especially when non - hams visit and I'm not around.
I did some checking and found that the company which owns
the cellular license there has no intention of building a
cell in the forseeable future (that p*sses me off! Sounds
like something that should be challenged legally - use it or
lose it). The nearest operating cell is currently 80 miles
away which will *occasionally* produce a "lock" on a phone my
partner brought up this last summer. But since his was a .6
watt hand held, it couldn't "break" the cell. I have a 3 watt
unit, so am wondering if anyone knows of/has tried using a yagi
for cellular coverage. Of course you wouldn't want to do
this in a metro area - it might well goof up hand offs between
adjacent cells. However, *apparently* there isn't any law against
it, since I see Radio Shack advertising antennas which have "5 db gain".

I wonder if you might be able to get Down East Microwave to custom
cut you a yagi for 850 Mhz?

Any suggestions appreciated!

You're a bit out of date. About six or seven years ago congress passed an immensly bogus piece of legislation called the Electronic Communications Privacy Act. A large amount of impetus for this came from the cellular industry. People were finally beginning to realize that the hype that the cellular industry was putting out about the security of the phones was just that, hype. It was pitifully easy to listen in on cellular calls. Even after the law was passed we had a major scandal in Virginia about some interception of the now goverernor's cellular calls that was made available to his opponent in the last election.

In general terms the EPCA is vague and sweeping. It pretty much states that "It is illegal to listen to anything not intended for you to listen to." However, it has specific language for cellular (1 year), IMTS (6 month), and cordless (none) phones. Of course, this bill has done absolutely nothing to increase cellular phone security. All it has done is add an erroneous expectation of privacy to cellular transmissions. At least one consumer group and even some cellular industry people have proposed requiring that the phones bear a disclaimer about their security (One cellular industry publication points out that with thinking like the EPCA, it's only a matter of time until they are required to design antennas so that they do not broadcast any sensitive information).

My favorite slogan is on the side of the trucks belonging to Brandywine Communications (this east coast hams may note is the commercial radio side of Deleware Amateur Supply). They say:

The privacy of a phone with the convenience of a radio

or is it
The privacy of a radio with the convenience of a phone.

I can never remember :-)

-Ron

So to push this analogy a little further, your keyboard is now the tail
of a cat and my terminal is its head; or your mic (attached to your
transceiver) is now the tail and my receiver is its head... Quite a
cat we've grown here. But we're all still pulling its tail (listen to
2 meters - sounds like cat howls to me...)

Well, nice words from corporate headquarters not withstanding. I've attempted to leave information about exams and the local radio clubs at various RS stores in the area and I've gotten the "against company policy" bullshit from managers at several of the stores.

How about a nice letter from corporate encouraging the stores to cooperate with local amateur organizations. The only store that doesn't give me grief is the one in the area where the manager got his ham license just days after the HTX202 was announced.

The Foundation for Amateur Radio in the Washington Baltimore area provides many scholarship programs. They are funded by the member clubs (and the some Foudation fundraisers like the hamfest). Since most of the money is donated by local clubs, they tend to bear stipulations to go to local students, but I'm not sure they all are that way.

Anyway, I encourage any hams in the area to look into the FAR scholarships.

Principally, this is not possible, since SPICE-models for MOS och BJT
are large-signal models and the s-parameters describe the small-signal
behaviour in a working point. Of course, it is possible to extract a
small-signal only model for SPICE, but what's the point?

The other way is OK and actually no special programs are needed for this. The
methods are described in books.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS NEWS BULLETIN 774 29/8/93

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

Detailed broadcast frequencies are given from time to time,
however look on 7.043 Sundays 0030z, 3.043+/- Sundays 0930z and
146.675 neg offset anytime for the Sydney service area.

SIGNALLING, ALIVE AND WELL IN SCOUTS!

AT A TIME WHEN AMATEURS WORLDWIDE ARE CLAMOURING TO HAVE MORSE
CODE DROPPED FROM LICENSE REQUIREMENTS, SCOUTS FROM NEW
SOUTH WALES HAVE RE-INTRODUCED SIGNALLING AS A REQUIRED
SKILL FOR THEIR 1993 SCOUT RALLY.(A STATE WIDE SCOUTING
SKILLS COMPETITION.)

THE SIGNALS BASE REQUIRES MESSAGES TO BE SENT AND RECEIVED
USING TELEGRAPHY OR SEMAPHORE. THE MORSE WILL BE BY KEY AND
BUZZER, MORSE FLAGS, OR LIGHT. THE SEMAPHORE WILL USE THE
TRADITIONAL FLAGS. MESSAGES WILL REQUIRED TO BE SENT USING
ALL START AND END SIGNALS, ERROR CORRECTION, PUNCTUATION,
NUMERALS ETC.

INTERESTING THAT IN THIS HIGH TECH. AGE THAT SUCH BASIC
SIGNALLING SKILLS ARE BACK IN VOGUE! WHERE ARE YOU, ALL
YOU EX-SERVICE SIGNALLERS? THERE COULD BE AN OPENING HERE FOR
YOUR SKILLS!

Col VK2CS

ANARTS welcomes JOTA information -- remember we cover
Australia, make use of the broadcast to let people know where
your stations will be operating and with what modes. We are
pleased to help in any way we can.

NEWS FROM WESTERN AUSTRALIA

ALL RADIO AMATEURS SEND CONGRATULATIONS TO GEORGE MOSS VK6GM
WHO REACHES THE AGE OF 90 YEARS ON THE 2ND OF SEPTEMBER 1993.

GEORGE WAS BORN IN THE SPARK COMMUNICATIONS ERA , AND WAS FIRST LICENCED IN AMATEUR RADIO IN 1926 IN THE PAST 67 YEARS IN AMATEUR RADIO. GEORGE HAS SEEN THE GAMUT OF COMMUNICATION TECHNIQUES FROM SPARK THROUGH TO VALVE EQUIPMENT , AND TODAYS FULLY SOLID STATE GEAR.

GEORGE HAS KEPT HIMSELF ABREAST OF MODERN TECHNIQUES, AND OVER THE PAST SEVERAL YEARS OPERATED R.T.T.Y. AND SLOW SCAN T.V. HE HAS RECENTLY UPGRADED HIS COMPUTER TO AN I.B.M. 386 CLONE AND IS PLANNING TO OPERATE COLOUR SLOW SCAN TELEVISION IN THE NEAR FUTURE - NOT A BAD EFFORT FOR A NINETY YEAR OLD RADIO AMATEUR!

LAST TUESDAY AT THE CITY VENUE OF THE RADIO AMATEUR OLD TIMERS MEETING , ALL MEMBERS ATTENDING WERE PLEASED TO CELEBRATE GEORGES FORTH COMING BIRTHDAY, AND ALL WISH HIM MANY HAPPY RETURNS OF THE 2ND OF SEPTEMBER.

SUBMITTED BY RAY VK6PW

ANARTS WOULD LIKE TO ADD ITS CONGRATULATIONS TO THOSE GEORGE HAS ALREADY HAS RECEIVED. IT IS GOOD TO SEE YOUR INTEREST IN OUR HOBBY IS AS STRONG AS EVER. LUCK WITH YOUR COLOUR SLOW SCAN TV. 73S

Summary of activity

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) was quiet all week.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values, except for a brief depressed period of up to 25 per cent on 20th, and brief enhanced periods of up to 30 per cent on 24th-26th August. Spread F was observed from 1500-1800 UT on 24th, and 1900-2100 UT on 26th.

Forecast for the next week (27 - 2 September)

Solar : Very low.

Geomagnetic: Quiet with possible active periods on 29th.
Unsettled to active levels expected 31 August to
2 September, with possibility of an isolated
minor storm period occurring during this time.

Ionospheric: Mostly near predicted monthly values. There may be depressions to 20 per cent during geomagnetic storming. Spread F may degrade nighttime communications during the week.

Below is an extract from the RTTY Digital Journal July/August 1993. We thought you would be interested in their comments on the VK2SG RTTY DXNotes, as the anniversary of the first 'cast falls next week. Read on ...

Quote

Weekly RTTY DX bulletins

From time to time you have been referred to the - VK2SG RTTY DX Notes -. These bulletins, which originate on HF AMTOR, are a good source of timely RTTY DX information. They were originated many years ago by Syd Molen (sic), VK2SG (DX1), and given enhanced distribution by the late John Troost, TG9VT. While DX1 now sits on the sidelines and rests with his well earned laurels, submitting DX tidbits for the Notes from time to time, the tradition is being carried on for him by a rotating trio of editors, consisting of Luciano, I5FLN, Bob, WB2CJL, and your DX Editor, (Jules) W2JGR.

The Notes are the only weekly on-the-air bulletins devoted exclusively to disseminating news of interest to RTTY DXers. They are issued early on Friday morning UTC, and by Friday afternoon have generally been distributed around the world via the APLink network. APLink mailbox stations that regularly carry them are CE3GDN (see frequencies at end of item), I5FLN, VK2AGE, ZS5S, 9X5LJ, W5KSI and others...

By making a habit of reading these weekly bulletins you can keep current on time critical DX happenings, as well as determining operating profiles of many of the rare and semi-rare ones. Of course, there is also the occasional unique tidbit to be found.

Readers of the VK2SG RTTY DX Notes are invited to contribute their DXinformation via APLink. An appreciative credit is always given even if a submission cannot be used. Each edition tells you where to send your DX news for the coming week. If unable to reach the intended recipient directly, allow time for relaying delays. deadline for receipt of your information by the - editor-of-the-week - is approximately 2100Z every Thursday.

CE3GDN scans 7037, 7070, 14066, 14068, 14072, 14074, 14078, 21070, 21072, 21074, 21076, 21078, 24915, 28074, and 28135

KHz.

Unquote

Referring to the Notes being available Friday afternoon UTC, alas this is rarely the case here in Sydney, with the result that ANARTS took the opportunity of the Gosford Field Day broadcast being on Saturday to drop the Notes back one week. It was very difficult, sometimes impossible, to obtain the Notes in time to include them in the weekly broadcast.

We took the view that coming DXpeditions were usually notified well in advance, and also, that the prime purpose of the Notes was to build up profiles of active RTTY DXers, rare or otherwise, as mentioned by Jules.

We had been spoiled for many years by having the DXNotes so readily available, and now we find ourselves on the end of the long relay path/s.

Next week, just past to the 17th anniversary of this broadcast (commenced 3rd September 1976), we will give you the history from the beginning, direct from the teleprinter of DX1 himself.

So be watching this space and see how it all started.

ANARTS NEWS BULLETIN 775 05/9/93

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

In celebration of the 17th anniversary of this broadcast, and
the influence it has had under Syd VK2SG/DX1 in the world of
RTTY DX, this cast is entirely on DX and related topics.

Aland Is. on air

Club station OH2EW will operate as OH2EW/OH0 in the Aland
Islands, IOTA EU-002, on 24th-26th September 1993. Operation
is mainly for participating in the Scandinavian Activity
Contest.

We will activate all conventional bands 80-10M, SSB only,
single band at a time. The station is equipped with beams on
higher bands and wires on lowers. The amp will be taken with
(us).

For a sked, call before the contest starts --
+ 358, 400, 416, 891

The participants are OH2s - BAP Jyrki, BEJ Jorma, BMY Kari,
BUA Jukka, KM Ilpo, KIF Pertti, NGS Pena, and ZA Eljas.

QSL to callbook address.

Summary of activity

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) was quiet 30th August to 2nd September, and quiet to unsettled 27th to 29th.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values on 27th and 31st, and depressed by up to 30 per cent over the remainder of the period. Spread F was observed during night hours on 28th to 30th August, with sporadic E observed on 29th at night.

Forecast for the next week (3 - 9 September)

Solar : Low.

Geomagnetic: Quiet

Ionospheric: About 15 per cent below predicted monthly values.

Courtesy of IPS Radio and Space Services

ANARTS broadcast history de DX1 (VK2SG)

I first started in RTTY on 22 May 1975; shortly after that VK2EG (Bill) and myself started the New South Wales RTTY Group, with a few local enthusiasts. This group was later reorganised as the Australian National Amateur Radio Teleprinter Society (A.N.A.R.T.S.).

On the 3rd September 1976 the first news broadcast was made using the callsign of VK2WIA. A few weeks later the callsign was changed to VK2SG; at this time the DX Notes were included, mainly because the editor (VK2SG) just ran out of news for the broadcast.

During the following week a number of requests were received to include the DX Notes as a permanent feature, and so the DX Notes were started and became a permanent feature in the news.

It was realised at that time that the writing of the DX Notes was not a one person effort and could not be, so several people in the vicinity offered their assistance which was gladly accepted, but again we were running short of good DX, such as information from overseas, so we started looking to overseas information.

On the 19th February 1977 the new callsign VK2TTY was obtained from the Radio Department, and is still in use by ANARTS. When the new callsign was used, the DX Notes were rebroadcast on 21

and 28 MHz as well as 14 and 7 MHz. But due to propagation problems on 21 and 28 MHz these broadcasts were later deleted, and in their place a direct broadcast was made a day prior to the normal news broadcast, primarily to K7BV and I8AA, both of whom would rebroadcast to the stations in their areas. The basic idea was excellent, propagation and time availability did not always assist in transferring the DX Notes around though from reports received it did appear the DX information was being received around the world.

Of course, during this period the movement of DX was under continuous surveillance by numerous stations who would report back to VK2SG, who then had the onerous task of collecting the information and editing it into a chronological listing on a daily basis.

It proceeded along these lines until the middle 1980s when the late TG9VT joined the team. John made considerable intelligent suggestions to improve the layout of the Notes and the forwarding and receiving of the information. He was also responsible for the organising of the team that covered U.S.A., Europe, Africa, Asia, South America and various other areas where the DX wandered into at times. This situation continued until Johns demise.

Since then the Notes have continued with the remaining reporting team, everyone working very hard to keep the high standards up until early 1993 when VK2SG had to take a period in hospital. He later had to resign from the team due to health problems, he does hope to return to the team one day, but he is still not having much luck with his health.

After 17 years the DX Notes now cover the world of RTTY DX and is consistently reported by a team of very keen reporters who spend many hours searching the bands for all the good DX. At the moment they consist of I5FLN, W2JGR, WB2CJL, DJ3IR, ZS5S and many others.

As you can see the DX Notes are not a one man band - they consist of a team of dedicated DX chasers, I hope to be back with them soon.

Oh, a point, where did the DX1 come from? Well, many years ago I was asked was there a DXCC for RTTY, so I asked about it and received the first DXCC for RTTY in Australia.

So then the DX Notes were written by DX1.

de VK2SG/DX1 Syd

NOTES OF INTEREST:
9N1HL BY HENRY, DJ6JC, WAS ACTIVE ON THURSDAY ON 20M AROUND
1100Z. NO REPORTS OF QSOS YET RECEIVED. HIS LENGTH OF STAY IS
NOT KNOWN.

IT IS BELIEVED THAT SV2ASP/A MADE ONLY SIX DEMONSTRATION QSOS
ON RTTY, TWO OF WHICH WERE WITH IK5KKW AND PA0HVF. WE

ANXIOUSLY AWAIT ADDITIONAL ACTIVITY FROM MOUNT ATHOS.

JT1CS AND JT1/KB9IBZ SHOULD BE SIGNING FROM /JT3 THIS WEEK UNTIL 2 SEPT. QSL TO JR0CGJ.

WAKE ISLAND, KH9, WILL BE ACTIVATED BY A GROUP FROM CALIFORNIA POLY-TECH 31 AUGUST-10 SEPTEMBER. CALLSIGN NOT YET ANNOUNCED. QSL TO OKDXA, P.O. BOX 88, WELLSTON, OK 74881.

NAURU I., C2, WILL BE ACTIVATED BY A GROUP OF JAPANESE OPERATORS 8-13 SEPTEMBER.

The link with VK2AGE was lost at this point and the balance of the notes were not received by VK2BQS. It also appears that they were not available on any of the usual BBS sources despite the best efforts of the Broadcast Officer.

Coming events

September 25th-26th CQ/RTTY Journal RTTY Contest

October 16th-17th JARTS WW RTTY Contest

November 13th-14th WAE RTTY Contest

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.

The Internet address for the Broadcast Officer is :

patl@music.pitt.su.oz.au

(this address has changed now my workplace has its own LAN).

The Society welcomes news items on any digital subjects from anywhere within the broadcast footprint. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes the broadcast for this morning/evening.
de VK2TTY

Inserted by VK2BQS (Jim) Vice-President ANARTS.

1718. coax relay inquiry: Transco Products Inc. Los Ang. Calif????

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-07 01:50:01 UTC
From: wwg@fawlty.UUCP
Message-ID: <8@fawlty.UUCP>
Source record: 276906
Cross-posted to: sci.electronics,rec.radio.amateur.misc

A couple of local hams are looking for mailing addresses for

Transco Products Inc., of Los Angeles, Calif.

They want to inquire regarding some military spec coax switches
that were manufactured by this company. They don't seem to be
"listed" in the telephone book anymore.

Anyone out there knows if they moved on, expired or what?

Thanks in advance,

Warren VE3WWG.

No don't call. It ties everything up to long . I waited 9 weeks for
mine in 1991. You can expect the wait to be somwhat longer. Some here have
said 12 - 13 weeks.

Seriously guys, all I've heard so far in this thread is bitching about R-S not having what you want, not knowing what they have or how to use it, not posting your notices about upcoming events / club info / Amateur radio licensing requirements, etc.

Let me try to throw some gentle reasoning into this thread:

I just started working part time in a company owned store. I've also worked part in a dealership store. The two types of stores ARE different. A dealership is an independant store with the authority to market Radio Shack parts, equipment, and services, usually in conjunction with some other business line. My dealer store is also an office supplies store, a very good match, IMHO. A company owned store, on the other hand, is run by Radio Shack itself, handling only Radio Shack parts, equipment, and services. From what I've seen so far, it appears to be a very tightly controlled from the top company. As a sales representative, I can not / WILL NOT do anything not allowed by my manager. My store manager can not / WILL NOT do anything not allowed by the district manager. The district manager can not / WILL NOT...., etc.

Instead of just BITCHING about your problems on the net after the fact, ask right then to speak to the store manager. If the store manager's response does not satisfy you, politely ask for the telephone number and or address of their district manager. Address your query / problem up the chain of command. Remember that everyone is a person, deserving to be treated as a person. Not everyone knows as much about electronics / radio / computers as you or I do. You and I may not know as much about electronics / radio / computers as someone else does. I know a few things about radio that my manager doesn't. My Manager knows a few things about computers that I don't. All of us in the store help each other: teaching and demonstrating our strong areas; learning from their strong areas.

My manager and district manager both seem to be interested in ensuring that Radio Shack treats their customers as people. If anyone in any company, not just Radio Shack, doesn't treat you the way you deserve to be treated, it is only right that you let their supervisor know. Don't walk away mad. Let someone else directly above that person know about the problem. If you've been mistreated, chances are excellent other customers are also being mistreated. No company needs anyone mistreating anyone.

A saleman's job is to help someone find goods and or services to perform a job. Hand in hand with that job is the requirement to actually sell goods and services in the store. In my experience, a customer in the store is more perishable than a prospective customer on the phone. Not more important, just more perishable; If a clerk can't serve someone right there in front of you, they may walk out and there will never have another

chance to serve them. THIS IS TRUE EVERYWHERE, not just the subject of this thread. If a clerk is too busy with instore customers to look up an answer for you on the phone right then, ask if they will look for the item and call you back when they have a chance. Volunteer to call THEM back later if you are a toll call from the store. Asking for a callback gives a 2nd chance to still serve our most valuable people, our customers. Retail clerks, in ANY store, get VERY busy at times. We can NOT, as HARD as we try, please EVERYONE all the time. Please treat us as people, just as you wish to be treated as a person.

The above thoughts are not to be attributed to any other person, company, or organization. They are my personal opinions regarding life and how to get along with others. You are free to agree or dissagree with this message.

Chester F. Howes, N8GHF, <chowes@nyx.cs.du.edu>

1722. WEFAX equip./Opinions Wanted

1723. HamComm interface help needed (again)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-07 03:41:52 UTC
From: white@csusys.ctstateu.edu
Message-ID: <1993Sep6.224152.1@csusys.ctstateu.edu>
Source record: 276894

I still have a problem with HamComm (actually, with the interface).
I checked out the interface to the author's documentation, and it
appears to be in compliance (couldn't check the 741 square wave o/p,
'cause I don't have a scope).

Problem is, I cannot get the signal, as it is displayed on the HC analyzers,
to get above 150Hz. Could it be a problem with my Kenwood R1000? The signal
remains the same from both RECORD jack and EXT.SPEAKER jacks. Is there a
way to "move" the signal into the HC threshold of around 500Hz?
The display shows the CW, but it's too low to be interpreted by HC.
Any ideas appreciated.

Harry

My understanding is that not only the power is controlled by law, but
so is the antenna. Antennas are to have no more than 3db gain (I was
told) and the 5db antennas are the same old "db over what?" tricks we
have all seen for years. I'm sure you will get better answers than
this but thought I would pass this much along. Again, the above info
is just something I was told (by a cell designer and engineer). I have
no formal backup for it.

Have you tried to power the interface from 9 V batteries instead ?
I had problems too, but after I have removed the diodes and the capacitors
and started using batteries instead of the RS232 port as power supply
it works just fine.

Archive-name: radio/ham-radio/faq/part1
Revision: 3.11 09/05/93 04:53:37

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.announce.newusers
newsgroup before posting any articles. If you are an experienced user, please
help by refraining from answering frequently-asked questions on the newsgroup
if they are already answered by the FAQ articles. Instead, send e-mail to the
user who asked the question. (It will be helpful if you include the part of
the FAQ that answers their question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana

established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civ-

ilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail

from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the Novice tests, it's free. To take the Technician or higher class tests, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests can be given by any two qualified hams of General class license or above. The Technician tests and all higher class license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).

* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. A list of UseNet Elmers and their e-mail addresses is posted to the newsgroup monthly. If anyone wants to be an Elmer, send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a look around the FTP archives and e-mail servers listed in Part 2. There's so much out there on UseNet, you'll find plenty of things you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

Antennas can be much simpler projects than the transceiver, though some types are also quite involved. Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common

antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books from many sources, including ARRL and several Hams, discuss antennas in depth.

When building or even understanding antennas, it is good to know the relationship between the antenna element length and the frequency or wavelength it is designed for. An antenna performs best at multiples of 1/4 of that wavelength, though 5/8 wave also has beneficial qualities. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

1729. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media
including UseNet, electronic mail, the Internet, dialup bulletin board
systems (BBS) and others. Various electronic information sources are
```

summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There are several newsgroups dealing with Amateur Radio and other aspects of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*). It is also cross-posted to rec.answers (the archive for FAQs in the rec.* newsgroups) and to news.answers (UseNet's general repository for FAQs.) These should be the first places to look for new current copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting Amateur Radio in the USA. They have established an automated file server which responds to information requests via electronic mail.

To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.cupertino.ca.us. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)
NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Tom Czarnik coordinates a fairly definitive list of anonymous FTP
sites, their IP numbers, time zones, general contents, and access
policies which he posts to the comp.misc, comp.sources.wanted,
alt.sources.wanted, and news.answers newsgroups. It is itself
available via anonymous FTP (how about that?? :-) from (among other
places) rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has

installed the "archie" program on your machine and use it. Archie may also be accessed by telnetting to one of the following sites (use the one closest to you):

Finland/Europe: archie.funet.fi
Canada: archie.mcgill.ca
Australia/New Zealand: archie.au
Israel: cs.huji.ac.il
UK/Ireland: raquel.doc.ic.ac.uk
USA (Maryland): archie.sura.net
USA (Nebraska): archie.unl.edu
USA (New York): archie.ans.net
USA (New Jersey): archie.rutgers.edu

Login is archie. Type "help" at the prompt for a description of all server commands.

For those without telnet capability, the database may be accessed non-interactively via mail server. Send E-mail with the word "help" to archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are extremely powerful tools for finding out "what's out there" at various FTP sites around the world. *PLEASE* exhaust their capabilities before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu
(submissions to this ftp site should be made to bowen@cs.buffalo.edu) - contains many ham radio files, including the FAQs, Elmer list, SWL and scanner info, Packet FAQ, examination opportunities, information on various regulations, information on commercial radios (i.e. GE or Motorola), SSTV (slow-scan TV), HTs (handheld transceivers) and the KA2UGQ worldwide BBS list. See ~pub/ham-radio. This FAQ is updated monthly here.
grivel.une.edu.au
This site contains a mirror of ftp.cs.buffalo.edu's Ham Radio archives. It provides a shorter distance if you're in Australia or if Australia is a shorter net.path for you than New York.
nic.funet.fi
This is one of the largest FTP sites in Europe and maybe the most popular. There are many directories of Ham-related files in /pub/ham. /pub/ham/info contains a mirror of Buffalo. Other topics available here include amiga, antenna, HF, packet, satellite, scanners, program sources, VHF and others.
ftp.uu.net
A large FTP site in the USA - UUNET contains sources and binaries for many different types of computers.

wsmr-simtel20.army.mil
Keith Peterson, W8SDZ, has apparently returned as the
maintainer of this huge repository of ham-radio (software and
modifications), MS-DOS, and CP/M files. To find out how
to submit files to this archive, please read his informational
posts to the comp.binaries.ibm.pc.archives newsgroup. If you
cannot directly FTP from wsmr-simtel20, there is a mail server
that can help. Send mail with the text "help" to
listserv@vm.ecs.rpi.edu.
wuarchive.wustl.edu
A "mirror" of the files available on Simtel20, plus a *LOT*
more. A more user-friendly Unix environment (plus a faster
net connection) makes this site preferred over Simtel20.
If you are on a Unix box locally, see if your system
administrator will "NFS-mount" these files for faster/easier
access.
ucsd.edu
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
uxc.cso.uiuc.edu
cd pub/ham-radio - This site contains the HyperCard Hamstacks
written by Diana Carlson as well as ASCII readable ham radio
question pools.
ftp.apple.com
cd pub/ham-radio - Ham software and information, especially
Macintosh software
wolfen.cc.uow.edu.au
athene.uni-paderborn.de
ham radio files and software for the Amiga computer system
rtfm.mit.edu
cd pub/usenet/news.answers - all participating FAQs and
periodic informational postings are archived here, including
those from the rec.radio.* newsgroups which can be found in
pub/usenet/news.answers/radio. Participating FAQs are
automatically archived here when they are posted on UseNet.
ftp.amdahl.com
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,
telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files

foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z

quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word
"subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command
words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to
the mail list addresses at ucsd.edu. Since rec.radio.info is a
moderated newsgroup, requests to post to it may be sent to Radio-Info
but they will be mailed to the moderator,
rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu
under subdirectory mailarchives/{mail-list-name}. However, Radio-Info
is not archived at UCSD because almost everything is either on one of
the other lists or in the news.answers archives at rtfm.mit.edu.

To subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP,
login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of
other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder.
The number is 203-666-0578. More information can be obtained from
the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on
the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB
HAM-server. Also see many of the FTP sites listed earlier in this
section. There is now way to keep a list like this anywhere near
up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
If you are at an Internet site you can connect using telnet to one
of the two primary servers:

callsign.cs.buffalo.edu
ham.njit.edu

There is also a general geographical name server at:

martini.eecs.umich.edu

The callbook servers sit on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns, separated by spaces. For Canadian calls, use the callserver at REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an OS interface to the MBL packet BBS using the Buckmaster CD-ROM callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet network, *NOT* the Internet. If you attempt to send Internet mail to this address, and use the old .NA suffix instead of the new .NOAM suffix, it will get routed to Nimibia (Internet suffix .na) which is currently paying a lot of money for misdirected ham mail. Help maintain a positive example for amateur radio and please do not attempt this!

The FCC "call sign hotline" at 717-337-1212 is available for those who wish to listen to the call signs allocated in each group for each

district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
Since the latest changes to it, there are no known FTP sites with
a current copy.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
Some mods can be found on wsmr-simtel20.army.mil or
the Simtel20 mirror directories on wuarchive.wustl.edu.

There is a new server at pcserver@novell.business.uwo.ca. Some
examples of main body email requests are as follows:
HELP
SENDME RADIO MODS
SENDME TH215 MODS
SENDME ALLBAND MODS

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is sometimes a frequent question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are
available from the ARRL e-mail file server (see above). They want
direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones

(this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However, rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N3FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR

203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it thru 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century

Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for

local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

In one example of someone's effort to bridge the information gap, there is a new repeater-mapping project which can automatically accept entries via e-mail. If you can get enough details about a repeater for a complete listing, you may want to help by submitting an entry. For more information, use the following e-mail addresses:

repeaters@wattres.sj.ca.us
Just send a message with only the word "help" in the message body. The project's software will reply with instructions.
steve@wattres.sj.ca.us
For other questions (Steve Watt KD6GGD)

As soon as the list is big enough to be useful, the project will make it available electronically. That will mean one less "why isn't it available electronically" question for the net.

1730. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-07 09:43:12 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
```

Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and

does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a

reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to
your country. See the country-specific newsgroups in "the rec.radio.*
newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get
a license in your country. See also the ARRL e-mail server. (Details
are in Part 2.)

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send
it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)?
Editor's note (11/92): the regulations affecting this question are
being changed. Contact your local Volunteer Examiner (VE) and ask
about a VE 60-day pass. More details will be included in future
revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines apply:
* A reciprocal license is required in all foreign countries (that have a reciprocal operating agreement with the US), except Canada, where the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them which country you are going to visit and they will send you the info and an application form. Foreign hams can likewise request information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur license (ie, notarized copy), and fee if applicable (use a bank draft of a bank that does business in that country) to the appropriate licensing administration of the foreign country. Processing may take 30 to 90 days.
* If less than one month, you could try sending the application and pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment into their country without a license or permit. If you applied, but haven't received the permit yet, show the copy and your FCC license to the customs officer, however, the equipment may still be held at customs until your departure.
* Be sure to use only those frequencies covered by your FCC license which are also used in the foreign country, unless otherwise authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief via PRB-1. Meet with the local government and seek an informal compromise. It is possible to win in court...but it's expensive and time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.

* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various aspects of electromagnetic interference. The filenames start with "EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI), EMI-AUDIO (interference to audio devices), etc.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840

W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)
KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you

check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur

Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW

and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

I have been using a Drake TR7 as a an auxillary receiver to my IC761.

There is a jumper in the back that connects the receiver to the antenna
relay in the 761. I put a T in there and ran a coax over to the TR7.

Of course I musn't transmit on the TR7. The TR7 isn't muted it is just
disconnected by the antenna relay on the 761.

When a DX station is working split I listen to the DX station on the TR7
and tune for the station he is working on the 761. I find that I can
usually tailgate the station he is working and get him in one or two calls.

This is all CW of course.

I'm not sure what other rigs have such a jumper on the antenna connection
to the receiver. All I can say is this worked well for me.

[Discussion of cellular operation using gain antennas in fringe area]

>I wonder if you might be able to get Down East Microwave to custom
>cut you a yagi for 850 Mhz?

One of the problems with using gain antennas for cellular is
the broad bandwidth required does not match the tuning characteristics
inherent in most designs. Generally speaking, the higher the
gain, the more highly tuned the antenna.

There are several commercially available yagi's for cellular use.
Maxrad, Antenna Specialists, Larsen and others make these.
Most of these are 3 to 6 db gain units. A good source for these
is "Cellular Wholesalers" or "Communications Associates", both
wholesale houses with 800 numbers. (I'm at home right now,
phone list is at office..sorry) (Be sure to act like a not too
bright cellphone retailer when you call, not an enduser, neither is
too keen on selling to endusers.)

Also: Remember that you are dealing with a line of sight propogation
characteristic here. Antenna height is very important. Also remember
that the coax you use will be very important, RG-58A is very lossy
at 850 mhz. Consider the use of either Andrew Heliax (1/2" or 5/8")
or Belden 9913 type low loss cable, with the matching type N connectors.
I'd use low loss cable for anything over 12-20' of feed.

I have bought TNC to N adapters at hamfests. I also bought some
"better than 9913" low loss coax from "Cable Experts" at a local
hamfest that works very well at 800 mhz for the cost. There is
a type of low loss coax cable that is almost the small diameter
of RG-58 called "ProFlex" that might also be useful to you.

So, if you use the right antenna, coax, a 20' mast on top of the
residence, and aim it carefully, you might be satisfied with the
result. Also be sure to use Coax Seal to waterproof the connector
on the antenna. Careful attention to detail is required when working
with 800 mhz to get reliable long term results.

I've used these techniques to provide cellular operation in deep
fringe area for alarm service transmissions and datacom in the past.
They should work for you as well, based on the info you have provided.

BTW, be sure to check out the roaming arrangements and costs with
the carriers involved. Roaming is not always simple or cheap.

Yeah, a loop yagi will work for this application. But you'll likely
need more than one. A 4 bay H frame might do the job. Down East
makes a 900 MHz 19 dbd antenna that could probably be tweaked.
Cable loss is going to be a big issue. You could run a mast
mount preamp and power amp, but due to the duplex nature of the
phone, it could get tricky.

We do a similar thing with our TV remote trucks. It's difficult
to get flexible cable with low enough loss, so we mast mount
our amps. In our case, we use a 10 watt 2 GHz transmitter in
the truck to drive a 10 watt amp at the top of the mast. There's
enough loss in the flex cable to make it work right. You could
do a similar thing by using a cellular amp intended for handhelds
used in a car. They are already equipped with the preamp and
duplexer you need. 30-40 feet of RG9 should have enough loss
to make it all work right.

I recently purchased a Kenwood TS-50s to use as a portable rig when I travel. Unfortunately, the power supplies currently available are several times the size of the radio.

Does anyone have any information on compact, high current power supplies that might be used in this application? I guess that I'm looking for a power supply about the size of the radio that puts out 20 amps. Is this technically possible? Does anyone make one?

Thanks

Bill

> 3. Call them.

YES, NO, and NO.

Don't bother the FCC folks. All that is likely to accomplish is to slow things down even further, as they spend their time answering phone calls instead of entering the data needed to generate callsigns.

Once they've entered the data and got things to the point where they can tell you anything useful about your new callsign, it is already on its way to you. They seem to be pretty quick about mailing them out once they've been prepared; the delay is just in getting the info into the computers in the first place, or so it appears.

Judging from the new calls in this area, the current delay time is around 13-14 weeks, so just be patient. It's frustrating, I know, but calling them won't speed it up, and your experience is normal right now, so there's no reason to think your application has gotten lost or somesuch.

>lose it).

I suspect the system is operating in complete agreement with FCC
requirements for population or geographic coverage in the CGSA or
RSA they are licensed for. The FCC recognizes cellular systems
are a business and not a philanthropic venture. Here are a few
things you might think about in evaluating your situation. In the
United States, total capital investment allocated to a cell site
is in the range of $1,000,000. Each cell serves, on average, about
1000 customers. Will the costs of putting a cell site
in your area justify the investment? Are there 1000 potential
subscribers in your area? If it were your money, would you build
one?

EIA/TIA Standard 553, "Mobile Station - Land Station Compatibility
Specification," covers analog cellular mobile station power
levels. Many people don't know the cellular system controls
the mobile unit power levels to reduce adjacent and co-channel
interference. A 0.6 watt portable is known in IS-553 as
a Class III mobile station of -2 dbW. This type of station
is set to one of 6 power levels from the -2 dbW maximum to
-22 dbW. A Class I conventional mobile station has a maximum
power level of +6dbW or 4 watts. These power levels are ERP
with respect to a half-wave dipole. This specification is available
from the EIA for $27.00. The address is:

Electronic Industries Association
Engineering Department
2001 Pennsylvania Ave. N.W.

Washington, D.C. 20006

If you are in the primary coverage area of a cell, the system
will command your mobile to the appropriate power level without
regard to the type of antenna used. If the minimum power level
the mobile station can assume still hits the cell site rx too
hard, the mobile can be locked out as a defective unit.

Using a beam antenna from far away can make your mobile station
appear to be within the primary coverage of the cell site and
it should operate in a normal manner. I am not familiar with
any prohibition concerning use of gain antennas, but the system
will assume IS-553 requirements on ERP are met.

>I wonder if you might be able to get Down East Microwave to custom
>cut you a yagi for 850 Mhz?
>
>Any suggestions appreciated!
>
Many manufacturers produce cellular yagis. One could
hack together a 6 or 8 element yagi out of a broomstick and
coathangers and try it. Assuming performance is as desired, a
better antenna could be constructed or purchased.

No, what my original posting sought was a program to take a set
of S parameters and crunch them into a linear, small signal
fet/bjt model - ie given the S params, gm, etc, produce a set of
component values that closely fit the measured parameters of
the transistor. SuperCompact can do this; I am looking for a lower
(ie freeware) alternative to SuperCompact. Getting spice to print
the h/s/z/y params for a specified circuit is something I already
know how to do ;-)

>

I don't see how this is ever going to be a problem. If you are a Tech+, then you have passed elements 1a,2,3a. To upgrade to *anything* you must pass at least element 3b for General, and thus also element 1b. So, you must be able to do 13wpm, and element 1a is not required for element 1b. (If you can do 13wpm, you can definitely do 5wpm--if you don't fall asleep during the test. :-) Therefore, if you are a Tech+, there is still no reason to take the CSCE to the testing session, unless you plan to operate some HF before passing (hopefully!) elements 1b and 3b. You just need to bring the original and a copy of your Tech license.

> Or, since you'll be taking the 13 WPM before the 5 WPM, you really don't
> have to prove you passed the 5WPM.

As stated above, you will never have to prove it at a testing session (if you are a Tech+ or above).

: My understanding is that not only the power is controlled by law, but
: so is the antenna. Antennas are to have no more than 3db gain (I was
: told) and the 5db antennas are the same old "db over what?" tricks we
: have all seen for years. I'm sure you will get better answers than
: this but thought I would pass this much along. Again, the above info
: is just something I was told (by a cell designer and engineer). I have
: no formal backup for it.

: 73, Gary - AG0Na

Out here in the land of gold we have road side cell phones for road side emergency help. Most have the normal center loaded whip on top, but a I have seen a couple with real nice 4 element beams on top. Dear me, they must be breaking the law :-). I think the short answer is, don't use a gain antenna in the metro area, but if you need the gain, use it. I am sure the Colorado cell company will be more than happy to provide you service and take your money. Since you will not be hopping cells in this situation, I see no reason why you should not use some gain to access the cell.

: it, since I see Radio Shack advertising antennas which have "5 db gain".

: I wonder if you might be able to get Down East Microwave to custom
: cut you a yagi for 850 Mhz?

Hi Bob!

I'd thought about building something like this as a product - you
could stick it in your trunk, and if you were ever in a fringe area and
had an emergency, just pull out the yagi. The Yagi only needs to be about
7 inches wide, and you should be able to get 10-12 dB with less than a
2-ft. Boom. You might want the boom to disassemble into 2 sections.
This brings up some questions I've always had:

1. When your cellphone is on receive, does it only listen to one frequency,
or does it scan a series of frequencies?

2. What is the absolute lowest and highest frequencies used by cellular
telephone ?

3. What is the characteristic impedance that the phone wants to drive...
50 or 75 ohms? What is the typical cable used - RG-8X, RG-6?

4. What kind of connector does your cell phone have? BNC? N?

5. Is there really no law regarding antenna size and cellular phone? If there is a maximum radiated power restriction, you could always advertise the antenna as intended for .6W units, with the wink-wink-wink that people will really stick this on 3W units :-).

6. What does the Radio-Shack 5dB gain antenna look like? Is it a vertical, or a yagi? And, as with all antennas, what is the 5dB relative to? An isotropic radiator, a dipole, a 'typical car-mount antenna', or a typical whip on the cell-phone?

I'd be interested in working with you on this problem - run some designs through YAGIMAX, etc. If you can get me the answers to the above questions.

* MARS OBSERVER NEWS *
======================
NASA lost radio contact with its Mars Observer spacecraft on Saturday August 21, 1993, just days before it was expected to enter into a circular orbit 400 km above the surface of the planet. Orbit insertion was supposed to have occured on Tuesday August 24th at about 1:30 PM Pacific Daylight Time. The spacecraft was expected to begin global surface mapping of Mars on December 16th that would have lasted an entire Martian year of 687 Earth days.

Various attempts were made to re-establish contact with the spacecraft, but so far the Mars Observer has remained silent. NASA engineers believe a transistor in the satellite's clock failed, rendering the Mars Observer "brain-dead" and radio silent. It seems improbable that the spacecraft automatically entered into orbit around Mars, and probably missed its destination completely.

The Mars Observer was launched on September 25, 1992 on a Titan III rocket from Cape Canveral Air Force Station, Florida. On July 26, 1993 at 8:52 PM PDT, the Mars Observer returned its first image of Mars when it was 5.8 million kilometers from the red planet. That image was taken using the spacecraft's high resolution, narrow angle telescopic camera.

In 1976 an unmanned NASA Viking spacecraft sucessfully photographed the surface of Mars from an altitude of approximately 1700 kilometers. The objective of the Viking mission was to search for evidence of intelligent life on Mars, either now or in the past. Image 35A72 taken by Viking-1 and received by the Jet Propulsion Lab showed a mile-long, 1500 foot high humanoid "face" staring into eternity on the surface of Mars. It was later dismissed without investigation by NASA as a "trick of light and shadow" and filed away. Frame 70A13 taken over the same area with a higher sun-angle showed the same feature in addition to a pyramid-like structure approximately 16 kilometers southwest of the "face".

In 1980, Vicent DiPietro and Gregory Molenaar, imaging engineers under contract to NASA's Goddard Space Flight Center on another project, stumbled across these Viking images. After further investigation they discovered folds and horizontal stripes on the "headpiece" or "helmet" of the face which resembled those of Egyptian Pharaohs, symmetrical cheekbones, an eye socket, eyeball, and pupil, nose, mouth, and teeth. The facial proportions were found to be similar to those of early man. DiPietro and Molenaar published their findings and conclusions in 1980 and were stonewalled by the planetary science community for doing so.

In a feature article in "Soviet Life" magazine published in 1984, the Russians revealed their own fascination with the Martian "sphinx" and five-sided pyramids found in the Viking photos.

In an effort to carry out their own investigations, the former USSR launched Phobos I and Phobos II, two unmanned satellites to the planet Mars on July 12, 1988. The reason for launching two craft was for redundancy in case one malfunctioned. Phobos I was lost after it received a bad command during its journey to Mars and fell silent when controllers tried to re-acquire it on the way. Phobos II arrived in January 1989 and entered an orbit around Mars as the first phase towards its real destination, a small Martian moon called Phobos. The mission was flawless until the craft aligned itself with Phobos. On March 28, 1989, an elliptical object was detected to be moving towards the satellite seconds before it failed. All indications were that the elliptical object had collided with the satellite which was now dead and left spinning out of control.

On March 28, 1989 Tass, the official Soviet news agency stated: "Phobos II failed to communicate with Earth as scheduled after completing an operation yesterday around the Martian moon Phobos. Scientists at mission control have been unable to establish stable radio contact."

The next day a top official of the Soviet Space Agency (Glavkosmos) stated: "Phobos II is 99% lost for good." It is important to note that he stated the entire satellite was gone and not that just radio contact was lost with it.

On March 30, 1989 at 4:41 PM EST, the Associated Press released the following statement: "Soviet research centers are now trying to interpret so far 'unexplained optical phonomena' on the pictures of the Martian surface. The pictures show an inigmatic strip 23-25 miles wide and a large spindle-shaped formation."

On March 31, 1989 headlines dispatched by the Moscow correspondents of the European News Agency (EFE) stated: "Phobos 2 Captured Strange Photos of Mars Before Losing Contact With It's Base. Vremya revealed yesterday that the space probe Phobos II, which was orbiting above Mars when Soviet scientists lost contact with it on Monday, had photographed an unidentified object on the Martian surface seconds before losing contact." Scientists described the unidentified object as a thin ellipse 20 kilometers in length. It was further stated that the photos could not be an illusion because they were captured by 2 different color cameras as well as cameras taking infrared shots.

One controller at the Kaliningrad control center concluded that the Phobos II probe was left spinning out of control, a result of being struck or shot. In the October 19, 1989 issue of Nature Magazine, Soviet scientists concluded that the craft could be spinning because it was impacted.

Not since the NASA Viking missions in 1976 has there been a successful unmanned mission to Mars. NASA's Mars Observer is simply the latest in a series of spacecraft destined for Mars that failed unexpectedly just prior to reaching the planet.

The mystery continues.

* ITAMSAT NEWS *
==========
On Friday August 13th, the Ariane 49 launch vehicle was rolled out of the assembly building and moved to its launch pad. On Monday August 16th, the ITAMSAT spacecraft was mated on the ASAP plattform in its final flight configuration. The bolt cutter and separation spring was installed and the umblical cable connected to the launch vehicle bus. Due to the uncertainly of the launch date, the team decided to launch ITAMSAT in an off configuration with the battery fully charged, but not connected to the payloads until after separation. Thus no trickle charge is required and on J-0 a full battery charging will be performed, on J-5 the fairing containing the ASAP and the Spot-3 will be closed and moved on the top of the Ariane launcher.

The Ariane launch has been delayed and has now been set for 24-Sep-93. Further short-term delays are also possible.

Car alarms seem to be unshielded and use very broadbanded front ends on their receivers. If you want some fun, drive thru a parking garage while
talking on either 2m or 70cm using typical mobile power levels. I guarantee you'll have the whole place beeping and squeeling in seconds.

Ed Mitchell

MONDAY SEPTEMBER 6, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* NOAA-13 NEWS *
================
Satellite controllers lost contact with the NOAA-13 satellite on Saturday 21-Aug-93, and preliminary indications are that the spacecraft's power system is not working, according to officials at NASA and the National Oceanic and Atmospheric Administration.

All battery charging aboard the satellite ceased at approximately 3:45 PM EDT 21-Aug-93, according to Charles E. Thienel, Meteorological Satellites Project Manager at NASA's Goddard Space Flight Center, Greenbelt, Maryland. Contact with the spacecraft during subsequent ground passes showed steadily decreasing battery voltages and currents, he said.

Output from the solar arrays continued to be normal, Thienel said, indicating a failure in the circuitry between the solar arrays and the batteries. There has been no contact with the spacecraft since approximately 7:15 PM EDT 21-Aug-93.

The spacecraft was launched by the U.S. Air Force from Vandenberg Air Force Base, California on 09-Aug-93. Spacecraft operations were turned over to NOAA on 12-Aug-93 as a part of planned checkout procedures. Instrument checkouts were continuing at the time of the failure.

NOAA-13 is the newest in a series of polar-orbiting weather satellites. It is designed to monitor the Earth's ocean and atmosphere. It collects meteorological and ocean data for direct transmission to users around the world and to central data processing centers.

NOAA-11, which NOAA-13 was planned to replace, was launched in September 1988 and NOAA-12 in May 1991. Both are providing environmental data to users around the world. NOAA officials said the problem with NOAA-13 would not affect weather coverage. Instruments on NOAA-11 and NOAA-12 are providing full coverage. NOAA-13 was called up to ensure continuity of data because

of degradation in NOAA-11's instruments and spacecraft subsystems.

The spacecraft was built by Martin Marietta Astro Space in East Windsor, NJ. The spacecraft completed its initial functional and environmental testing in early 1990. The spacecraft then was held in standby with routinely scheduled aliveness testing until March 1993, when it went through complete functional checkout in preparation for launch.

[Info via NASA]

* FO-20 SCHEDULE *
==========
The following is the latest FO-20 mode JA transponder schedule from the JARL:

01-Sep-93 09:05 through 02-Sep-93 09:25 UTC
08-Sep-93 09:30 through 09-Sep-93 07:58 UTC
22-Sep-93 08:30 through 24-Sep-93 09:05 UTC
29-Sep-93 08:50 through 30-Sep-93 09:11 UTC

There will be no planned Mode JA operations on 15-Sep-93 so there are two Mode JA days the following week starting the 22nd.

This seems to be a common problem with ICOM radios. The answer is to
open up the radio and turn up the mic gain/deviation. I did this on my 2410
and the audio reports went from "low" to "great".

Sorry but I don't know what control applies on the 229.

I have been very pleased with the HTX-202. There is essentially no problem with intermod. There are NO mods available, however.

||> if they are the ones who gave you the original exam. They would have
||> records of your first test. Asking an examiner to run with a photocopy of
||> the original license is strictly speaking, illegal.

| . . . I would never surrender the original. It is the only
|proof that I ever passed any test. You can see it if you insist, but all you
|get stapled to the 610 is a copy.

Well, the VEs *will* insist on seeing it. They don't want to keep it or
send it in; that's why they ALSO want a photocopy. But the VEC rules,
which may or may not be based on an FCC requirement, require that the
VEs verify the photocopy that goes with the 610 against the original.

|As further evidence, I submit the following from Part 97.13(c):
| Application for renewal and/or modification of an amateur
| operator license shall be submitted on FCC Form 610 and shall be
| accompanied by the applicant's license or a photocopy thereof.

|Seems pretty clear to me. A copy is OK for the FCC, I don't see how a VE can
|expect more.

As I said, they only want to look at it. They also will only want to
keep a photocopy.

[Article crossposted from rec.ham-radio]
[Author was Rudy Bakalov]
[Posted on 7 Sep 1993 15:31:16 GMT]

Hi everybody,
I got my Extra license and now I am looking for a good HF
transceiver. Your advice will be highly appreciated.
I cannot afford more than $1700 so I am looking at small radios
like FT-890 and ICOM. I have used all the KENWOOD models up to TS930 and
I didn't like them at all. I doubt it I will even consider a KENWOOD
unless someone convinces me that they have changed the design.
I am looking for a good DX/contest radio. It must be capable of
working long hours on the air and of brutal QRM. I used to use FT757 as a
RX and TS930 as a TX; I don't want to use two radios anymore nor I can
afford it.
I also wonder if I need a built-in antenna tuner. I realize it is
a good protection against poor SWR, but I don't think I will ever try to
use my 2m HT antenna. Plus, I really like the MFJ's Versa tuner. Shall I
invest my money in extra filters instead?
I also must make sure the power supply can handle 220 VAC since I
will be leaving for Germany soon.
As you can see I am very picky and that is why I need some advice.
I look forward to hearing from you.

> >band, for a single encoding scheme, where the digital folks use less
> >than 30khz in common usage for RTTY, Amtor, Pactor, clover, etc. The

The standard "rule of thumb" (or should that be "rule of fist"? :-))
for calculating the "bandwidth" of a CW signal is:

BW(Hz) = 4 x Words/Minute

Therefore, even a "fast fist" of 30 WPM is only occupying a bandwidth
of about 120Hz! 50 to 60 Hz (not KHz) is equiv to 13 - 15 WPM, a very
common CW rate.

The RTTY, Pactor, etc folks are restricted to using the same bandwidth
as the "voice" channel in that band; which for HF purposes implies 2.4
KHz, not 30KHz.

> 50khz ? CW doesn't use any 'encoding' schemes. You turn the transmitter
> on, you turn the transmitter off. It emits a single wave on a single
> frequency. Very little bandwidth - certainly not 'anywhere' near 50khz.
> Geezzz SSB's only 2.5khz of bandwidth, or so.
>

In reality, the transmitter isn't just "turned on . . . turned off";
if you look at the actual transmitter RF output you'll find that the
amplitude of the signal has a rise/fall time of about 5msec. If the
sine wave wasn't ramped-up/-down then the harmonics caused by the
discontinuity (of going from "0V" to "non-0V") would be much higher.
However, you are right that (for the most part) the CW signal has very
little bandwidth; the only time the signal has ANY bandwidth to
measure is at rise/fall of the RF, and if the VCO has any "jitter".

If anyone needs a RI sked for WAS, I am doing my annual run of the
Rhode Island counties on the CW County Hunters Net (14056 kHz+-) this
Sunday.

I will be found in various RI counties off and on all day Sunday, running
100 watts CW mobile. I plan to put out all RI counties. QSL 100% sure via
ARRL HQ or the MARAC mobile bureau.

I can QSY to 40 meters for more local contacts, or 15 meters for Novice/
Technician contacts. If Sunday day is not convenient, I can jump on
from the motel on Sunday evening. Look for me around 14056 or 7035,
or by sked.

I too live in one of those "covenanted" neighborhoods. I "built" my house there, that is to say, I had my builder buy the empty lot of my choice (the developer gave me a map, I drove thru the area, I picked the lot, I told the builder which lot#), then had him build my house; I didn't buy a pre-existing house. After the house was finished we went to the closing. We signed our lives away. NOWHERE in that process did the developer EVER show us the covenants; in the "Deed" the covenants are not stated directly, but in fact direct you to another document filed at the County Courthouse.

Because of this, I refute anyone who claims that "You agreed to the stipulations!" !

We have one of these switches in our ham shack here and I just had to do some work on it and documented what it looked like inside. If you can't find any other source of information on it I could forward what I have on our switch.

based on net wisdom, i am learning to use my brand new kent
iambic paddle with my left hand (i am a rightie), and was just
wondering if i should reverse the dot and dash connections so
that the dot is on the thumb and dash on the forefinger. ie.,
as opposed to the standard righthand construction with right thumb
sending dots and the forefinger sending dashes.

are there any compelling reasons for having the dots on the left
paddle????

curiously,

I believe that the requirement to see a copy of the original before
accepting a photocopy (some examiners also like to make their own
photocopies) is reasonable. Given how easy it is to alter things and then
copy them, I think that seeing the original just makes its easier for the VE
to ensure that the process will flow properly and without unnecessary
problems.

Lucky you. I went to Radio Shack today in Nashua NH and they wanted $2.95
for their new catalog. But it has $8.00 in coupons in it. I offered to
let them keep the coupons and give me the catalog (they end up $5.05 ahead
than if I gave the 2.95, but then cost them $8.00 in savings later).

The salesdroid said, "duh, no".

: through the area would most benefit from, I really had to wonder.

: Now it is entirely possible that this omission is the only one in the book,
: but since I am not as familiar with other area (hence the interest in such
: a book) how can I be sure the appropriate repeaters are covered elsewhere?

And others had some similar concerns. Sounds like there is no such thing
as the ideal repeater directory yet. Is there some sort of concensus about
what would be in the ideal? Like I've already posted, I don't really
like the ARRL directory because in an unfamiliar area, it's hard to use it
to determine where the repeaters really are. The maps _seem_ like a good
idea, and I think even for California, it would be possible with N and S
maps and some local area maps (LA and Bay Areas, for example) to do a
respectable job in perhaps 4 sides of 8.5"x11". But maybe you'd have to
supplement the maps with text listings for all the various features.
Perhaps the map would just have the frequency and call, perhaps color
coded as to "wide area," "local," "a primary, high-activity repeater,"
.. anything else?

I started to transcribe the ARRL list, updated from on the air observations,
for Washington state. My list is geographical, but with entries like
Seattle:Everett:Mt. Pilchuck, so you can tell that it's in the Seattle
area, generally, and more specifically somewhere near Everett. But I
don't have a good way to indicate "High Activity," "Low Activity,"
"Always someone helpful around," etc. Even at one line per repeater,
2 meters fills both sides of an 8.5x11 page with "standard" size printing.
And that's for a state not known for a really large ham population.

Actually, you are to provide both at a VE examination. The copy gets sent in
with the 610. The original is for inspection by the examiners to insure that
the copy is ligit and hasn't been altered in some way. Without the original,
the examiners are supposed to let you take the exam, provided you have
proved to them to their satisfaction that you are who you claim to be,
but issue only a CSCE.

1771. Is This SAFE?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-07 18:26:39 UTC
From: Jim_Showalter@Taligent.com
Message-ID: <Jim_Showalter-070993111431@jimsquad.taligent.com>
Source record: 276843

We are very interested in a parcel of real estate located on Mt. Madonna. However, the parcel is no more than 200 yards from the biggest antenna we've ever seen (except for the Mt. Sutro tower). We have two questions:

1) Can one of you radio experts identify what kind of tower we're talking about from a description? The tower is very tall (we're guessing 600+ feet),
and very thin. Except for the very pinnacle, it has a triangular cross-section
of constant size, probably less than ten feet on a side. It looks to be made
of aluminum, and is secured with a number of cables angling off in three directions. It has several small, light blue disks attached to it at various points
up the sides, which we assume are for microwave. It has a number of navigation hazard lights up the side. You can easily see this tower from Morgan Hill, Gilroy, and the backside of Mt. Umunum, and probably from Watsonville and Monterey as well. It is located a few miles from Mt. Madonna
park, in what we believe is a north-north-west direction away from the park.
So, from that, can anyone tell us what kind of antenna this is? Does it take
in microwaves and rebroadcast them as radio waves, or does it take in radio waves and rebroadcast them as microwaves, or what?

2) Assuming you can identify the type of antenna in #1 above, is it save to build a house no more than 200 yards from this antenna, or not? A recent Swedish study of low frequency electromagnetic waves showed
that there is indeed an elevated risk of contracting cancer by living near electric power lines, but those lines are high voltage and low frequency. Has
anyone ever shown a cancer link to high frequency radiation at the kinds of voltages used in this antenna? Any help on this would be greatly appreciated.

>And that's for a state not known for a really large ham population.

Just my $0.02 worth: The ARRL Repeater Book is a crock! I couldn't care
less about the repeaters in other states, well...90% of the time! What I
would like to be able to get is ACCURATE, UP TO DATE, information about the
repeaters in the Southern California area....someone does just such a list,
for the L.A./Orange county areas, but it's hard to find, Henry Radio has it
once in a while. If the ARRL would make each SM area responsible for publishing
a little monograph about the repeaters say..once a quarter, or have the same
information available via a BBS/packet connection, that would solve the problem.

The biggest hassle with the repeaters out here and now is the large number of
totally uncoordinated systems being dumped on the air by the hispanic ops who
CLAIM that TASMA, etal are not responsive to their needs...yeah right! In most

cases this results in just OTA interference but in some cases, these bozos are putting up reverse-capable autopatch facilities that can initiate a QSO from a telephone, USUALLY by unlicensed individuals (wives, children, etc)! The ARRL has been completly silent about the problem...just like mess on 10m!

(Are you reading this Mr. Sumner? How long are you going to ignore the situation? ..will they have to start speaking spanish in Newington schools before you wake up to what's happening??)

In connection with my collection of radio/phonetic/spelling alphabets (which you may have seen in alt.usage.english/ sci.lang) I have received the following:

1:

America Brazil Chile Denmark England Finland Greece
Hawaii Italy Japan Kilowatt London Mexico Norway Ocean
Pacific Quebec Radio Sweden Texas Uruguay Venezuela
Whisky Xray Yokohama Zulu

other options:
Amsterdam Baltimore Canada . . . Guatemala Honolulu India . Kentucky
Luxembourg . Nicaragua Ontario Portugal . Romania Santiago Tokyo . .
Washington . . Zanzibar

2:

America Boston Canada Denmark England France Germany Honolulu
India Japan Kilowatt London Mexico Norway Ontario or Ocean
Pacific Quebec Radio Santiago or Spain Tokyo United Victoria
Washington Xray Yokohama Zanzibar

Is there a preferred alphabet here or is the situation completely informal?

>_instructed_ to.

This has come up in other newsgroups, but I'll summarize them to here:
The reason they want the last 4 digits of your phone number is for a
(semi)unique ID for local customers. They don't daemon dial every
prefix and those suffixes for anything. If you don't want them knowing
the last 4 digits, make something up. 3141 (first 4 of Pi) work well,
or 2818 or the month/day of your birthday (i.e.1909 for 19 Sept... or is
that 0919? ;) and so forth. All they want is the same number every time.

>further, here in columbus ohio, i am yet to find a suitable retail place
>where i can just walk in and buy say, a phono jack. since i do not want
>to wait 4-7 days to get a single diode or an audio transformer, whether
>i like it or not, i have to shop at radioshack.

And that's why they charge more for all those little things. Have you ever
bought bread or milk at a 7-11? You pay a certain (fairly large) premium
for having something "right now, right here." Whether that premium is worth
it is up to the individual. Ain't captialism great?

Dots always go on the paddle worked by the thumb. Anything else
is very confusing.

Confusing to whom, though? If you are starting from scratch, with
either hand, I don't see that it matters which side you use for
which. If you are switching to left-handed paddling after doing
it right-handed for years, then yes, it is easier to do the dits
with the thumb if you used that before.

I don't even use the forefinger for the dashes, I dunno why not.
I used to, now I find that I am using the 3rd or 4th finger, but
I don't think anyone knows or cares.

I suppose it could be confusing if you are switching paddles
with someone else during Field Day or a contest, but you can
always turn the paddle 180 deg on the desk, or switch the
dot/dash sides in software (the CMOS keyer allows you to do
this, others probably do as well).

I believe the thumb=dits convention is left over from the days
when most people used bugs and felt they had more control over
the dashes using a finger rather than a thumb, but I may be
mistaken in this.

I know someone who plays violin/viola/cello holding the bow
in the "wrong" hand, and all the strings reversed left-right.
It still sounds like a violin etc., and there's nothing
confusing about it - it just looks wrong, and it would not
be an easy matter to switch violins with him in the middle of
a concert...

If the original poster has been used to sending dots with the
thumb and is now changing hands then I agree that it is easier
to keep the thumb=dits. It wasn't clear whether he is just
starting to use a paddle (and, incidentally, using his left
hand) or whether he is switching over.

I found that I could send OK left-handed, but couldn't write
with my right hand at the same time - old age or something.

I guess you can always look at your paddle in a mirror if
that helps - ack.

well, that depends on ... how often you switch hands, how often you operate somebody else's paddles, and how often someone else operates yours etc......

i am inclining towards dots on left, dashes on right, so that i can still play with the paddles in the stores etc., without changing the dot/dash paddle.

>with RG-8 (U or A), or should I use the RG-213?

As I recall, from memory, RG-213 is essentially the same as RG-8 with
respect to loss. I believe RG-213 is supposed to have a "non-contaminating"
jacket, which is to suggest that it is more weather resistant than regular
RG-8. Practically speaking, if you use PL-259/SO-239 "UHF" hardware, the
difference is moot. I'd suggest sticking with RG-8 for your purpose.

There are more exotic types of co-ax available, such as Belden 9913 and
Andrews Heliax, but regular old RG-8 should work fine for you.

Opinions, anyone?

1789. Co-ax Question...

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-07 22:02:16 UTC
From: sarmstro@vaxc.stevens-tech.edu
Message-ID: <1993Sep7.170216.1@vaxc.stevens-tech.edu>
Source record: 276857

I'm planning on buying a Diamond X-300A 2m/440 antenna, and
hooking it up to my HT, an Icom W2-A. (At least until I get another rig).
The main question that I have is about what kind of Co-ax to use. Should I go
with RG-8 (U or A), or should I use the RG-213? I'm going to be
running about 10-15 feet, mostly on the outside of the house. In the
near future, I also want to get an amplifier, if that has any bearing
on the Co-Ax use. This is the first antenna I'll be buying since I've
only had my license about 3 months, so I don't want to screw up...

Thanks in advance and 73's,

Scott

1790. Commercial Hy-Gain Antenna

Newsgroup: rec.radio.amateur.misc

Use RG-213 since most of the run (actually any) of your run will be outside. RG-213 is what is known as non-contaminating jacket and RG-8 type (there is no such thing as RG-8 - since that is a non-active number) is contaninating. RG-8 may start out with less loss; but within the year, will actually have a greater loss than RG-213. For a longer run, (25 feet up) use Belden 9913 and N (NOT UHF) connectors except where you go around a moving joint such as a rotator. Then use RG-213 as a jumper again using N connectors as the connection.

There's a possibility of a New Zealand-Pacific link up on Peace Sat over
the JOTA weekend. Organisation at the New Zealand end is OK, with a
Peace Sat terminal available for connection to our `National System', a
UHF amateur radio network covering most of New Zealand.
I'm looking for interested Guide/Scout groups around the Pacific to
coordinate locally with each other (and with local radio hams) and contact
their local Peace Sat terminals to check out the possiblity of such an
operation from their end.
A message has been sent to the terminal at Hawaii (still waiting on a reply)
but if anyone else is interested, please let me know!
Co

>And others had some similar concerns. Sounds like there is no such thing
>as the ideal repeater directory yet. Is there some sort of concensus about
>what would be in the ideal?

I think the most useful form would be like the World Radio TV Handbook.
They have a single page for each station with a map of the coverage
area of the station, ownership data, information about operating practices,
etc. The same sort of thing could be compiled for amateur machines, but
the coverage maps would require a lot of input since that's not something
that's ususally well documented for amateur repeaters.

A mapping project could be a good club project, however. Sort of like
fox hunting in reverse, find the fringes. As broadcasters know, this
type of data can be very useful for monitoring facilities quality, and
for planning facilities upgrades. I'd think most repeater groups would
want to cooperate.

>like FT-890 and ICOM. I have used all the KENWOOD models up to TS930 and
>I didn't like them at all. I doubt it I will even consider a KENWOOD
>unless someone convinces me that they have changed the design.

You don't say what you don't like about the Kenwood radios. Most of their
HF gear has quite acceptable performance. It may be that you find their
user interface a kludge as I do, but unlike their VHF/UHF designs, the
electrical and thermal performance of most Kenwood HF gear is really pretty
good, and quite popular. Would you care to outline your dislikes?

The only Icom HF rig I can wholeheartedly recommend is the IC-735.
That's one tough little radio with good thermal and electrical design.
I also like the user interface. It's the HF radio I currently use. The
new IC-737 may be good too, but I haven't played with one yet. The other
current Icom HF rigs either lack necessary features, or cost too much.
Older Icom HF rigs, like the 720 and 740 series, fall down in the receiver
department.

I haven't had a chance to use the Yaesu FT-1000, I've heard it's good,
but the older rigs like the FT-757 aren't really competition grade.

The Ten-Tec radios are a quandry. Some of them have quite good basic
receivers and transmitters, but seem to be designed for another era.
The company seems to be flailing around trying to find a market. The
units I've seen have had QC problems, and their latest offering seems
faintly ridiculous with it's plug in band modules.

> I also wonder if I need a built-in antenna tuner. I realize it is
>a good protection against poor SWR, but I don't think I will ever try to
>use my 2m HT antenna. Plus, I really like the MFJ's Versa tuner. Shall I
>invest my money in extra filters instead?

I wouldn't pay extra for a built in antenna tuner. If you've either got
antennas with acceptable SWR, or have an external tuner you're comfortable
with, then you don't need that extra expense. I may be old fashioned, but
I'd rather turn the knobs myself than have an automatic antenna tuner.
I use an old Dentron tuner. Extra narrow filters are almost always a good
investment. Be careful though, the filter options can be confusing with
high IF and low IF filters, different shape factors, etc. There are also
aftermarket filters for some rigs, like the Kenwoods and Yaesus, that
are sometimes better than the factory offerings.

> I also must make sure the power supply can handle 220 VAC since I
>will be leaving for Germany soon.

Most all of the switching supplies either automatically deal with this,
or have a voltage selector. Brute force supplies may or may not have
dual primary windings. Many of the physically smaller HF rigs are designed
to work off 13.8 volts DC. You supply the voltage either with a battery,
or with an external supply. Since 13.8 volts DC is a world standard thanks
to the automobile, you can find suitable power supplies anywhere for the
local line standard. If you go this way, it may be best to simply buy a
13.8 volt supply when you get to Germany. Saves on shipping too since
the brute force supplies tend to be very heavy.

Hispanics are now the largest minority group in the US, supplanting blacks. Get used to it. They aren't generally worse operators than Anglos. The language barrier can present problems, but most of them can speak English, if necessary, can you speak Spanish? Most of the coordination problems could be solved if some genuine goodwill existed between the communities. But that takes effort on *both* sides. If existing Anglo repeater operators won't tolerate Spanish on their machines, it's quite understandable that the Hispanics would want to start machines of their own. For better or worse, monolingualism is finally dying in the US. Get used to it.

>on the Co-Ax use. This is the first antenna I'll be buying since I've
>only had my license about 3 months, so I don't want to screw up...

The problem with RG8 is that it's no longer a military standard.
Therefore there are a lot of RG8 *style* cables on the market,
but their quality varies widely. RG213 is still a military standard,
and it's quality is more consistent. If you buy from a reputable
cable manufacturer, RG8 style cables can be as good, or better,
than RG213, while often costing less.

Even RG213 has substantial losses at UHF. There is a more recent
cable that does much better. It's Belden 9913, and it's Wireman
copy. This cable is stiffer, using a semi-airline construction.
Connectors must be attached with more care, because of the increased
possiblity of water incursion, PL259s work as is, though special
waterproofing precautions must be taken, and special type N or BNC
connectors are required due to the larger center conductor. 9913 uses
a center conductor of 9.5 gauge while RG8 and RG213 use a 10 gauge wire.
These connectors are now widely available from the sellers of the
cable and only cost a few cents more than connectors for RG8. I
prefer the Kings crimp connectors for reliability, but they require
a special tool to install. The Amphenol connectors work without
special tooling, but are a pain to install correctly. Make sure
the rubber seal faces the right way.

A good way to waterproof outdoor connections is to smear the connection
with silicone grease and then use a piece of heatshrink tubing over
the entire connection. Other methods, such as self vulcanizing tape,
can be used instead, but the grease and heatshrink method works fine.
I find the Coaxseal(tm) putty to be less than satisfactory. It's
difficult to get a perfect bond, and the stuff is really messy to
remove. Don't use vinegary smelling bathtub caulks and sealers. They
contain acetic acid which will corrode copper.

Since you'll be using a HT on the indoor end of the connection, you
have another problem. The 9913 is really stiff, and even RG8 isn't
very flexible. You won't be able to move the radio around with the

cable attached. The stress on the radio's BNC connector will cause
it to fail. So you'll need to leave the radio stationary and use
an external speaker mike. An alternative is to use a barrel connector
and a short whip of more flexible cable to the radio. RG8X, or Mini-
foam, cable will work. You will suffer losses due to this cable,
and to the extra connectors, but that may be tolerable in order to
be able to pick up the radio. This mechanical issue is not a minor
consideration. You should think carefully about how you're going
to arrange the radio, possible charger, and cable.

>>vastly superior hardware with a 16-bit sigma-delat A/D...KG7BK

>Please describe what you mean.

>Robert W. McGwier | n4hy@ccr-p.ida.org

8-bit A/Ds have a dynamic range of around 50db. 16-bit A/Ds have a dynamic
range of around 98 db. My personal opinion is that one needs around 70db
dynamic range for serious CW work. Delat is a typo. Sigma-delta A/Ds
push most of the quantization noise outside the range of human hearing.
I know nothing about Timewave's firmware, but their A/D hardware is
superior to 8-bit systems.

Consider a 5v broadcast heterodyne near a 50 mV CW signal. In an 8-bit
A/D system the 5v signal doesn't allow enough resolution in the 50 mV
desired signal while a 16-bit A/D system does. I have not tested any
commercially available DSP devices but I have given up on trying to
use an 8-bit A/D for 40M CW. This is only my personal opinion but I
believe that 8-bit offerings were obsolete when they were introduced.

The moral is, look before you leap... KG7BK

From time to time there is a channel on the IRC called #Scouting, join us there. If not, contact me (nickname: ruben), and I'll join it.
I have been planning for a JOTIRC quite some time, but it has only been on the planned stage yet.

\Ruben.

: ****** Field Day (2A): W5DDL #2 in 92, #1 in '93 ******

Hello!. Looking at your question, I've been suggested to respond
it, because I had just bought an ICOM's one; I mean, the W21AT HT. I
like it vs YAESU's FT470 (what I was looking for before) and KENWOOD's
TH78; it's a very recent product including almost all of the functions a
transceiver has built-in. Double-band, CTCSS, DTMF, 5 levels of TX power
from 0.15 to 5 watts, built-in mike on the battery-pack (for whisper
telephone-style operation), etc. .

After a few weeks of operation with it, I've concluded it's
the best option for me (at least); a person lent me a YAESU's FT470 just
before I saw ICOM's, and I had some kind of chance about probing it. The
470, however, is a very good HT too; I would have preferred it to TH78
if I hadn't discovered ICOM's last thing...

I hope these informations are satisfying your question. 73's de

1814. DSP filters as tone decoders ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-08 09:21:36 UTC
From: RHAREL@FAB8.INTel.COM
Message-ID: <9309080921.utk1103@FAB8.intel.com>
Source record: 276780

Anyone out there seen code written to allow
a DSP filter to be used as a tone decoder ?
i.e. - DTMF, CTCSS, PBX signals, etc ?
I would think since all of these tones are easily correlated,
it could be done.
An application I'm thinking of is to have the filter
open the speaker terminals ONLY when a specific
tone or series of tones are heard. Could be
interseting on CW as well.
Any comments/ideas ?

>believe that 8-bit offerings were obsolete when they were introduced.

Ahem, are you seriously saying that there are commercial receivers
on the market that exhibit more than 50 db of dynamic range on their
audio outputs? If we assume that 1 mw is the minimum signal needed
to drive the speaker to audibility, then to get 50 db of dynamic
range, the radio would need to output 100 watts. I've never seen
a ham receiver that did more than about 3 watts, and at 10% THD
at that. That's about 34 db, and well within the capabilities of
an 8 bit system.

AGC or MGC *must* be used to prevent overloading receivers, either
that or we build receivers suitable for a rock concert. That gain
control at IF will push your weak signal below the receiver noise
floor. I think you're expecting too much from audio DSP. It's not
a replacement for all selectivity inside the AGC loop.

In article <26igv6$jhh@charm.magnus.acs.ohio-state.edu> ksampath@magnus.acs.ohio-state.edu (Krishna S Sampath) writes:

based on net wisdom, i am learning to use my brand new kent
iambic paddle with my left hand (i am a rightie), and was just
wondering if i should reverse the dot and dash connections so
that the dot is on the thumb and dash on the forefinger. ie.,
as opposed to the standard righthand construction with right thumb
sending dots and the forefinger sending dashes.

are there any compelling reasons for having the dots on the left
paddle????

For What Its Worth department: I use a Vibroplex iambic paddle with
dots on the left and dashes on the right. I am right handed but operate
the paddle with my left hand.

When I set up my station I asked for the wisdom of the net and discovered
there wasn't much agreement as to the "proper" way to set up and use
an iambic paddle. One OF suggested that I ignore all the conflicting
advice and set it up the way that felt best to ME. I took his advice.

Paddle on left to keep right hand free for writing,
tuning, swatting at the kids, etc.

Dots on the left because I feel like my left index
finger has better coordination than my left thumb.

I've never had anyone complain about my setup...
I've never invited anyone in to operate it.

I've never had any trouble operating other stations
except for those with straight keys (never learned
how to use a straight key)

>
>The salesdroid said, "duh, no".
>

What makes this individual a "salesdroid"? It seems that if you ask stupid questions of people who have no input on what marketing techniques a company wants to use that you are the "droid". I can't believe that you would rationally expect to have an individual rip out coupons bound in a product and then hand you the remaining part of the product. You truly can't be that important a personage.

If you don't like the new marketing technique, write the company headquarters don't castigate the individuals who HAVE to carry out the policy. The key to most American thought is MONEY. Greed is the basis of all business and commerce. When you can convince the marketers that their current ploy won't lead to more money, they will come up with new techniques -- but not until then.

Personally, I don't mind this technique.

RYRYRY - GB2ATG - RYRYRYRYRY - BARTG - RYRYRYRYRY - GB2ATG - RYRYRY
This is the - British Amateur Radio Teledata Group - News Broadcast Service
for all Amateurs and Short Wave Listeners interested in RTTY and Amtor.

This news is broadcast during the first full week commencing Monday
each month, to the following schedule..

Evening transmissions at 1930 GMT. on 3.584 MHz. mark.
RTTY on Monday-AFSK, Wednesday-AFSK, Friday-FSK, and Saturday-AFSK.
Amtor/FEC on Tuesday and Thursday.
Morning transmission at 1000 GMT. on 7.041 MHz. mark.
RTTY on Sunday-AFSK.
Stated frequencies could be plus or minus for QRM.

An edited version of this bulletin is available on the Packet network as a
BARTG @ GBR. file thanks to Andy (G3ZYP) @ G7BBS.GBR.EU It is also posted on
the "INTERNET" system via the INFO-HAMS list on UCSD.EDU. thanks to Iain
(G6ARO) who is available on the "JANET" network as Iain @ UK.AC.HUMBER.

News for September 1993. Bulletin No. 009. (all times are GMT).

BARTG information.
BARTG's own rally takes place on Sunday 12th September, doors open at 10:30
BST. The venue is 10 minutes drive from the M25 junction 10 in the Sandown
Exhibition Centre, Esher, Surrey. where you will find all the latest in DATA
modes and computing. Bring and buy stall for bargain hunters or hard up
vendors. Have a drink at the bar or enjoy on site refreshments. If your wife
plays golf bring her clubs. Volunteer stewards and helpers would find it worth
while contacting the rally manager, Peter Nicol (G8VXY) telephone 021 453 2676.

A date to pencil in your diary, Saturday 13th November for the 1993 BARTG AGM.
To be held at the Green Wine Bar and Restaurant, Four Oaks, Sutton Coldfield.
Order called at 14:00 GMT. More details next month.

DX. Activity.

7 MHz.
HH2PK 0230, KI4MI 0300, ZL3GQ and EA6MQ 0500. UN5PR 2130.

14 MHz.

VP8CIL via G0EHR. XX9AS via KU9C. E31A via JH1AJT. HS0AC via W5VSZ. ZA/AA5TL
via K8JP. N7CR/T5 via WV7Y. JT1/JE7RJZ via JA7FWR. OD5PL via HB9CRV. 7Q7ZZ via
JA1UMN.

Contests.
The 2nd Japanese Amateur Radio Teletype Society (JARTS) RTTY Contest starts
0000 Saturday October 16 until 2400 Sunday 17. There are no rest periods so a
full 48 hours for all if you don't require sleep.
All 5 HF bands RTTY only.
Classes are:
A) Single operator all band.
B) Multi operator all band (single TX only).
C) Short Wave Listener.
Exchange message is RST plus operator age. (00 is acceptable for YL and XYL).
QSO points score: One (1) point for contact with own country. Two (2) points
for contacts outside own country. Three (3) points for contacts outside own
continent.
Multipliers: One (1) multiplier for each DXCC country regardless of band. Each
JA, VK, W and VE district count as separate countries.
Total score is total QSO points times countries worked.
Same rules apply for SWL.
Logs to arrive no later than December 1st 1993 to qualify. To:
JARTS Contest Manager, Hiroshi Aihara (JH1BIH), 1-29 Honcho 4,
Shiki Saitama 353, Japan.

Notes of Interest.
Mellish Reef (VK9M). This Island is due to be activated all bands all modes,
including RTTY from September 19 to 28 with two HF stations running
simultaneously.
Yemen (4W). Activity is expected from October 15 to 29 when a multi-national
team establish three HF stations to cover all bands and modes including RTTY.

Thanks this month to..
G3ZYP, DXNS, RSGB, VK2SG/RTDX, ARRL/ARLD, OPDX/BARF80.

Copy of the news as distributed by Bob G0ARF.

BARTG caters for all DATA interests with information-components-kits -ready
built units and software from experts. Members receive a 120 page quarterly
journal devoted to data modes. Beginners guides for most data modes are
available. The group sponsors HF and VHF RTTY contests, administers its own DX
and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted
via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast
may also be mailed to this address, as well as any queries regarding membership
or services offered by BARTG.

<stuff deleted>

Your beaurocratic deficiencies aside, either provide the customer with the service and products they desire, or discover on your bottom line the results of your corporate ineptitude.

I NEVER want to hear some loser business tell me why it CANNOT and WILL NOT do what I want/need done, I just take my business and money elsewhere. Your rules and regulations will only harm your business.

<stuff deleted>

Jon's salient point seems to be in defense of the free market system. For this I applaud him. I too believe strongly in the ability of the free market, unfettered by undue regulation, to meet the demand of the fair market place.

Jon is probably not a Radio Shack customer. That's okay. There are a lot of people that are not Radio Shack customers. The same goes for Sears, K-Mart.... even General Motors (The ONLY company on the _Fortune_ "1" list) doesn't have 100% of the market.

Each of those companies and thousands more are working hard to garner a little more of the market share. They all have their plans. Some plans work better than others. Some do not. In Jon's case, the Radio Shack plan fails.

The word "mass" in the term "mass marketing" is important. It indicates where the attention is focused. If enough people share Jon's feelings about Radio Shack then the company will recognize a shortcoming in its plan and take steps to correct it. If, however, Jon's opinions are held by a minority then it is unlikely that Radio Shack will invest much time or money to woo them. This is not so much a characteristic of Radio Shack in particular as it is of the free market system.

It may sound a little cynical, but the whole point of marketing ANYTHING is to turn a profit. In the case of the large marketing corporations,

it's to provide a good return on the shareholders investment. By and large, the shareholders don't care about the day to day operation as much as they care for market share and return on investment. Those are the things that the board of directors instruct the corporate officers to address.

Perhaps there is a business opportunity there in Jon's town. There may be enough folks like himself that could invest money to equip a store, hire a well educated staff and address the needs of the people that have not been met by the other retailers.

I wish them well.

> The above thoughts are not to be attributed to any other person, company,
> or organization. They are my personal opinions regarding life and how to
> get along with others. You are free to agree or dissagree with this
> message.

I like that.

While I appreciate your good intentions I am astonished that someone can see the world the way you lay it out. I work hard for my scheckles and I am very picky about where I spend 'em. You want my money? Then toe the line.

I was about to delete the previous paragraph but thought I'd add one clarification. Jon, they are not after YOUR money.... They are after the mass market's money. Your needs may be better met by some other company.

obRadio:
Radio Shack has recently taken a renewed interest in amateur radio. This is probably due to the success of the codeless technician license. I think it's a good thing and I hope that their line of equipment and supplies grows. Furthermore, I hope that they can find some way to clear certain non-RS informational materials for display in their stores. I think a very symbiotic relationship could be forged between the local RS stores and the local radio clubs.

well, that depends on ... how often you switch hands, how often you
operate somebody else's paddles, and how often someone else operates
yours etc......

i am inclining towards dots on left, dashes on right, so that i can
still play with the paddles in the stores etc., without changing the
dot/dash paddle.

krishna

I solve this problem by using my right hand!

The easiest way to switch hands is to have two cables, one wired
for right, the other for left, and then just switch plugs. Or
wire in a DPDT switch!

If you can send lefty with righty-wired paddles, more power to you.

>on the Co-Ax use. This is the first antenna I'll be buying since I've
>only had my license about 3 months, so I don't want to screw up...
>
I can appreciate doing it right the first time, and the feedline can be the performance limiting element an a given system. But let's look at the numbers:

Belden Cable frequency/MHz dB loss /100 ft.
8219 RG-58A/U 100 4.5
400 9.5
8259 RG-58A/U 100 4.9
400 11.5
8237 RG-8U 100 1.9
400 4.1
(funny, RG-215 is not in the Belden Master Catalog...)

10 to 15 ft run would have an attenuation of 1/10 of that specified above.

IMHO for 10 to 15 feet, unless you are doing DX work with weak signals, the smaller (read: more flexible, lighter and easier to use with an HT) RG-58 would be fine. If you plan to use 440 MHz and higher exclusively, then the cable will have more attenuating effect. I wouldn't use the larger coax unless the run was over 20 feet and is a semi-permanent installation.

Welcome to the club, I'm still waiting for my ticket :-(

Jon,

I did that even before I put the list on line. :-). I have seen some
really strange things as I look through the incoming messages to
the server. Most of them are caused by people who don't actually
read the HELP file. We finally had to modify the software to
accept command "aliases" so that the software just respond to the
wide variety of things people just assumed would work.

]> posting your notices about upcoming events / club info / Amateur radio
]> licensing requirements, etc.

]The Customer is ALWAYS right.
What nonsense. There are unreasonable, stupid and offensive customers.
Customers are humans also.

]> Let me try to throw some gentle reasoning into this thread:

]IF you think it's necessary...
From your response, it obviously is.

]> As a sales representative, I can not /
]> WILL NOT do anything not allowed by my manager. My store manager can not
]> / WILL NOT do anything not allowed by the district manager. The district
]> manager can not / WILL NOT...., etc.

]Your beaurocratic deficiencies aside, either provide the customer with the
]service and products they desire, or discover on your bottom line the results
]of your corporate ineptitude.

Radio Shack's bottom line is doing quite well, in spite of your spleen.
The business doesn't need to bend over and kiss the feet of every potential
customer. Some customers are not worth dealing with. Business is a two way
street - a sale must be in the best interests of BOTH the customer and
the vendor, or it shouldn't occur.

]I NEVER want to hear some loser business tell me why it CANNOT and WILL NOT
]do what I want/need done, I just take my business and money elsewhere. Your
]rules and regulations will only harm your business.

Fortunately, you are free to do so. Many of those who bitch and moan about
Radio Shack discover that Radio Shack serves a function that no one else
does in the neighborhood. I can go to almost any city in the world and
get useful things from radio shack. I have repaired a ham rig in Agana,
Guam from a radio shack. I have also done it in Paris, France. I'm a happy
customer, even though I know that radio shack isn't perfect!

]> Not everyone knows as much about electronics /
]> radio / computers as you or I do. You and I may not know as much about
]> electronics / radio / computers as someone else does. I know a few things

]> about radio that my manager doesn't. My Manager knows a few things about
]> computers that I don't. All of us in the store help each other: teaching
]> and demonstrating our strong areas; learning from their strong areas.

]So what's your point? Either you know enough to peddle your wares, or you
]don't.

I think he is responding to the complaints by people that radio shack salesmen
are often technically ignorant.

]While I appreciate your good intentions I am astonished that someone can
]see the world the way you lay it out. I work hard for my scheckles and I
]am very picky about where I spend 'em. You want my money? Then toe the
]line.

And I'm astonished that you would attack him in this way. The guy is
simply trying to let people know the REALITIES of Radio Shack retailing.

Disclaimer: I don't work for Radio Shack. I have never worked for Radio Shack.
I don't and have never owned their stock. I am simply a consumer who
appreciates what they provide.

]I too live in one of those "covenanted" neighborhoods. I "built" my
]house there, that is to say, I had my builder buy the empty lot of my
]choice (the developer gave me a map, I drove thru the area, I picked
]the lot, I told the builder which lot#), then had him build my house;
]I didn't buy a pre-existing house. After the house was finished we
]went to the closing. We signed our lives away. NOWHERE in that
]process did the developer EVER show us the covenants; in the "Deed"
]the covenants are not stated directly, but in fact direct you to
]another document filed at the County Courthouse.

]Because of this, I refute anyone who claims that "You agreed to the
]stipulations!" !

If you sign something without looking at all the attachments, you
are presumed to have agreed to them. I think it's pretty dumb to
not look at the covenants, even if it does take a trip to the courthouse.
Your problem is that you didn't ask, before you bought the LOT, what
the rules were. It is unfortunately that you didn't know about the
problem of deed restrictions, or you would have looked. Next time, you'll
know. Meanwhile, you are (legally) stuck.

I also live in a neighborhood with deed restrictions. Before I bought this
house, I searched for two years for a house that would meet my requirements
(view, nice neighborhood, ham antenna, my daughter's school district). There
was NO such house in Phoenix! I now have a tri-band beam at the absurdly
low elevation of 16 feet (it is hidden from the neighborhood by trees,
my house, and terrain features).

Such is life.

1827. Strange HAM interference

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-08 13:47:00 UTC
From: tskloss@zeus.tamu.edu
Message-ID: <8SEP199308474088@zeus.tamu.edu>
Source record: 276818

Here's the situation. A friend of mine was telling me the problem his mother was having with a HAM who was living a few doors down (nice neighborhood, in the northern hills of Austin Texas). It seems that this HAM transmits at very high levels; high enough in fact to INDUCT SOUND TO COME FROM A TELEPHONE THAT IS HUNG UP!!!!!

IMHO, it's due to the cord between the handset and the wall unit (it's a hang on the wall type with a long, ~3m unstretched cord to the handset) that is close to his transmitting wavelength (or an appropriate fraction thereof). The cord acts like an antenna, and the AM signal comes out of the telephone handset speaker. Plus, there is interference on all the other appliances such as her television and cordless phone. (we told her that he can indeed hear her conversations as well as his other neighbors' cordless phones)

She says it's spooky because when it's quiet she can hear mumbling coming from the hung-up phone and sometimes it is completly legible! What kind of affects can that intense field have on other, more sensitive objects (like us!)?

He [the HAM] is well aware of his interferences since all his neighbors have complained, but still he persists that he is doing nothing wrong. His antenna is a single vertical pole since antenna structures are prohibited in the neighborhood. I assume that he is just below the maximum allowed output, so the FCC can't touch him. It seems to be a battle between the disgruntled residents and the HAM who's personality is such that he once fired his pistol into the air repeated times to quiet the dogs next door (probably for a DX he was working on).

Perhaps he is upset that they won't allow him to install his 50 foot tower in his back yard and he is trying to get back at everyone as long as he can... The residents are trying for a legal injuction to either limit his power output, or halt his emmissions all together, but that has turned out to be a long battle.

Alas, what can we do about people who tarnish the image of amateur operators. It only takes one: we lost two repeaters (their prime location, actually) because someone (unknown if it was indeed a HAM) stepped on water drain line and leaked water down the side of the building (or something like that, minor indeed). Now, no amateur services are allowed on the building, which happens to be one of the tallest in the neighborhood.

--

From your description, it sounds like a microwave repeater, and probably
contains a host of other broadcast antennas, as well.

There have been studies done that have established limits on RF field
exposure, so in that respect at least, links have been 'shown.' But
remember, all such limits are usually subject to revision downward, as

time goes on. :-(

If nothing else, I personally wouldn't buy a house in that location because I *know* that it would cut down on the number of interested people when I was ready to sell it: Amateurs wouldn't like the proximity to the tower because of interference, and other mortals would question (like you) the safety.

1830. Re: Yagi for Cellular Phone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-08 14:38:54 UTC
From: glenne@sad.hp.com
Message-ID: <CD1I0u.EIF@srgenprp.sr.hp.com>
Source record: 276746

In case anyone is interested, I have a design for a 4.2 lambda (about 5' boom) yagi adapted from the NBS work which I originally built for my 904 digital radios. The first version, which followed the NBS literature exactly, was centered considerably below 904. This confirms what W1JR discovered about the NBS data. I built an identical pair of the things and measured their combined performance using a two port network analyzer. The result was that although they had a relatively narrowband match, below 2:1 only over 20 MHz or so, the gain of the system, including mismatch loss, was almost flat over about 100 MHz. This arrangement looked rather like a bandpass filter from 800 to 900 MHz. Individual antenna gain is in the area of 14 dBd.

I subsequently redesigned the antenna to shift the gain center up about 5 percent however, I still have the original dimensions around in case someone wants to build one. Construction is from standard Cu water pipe and 1/8" brazing rod. It should be under $5 is parts.

I don't know what the rules are about directional antennas with cell-tel but I should think they would be fine since they tend to minimize qrm to adjacent cells at the same time they maximize performance into the desired one. As I demonstrated in an ARRL CNC paper, if the entire cellular system were able to utilize directional arrays potential information capacity could be greatly increased.

Just because there is a process to allow semi-auto forwarding, there is NOT going to be an automatic influx of packet bbs's on HF. The same ones there are still going to be there, they will come and they will go, so let it be.

This is a pretty naive viewpoint. With the exception of a few limitted uses by STC, it's not currently legal to operate an automatic control station on 20 in the US. I don't know how you can say that there wouldn't be any additional ones that are added by the change in regulation. If there wouldn't be any added, then why do we need to add additional regulations?

The stations you hear now are either coming from outside the US (and these are already demostrating the problems) or are supposed to be under local/remote control.

I managed to lose the original post, but it was in re to whether it is safe to purchase a home near what appears to be a microwave tower. Despite what the news media and purveyors of microwave oven leak-testers would have you believe, there is NO epidemiologic or experimental evidence that rf or microwaves cause cancer, or any other disease for that matter, unless the subject literally is cooked. From a health concern standpoint, I would have no qualms about living there. I would be concerned about the effect on the property value, however.

Sorry, can't help here, although it sounds like a simple repair provided
you can get inside, which is my question. I tried to open mine up to get
to the antenna connection that has received so much talk, and also to check
out some other problems, but after I take out all the outside screws, and
the screws holding the battery connection plate on the bottom, and removing
the knobs on the top, the case still doesn't want to come off. It looks like
I can force it off by separating the two internal pc boards, but since I
can't see inside, I wasn't sure if I'd be ripping off some connection by
doing this. Is anyone familiar with getting this thing apart? Also, my
580 has begun resetting & erasing all memory about every 2-3 days, when it
is turned on. I seem to remember posts about other Alinco HT's doing this,
but can't remember if anyone figured out why. Any ideas?
Thanks Bill N3JLQ

Sure sounds like a poorly designed phone. Audio devices are not supposed to act like radio receivers. The FCC's Interference Handbook states:

Telephones, stereos, computers, electronic organs and hime intercom systems can receive interference from nearby radio transmittes. When this happens, the device improperly functions as a radio receiver. Proper shielding or filtering can eliminate such interference. The device receiving interference should be modified in your home while it is being affected by interference. This will enable the service technician to determine where the interfering signal is entering your device.

>IMHO, it's due to the cord between the handset and the wall unit (it's a hang >on the wall type with a long, ~3m unstretched cord to the handset) that >is close to his transmitting wavelength (or an appropriate fraction thereof). >The cord acts like an antenna, and the AM signal comes out of the telephone >handset speaker.

You are probably right -- wires pick up a lot more energy than boxes or components do.

>She says it's spooky because when it's quiet she can hear mumbling coming from >the hung-up phone and sometimes it is completly legible! What kind of affects >can that intense field have on other, more sensitive objects (like us!)?

Actually, the field is probably not all that intense, by RF standards. There is a BIOEFFECTS file on the ARRL Automated Electronic Mail Server, info@arrl.org. Interesting reading. There are several EMI files that outline the steps needed to resolve all sorts of interference problems, too.

>He [the HAM] is well aware of his interferences since all his neighbors have >complained, but still he persists that he is doing nothing wrong.

He is probably correct, however, the ARRL strongly encourages hams to maintain a friendly, cooperative relationship with their neighbors. If the interference is caused by a spurious emission from the transmitting station, the ham MUST cure the problem. On the other hand, the

consumer equipment may lack the necessary filtering and shielding to
reject a nearby radio signal. In that case, the ham can certainly
help the neighbor locate a solution, regardless of fault.

>the FCC can't touch him. It seems to be a battle between the disgruntled
>residents and the HAM who's personality is such that he once fired his pistol
>into the air repeated times to quiet the dogs next door (probably for a DX
>he was working on).

>Perhaps he is upset that they won't allow him to install his 50 foot tower
>in his back yard and he is trying to get back at everyone as long as he can...

These two issues are the REAL crux of the problem.

>The residents are trying for a legal injuction to either limit his power
>output, or halt his emmissions all together, but that has turned out to be
>a long battle.

And one the residents will probably lose. The ARRL has an information
package about federal pre-emption of local or state ordinaces about
interference. In essence, the FCC has clearly stated that the
regulation of EMI problems from federally licensed radio stations
is a federal matter under the jurisdiction of the FCC.

>Alas, what can we do about people who tarnish the image of amateur operators.

Not much, really. In my opinion, the attitude of the ham involved is
probably more harmful than the interference. Of course, only
one side of the story has been presented here. Most often, when
neighborhood situations get out of hand, the poor attitude and
non-cooperation has existed on both sides for a while.

Dana is correct about the attenuation and jacket construction of the RG-213 cable. The "non-contaminating" feature, though, has to do with exposure to UV radiation (sunlight!). The PVC material used inuRG-8 cables will, when exposed to sunlight, migrate through the shield and into the center dielectric, thereby increasing cable attenuation. I've been told, but don't personally know, that the "life" of the RG-8 cable family is 2-3 years when exposed to sunlight. (I'm sure others have anecdotal evidence to the contrary.)

I've never used anything other than RG-213 for the above reasons. At one time RG-8C/U was available, almost identical to RG-213.

The connectors have nothing to do with it. Although not preferable, most "stuff" is equipped with the UHF-type connector. Unless you're willing to change connectors, you're stuck with the PL-259. Use a liberal coating of silicon grease, followed by a layer of a good grade of rubber sealant, finished off with a piece of heatshrink tubing. Granted, the connector will be hard to reuse; however, the connector will be weather-tight.

Good luck with your project ... if you're new to ham radio, WELCOME !!

>the Hispanics would want to start machines of their own. For better or
>worse, monolingualism is finally dying in the US. Get used to it.
>Gary

we just had a bout of that locally here a year or so ago. only it was French. (here being the space coast of the us...boy, the wobblies sure could spend a lot of time arguing about the legalities of "foreign" language use on a US repeater (only the IDs need be english...i found it interesting to listen in and try to recall what i used to know about western european languages (besides english..8) ..)).

(how can you do an english ID in Morse code?..does this mean we all have to append a G/ before signing in CW? ..8-/...)

BTW I don't know if monolingualism is dying as much as American English is picking up new idioms and words. American English is the "Borg" of languages. They will be assimilated. Teaching Americans foreign languages will just speed up the process.

Right now, we've got a group of folks staying nearby (students at the local college) that something eastern european..i hear russian words but there's some other stuff mixed up in there too....didn't have time to take russian in college - too busy trying to fail the core classes...8).

{ followed by technical information }
========
Hmmmmm. From my talk with the company, it would appear to me that they *could* put in a cell, but just are not going to for the reason you describe - they don't perceive there to be a large enough market. At this point I don't know whether the alternate carrier is allocated, so the situation might not be as bleak as I'm making out.

One thing to consider is that "over the hill" in Telluride, there IS a cell by that company and in fact they are expanding coverage by putting in another cell site (unfortunately, that hill is 13,000' high so I don't think we can get into the cell over there, even though it's only 18 miles as opposed to the one 80 miles away in Grand Junction which seems to occasionally trigger my partner's phone). Now, Telluride doesn't have any more population than "my" town (Ouray), but has a LOT more money (incidentally, the other "Western Slope" towns in Colorado which
have service is Durango (fairly large) and Aspen (very rich)). I'm not sure
why GJ at 80 miles can trigger a signal, but it would appear to be a combination of it being about 4,000' and our town at 8,000' plus perhaps some reflection(s) off surrounding mountains. Plus maybe ducting effects (don't know how strong that would be at 800 Mhz).

I'm not saying they should be required to build a cell, but I'd like to see
some kind of time limit as to how long they can hold the license without doing so. Allow the possibility of someone else coming in and doing it. I've also heard that it's possible to put in a cell for $200K, but I'm

certainly no expert. I'm sure there are lots of variable factors. But I also feel that cells to some extent *are* philanthropic ventures just as tv stations are - they have exclusive use of a scarce resource (spectrum space) and thus should serve the public interest to some extent. As to whether I would put in a cell, if I had the know how and the resources to do so, yes I would. I believe in the town and having a cell would be a valuable community asset. There would of course be some minimum level of revenue coming in required to at least cover the amortization of the equipment and pay myself a reasonable wage as owner. And I'd think it would
be right that if I couldn't swing it I should give up the license to someone who might be able to do so.

Incidentally, thanks for the technical information. Very interesting!

Yeah, I've thought about trying to order a pizza - but they'd have to have a snowmobile to get to the place in the winter :-)

Seriously, once my partner and I got our cabin finished we started to get a
LOT of request from friends to use it for vacations (unforseen effect!). It's pretty remote and takes about 30 minutes in a four wheel drive vehicle
to get to it. We've been pretty nervous about that since if someone had a serious accident and couldn't drive they might well die there. Thus someone has to go up and check on people every few days to make sure they are all right. Of if they end up shooting themselves or getting attacked by a bear (or buried by an avalanche - which happens there - we "lost" a snowplow driver a year and a half ago in one) and need a life flight helicopter then they are out of luck. So even though *I'm* set with 2 meters,
there would definitely be a use for a cellular phone there.

Incidentally, looks like you are as much as an O.M. (O.F.? :-) as I am...

Eh? Cellular? Emergency? What happened to Amateur radio? I thought that's what our entire purpose and being was for? It's not the channel cops will arrest you now for calling a tow truck (or Pizza Delivery).

Besides, if it was truely an emergency you could always key the radio by the microphone cord in Morse Code and some intrepid Old Geezer(tm) will save the day.

Opps, I forgot, we have no-coders now. Nevermind, world's already gone to hell in a bucket. Might as well just pull the big switch. I hear that the no-coders have even been blamed for running phone patches to the missionaries now on the HF bands.

I do not see this as being a problem. If the cell base-station is
receiving an excessive signal from you as a result of your using a
gain antenna, the base-station will instruct your transmitter to ramp-down its
power accordingly.
A gain antenna can improve your battery-life under these circumstances!

But I would not advocate using a (directional) gain antenna in a mobile
situation; this *could* cause problems! (the 'hidden transmitter' effect).

And quite justifiably too. For years the repeater coordinating bodies in SOCAL (and most of the rest of the US as well) have been a xenophobic good old boys network. Despite the obvious changes in our country over the years, a lot of HAMs still seem to cling to the idea that Amateur Radio is a white male only sport. No blacks, women or mexicans. Of course, in Los Angeles, the "normal" assumption by most HAMs is that is an operator is speaking spanish, he(she) must obviously be unlicensed and illegally in this country. No wonder they want thier own repeaters. And no wonder they "assign" their own frequency pairs. How many times can you be told by TASMA, 220SMA or SCRRBA to "piss off" before you get the message?

> (Are you reading this Mr. Sumner? How long are you going to ignore the

> ..will they have to start speaking spanish in Newington schools before you
> wake up to what's happening??)

More xenophobic ravings

I suppose you believe it was the Indians own fault that they let the English speaking hoards over run their country.

Hmmph. I'd like a specific quotation of the section of the Rules, the law, or other official document which specifies that a copy is illegal, what the penalties for violation of that rule is, and who enforces it.

Or is this just another case of the VEC putting additional requirements onto the examination process?

You see, one of the local VECs has a reputation for trying to toughen things up - like administering the exams on a computer that doesn't let you go through and answer some of the questions and skip others, requiring the code test to differentiate between '16' and 'sixteen' in the "comprehension" part of the test, and the like.

Some may think this is a good thing. I think it's not very far removed from literacy tests for voters....

: These connectors are now widely available from the sellers of the
: cable and only cost a few cents more than connectors for RG8. I
: prefer the Kings crimp connectors for reliability, but they require
: a special tool to install. The Amphenol connectors work without
: special tooling, but are a pain to install correctly. Make sure
: the rubber seal faces the right way.

I'd like to agree with the advice Gary posted including the above
and other paragraphs on mechanical considerations. I would like to
make one small correction to the above paragraph that I think just
amplifies what Gary is saying there. JAN RG-213/U has an
inner conductor of 7 strands of 0.0296" diameter bare copper. That
works out to a _cross_section_ equivalent to 0.0783" diameter, which
is slightly smaller thatn 12 gauge, quite a bit smaller than the 10
gauge Gary mentions. Even the diameter of the smallest circle which
will encompass the 7 strands is a couple mils smaller than 11 gauge.

In an article, Warren, VE3WWG asks:

>A couple of local hams are looking for mailing addresses for

> Transco Products Inc., of Los Angeles, Calif.

>They want to inquire regarding some military spec coax switches
>that were manufactured by this company. They don't seem to be
>"listed" in the telephone book anymore.

>Anyone out there knows if they moved on, expired or what?

>Thanks in advance,

>Warren VE3WWG.
>(ncrcan.canada.ncr.ca!coutts!wwg@uunet.ca)

Transco has not been in Los Angeles proper for some time now, so I can understand the phone book not working. :-) They moved to Camarillo, California several years ago, but now have "merged facilities" with their parent company, Datron. Their new address and phone:

Datron/Transco
200 West Los Angeles Ave.
Simi Valley, CA 93065

Phone: 805-584-1717

This last move was only a couple of months ago. Both Simi Valley and Camarillo are a couple of hours north of L.A. Last time I saw the place where Transco was in L.A. (near Marina Del Rey) it had been leveled and turned into a three story office/retail building. See that, Address/Phone and trivia all together. :-)

This is fine if you're lucky enough to live someplace where there's
an alternative. In most towns in the US, when you want a resistor or
something, it's Radio Shack or nothing. I try to patronize our local
industrial distributor whenever I can (they're friendly to hams),
but sometimes I have to grimace and go to the Shack for something.
The help there has learned to ignore me as I make a beeline for the
electronic parts...

And I have complained to the company HQ about the inane new catalog
policy.

Source record: 276716

I have a friend who is a science writer and will be spending some of this (northern hemisphere) winter visiting some of the US Antarctic bases. I thought it would be fun to set up some skeds with the ham stations at the McMurdo and S. Pole stations while she is there. Does anyone know how to go about doing this? I suppose we could just wait until she is there and have the operators at those bases get a message to me via someone else, but if there is a way of doing this in advance, I'd be interested to hear about it. Anyone know someone who has been at one of these bases recently? Whenever I run into them on the air, they seem to be doing a lot of phone patches or asking for baseball scores, and are rarely in the "59 QRZ?" mode, so I don't imagine they are going to mind setting up something like this.

>
The problem with "don't give them your business" is that there are
very few stores around which carry the things they do (hobbiest parts)
that are within a few minutes of your house (i.e. don't have to "mail
order" the parts). When I'm going to "build something" that I
plan-out ahead of time, I order the stuff from Jameco or Digi-Key;
they are a whole bunch cheaper, have a wider selection, but take a
week or so to get the parts. When I need to "fix-up" something around
the house on a Saturday afternoon, and I need a widget that I know RS
has (even if it is at a 50% mark-up over "reasonable and customary") I
go there so that I can "be done with it".

Now, if there was another LARGE franchise (or even a single "hobbiest
parts store" in my area) that had the stuff RS had, then RS wouldn't
get my business anymore; just like Micky-D's doesn't get my business
anymore (I hated going thru their drive-thru for "fast" food, then get
asked to "park over there" until the something-we're-out-of gets
done; you should have seen the gal's face when I told her "NO!", and
parked in front of her window, holding-up the other 6 cars behind me!).

I think you would be in much greater danger of the antenna falling on you
than getting damaged by the RF radiation. For one thing, the dish antennas
direct the microwave energy in a fairly narrow beam, so very little of the
signal will appear at ground level.

: If nothing else, I personally wouldn't buy a house in that location
: because I *know* that it would cut down on the number of interested
: people when I was ready to sell it:

That would be my major concern. Many people don't like the looks of
a big radio tower. (Although we hams can't understand such a viewpoint!)
Also, many folks have been convinced that radio waves cause cancer,
despite the lack of evidence.

I wouldn't go that far, but for sure, the standard ICAO alphabet is
easier to copy through noise and interference. If you use the standard
alphabet, there are only 26 possibilities for each character received.
If you copy somehing like "---ember" you know it must be "November"
and not "September" "October" "December" "Remember" or whatever.

"ICAO" by the way, stands for "International Civil Aviation Organization."
The ICAO alphabet is used by airlines, the military, amateurs, and most
other organizations that require accurate voice communications.

Wow, something I can comment on...
We do some of this type of thing on the BJTs and FETs that make up our ICs. Mostly DC only, however we're doing some feasibility tests on getting AC parameters from measured S-parameters.
Few people know very much about this field. I can't claim to be one of them. It's mostly mumbo-jumbo as far as I can see. Much of it seems to involve tweeking a SPICE model, comparing it to measured curve traces, and iterating until they match. Often the final SPICE model will not even resemble the parameters as measured directly. I take this to mean that SPICE isn't necessarily a physical, "first priciples" model of what really happens inside a piece of silicon.
I'm trying to learn as much as I can about this, because it interests me, and could prove useful for radio circuits!

Operations at McMurdo (KC4USV) and South Pole (KC4AAA) during the
austral summer are mostly confined to phone patches and marsgrams (NAVY
MARS operations from both, even though S.Pole is ~100% civilian now).
Both stations operate on the same time zone as New Zealand, which is
about 17 hours ahead of the east coast depending on daylight savings,
etc. Personal operations at both stations would probably be limited
to 'after hours', which would put it rather late in the U.S. With
summer populations of about 1000 (McM) and 100 (Pole), and limited time
on the satellite phone links [data transmission and VIP calls have
priority], the ham shacks are usually quite busy with personal traffic,
propagation permitting.
The McMurdo ham shack is located about 1/2 mile 'out of town', and
for personal operation one needs to arrange with the Navy communications
people to get a key (and either a licensed ham or Navy radioman to
accompany you if you're not a ham). Things at Pole are more informal

since the comm techs are just down the hall and finding a control operator is much easier. [FCC jurisdiction is technically there, but at times you'd be hard pressed to tell....] Arranging a schedule in advance has a marginal chance for success at either place, depending upon the good will of those in charge on site. At best, one could probably hope for a first contact to be pre-arranged, at which point a more regular sked time could be passed after your friend had consulted with those on site. E.G., if your friend arrives and explains that she would like to set up a sked with someone stateside, and says that she has made pre-arrangements for a specific time, she might be allowed to make contact with you then just to pass info on a more permanent sked, even if that time conflicted with the regular ham shack operations. Another alternative would be to set up a list of alternate times for the first contact, which would have you listening most of one day/evening for the first call, and go from there. Or she can just make a phone call for the first chat.
As a word of warning: Anyone who is taking up a significant portion of the good propagation time during normal hours just for personal contacts is going to be quite irritating to the rest of the station if the phone patch waiting list is long (and it usually is).
However, if your friend misses the last plane, the scheduling will be much easier since once most of the summer scum leaves the crew size is an order of magnitude less and air time comes cheaply :-)

Anyway, hope there's some helpful stuff in all this rambling ragchew. I would be glad to answer more trivia directly.

Rest assured that it *can* be done - I did it a week or so after buying mine, but that was a few months ago so I can't be more specific about how I did it :-) It is also 11pm after a long day as I am typing so I would probably get it wrong now anyway.....

It still works OK, so I didn't break it!

1875. Is 8 DSP enough for HF CW ?

>an 8 bit system.
>

Ah, but the rub is noise to signal in *what* bandwidth. One usually measures the SNR of a SSB/CW receiver by measuring the audio power output (usually flat weighted) with a strong CW carrier with AGC off (MGC mode with fixed gain) and then measuring the noise power with the CW tone turned off. Sometimes (most often in measuring telephone line characteristics) this is done instead by notching out the tone (usually 1004 hz) with a very sharp and deep notch filter and measuring the resultant left over energy.

Both of these measurements are of energy over the whole 200-3000 communications audio bandwidth. And indeed few SSB receivers will do much better than 45-50 db or so measured this way. *But* and this is an important but, this is total energy over 200-3000 hz or so. But actual CW (A1) (Morris, which I hate) signals occupy something around 50 to 100 hz useful bandwidth for the carrier and sidebands at something around 400-800 hz depending on operator preference.

What this all means is what is relevant is the energy in the 100 hz (roughly the bandwidth of the ear when listening to CW) at around say 600 hz coming out of the receiver. If we assume flat white noise (equal amplitude per hertz) and a 2700 hz IF filter noise bandwidth, this is 100/2700 of the noise power measured in the full bandwidth. or 14.3 db less noise than the measured -50 db. But 60 and 120/180 hz hum and various other non white or non broadband noise components may make up a significant part of the noise energy in that -50 db, so the the actual white true noise energy SNR in a 100 hz CW bandwidth at the CW note frequency may be more like -60 or 65 or more db in some good receivers.

This implies that a DSP based CW audio filter looking at a weak barely detectable CW signal in the presence of strong interfering signals in the IF passband that are controlling the gain of the receiver could quite easily be looking for a signal at -60 or -65 db or so down from the audio output, since many people claim to be able to copy CW

with nearly 0 db SNR. Add to this some headroom to take the crest factor of speech into consideration (8-10 db) so that digital representation of the audio going into the DSP is not being clipped on voice peaks, and this implies that 70 or 75 db of dynamic range is needed to fish that weak CW signal at the noise floor of the receiver (that measures 50 db broadband SNR) out from a strong nearby voice signal which is controlling the receiver AGC.

In terms of bits of resolution this implies that 13 bit or 14 bit A/Ds and numeric precision in the DSP is required so that quantization and truncation noise does not exceed the narrow band (100 hz) noise floor of a good SSB receiver that measures less than 50 db of SNR on a AC RMS voltmeter attached to its output.

Granted that this is based on the limit case of digging a very weak CW signal out from SSB voice as received in a 2.7 khz bandwidth IF, but the resolution using flat 8 bit A/Ds is worse than this level by a considerable amount, further the level of the audio going into the 8 bit A/Ds may not be exactly optimized (thus loosing another bit or two).

Thus the experiance of those who have tried to use 8 bit A/Ds in DSP based filters for ham hf cw is quite consistant with theory.

1876. Re: DSP filters as tone decoders ?

>interseting on CW as well.
>Any comments/ideas ?

Analog Devices do a good book, based on the ADSP2100 series of chips which go into great detail on how to do a DTMF decoder. It is possible to improve on what they did (I know, cos I have done so) but it gives listings (in ADSP2101 assembly language) showing how it is done, plus a good explanantion of the maths behind it. I haven't got the book here so I can't give you the title, but I believe it is the one which is an amalgamation of various application notes.

Basically, for a discrete tone your best bet is a DFT (Discrete Fourier Transform) which can be achieved by means of a thing called a Goertzel Algorithm in an efficient manner (as described in the book). The narrower the bandwidth you require, the longer the algorithm takes. As an idea, my DTMF decoder program takes just over 25ms to do the DFTs required (sampling at 8kHz).

I don't see any reason why they wouldn't sell you a ham transceiver. There's no law against owning one (as they state, you only need an FCC Amateur Radio license to _transmit_ with it), and you could certainly be buying one for a gift for a licensed friend or relative. I think if you act cool and polite about it, and don't ask weird questions ("Can I talk to Europe on this?" "Will this get Channel 19?" etc), you probably won't get more than a brief comment that you need a license, and such. And probably not even that, from many RS sales people (who NEED that sale!).

Anyhow, nobody will be breaking any law if you buy one. And you'll be kewl as long as you wait till you get that ticket to push the talk button. (But...will you be able to resist the temptation to "kerchunk" a repeater "just once, for a second" with that PTT button staring you in the face for several weeks? 8-) Might be safer to buy it and stash it with a ham friend, and borrow a VHF scanner for now!)

Rasti,

From what I hear in Connecticut (with a horizontal wire loop--no beam),
European hams are most audible on the bands from 14 MHz and up (if 10 and 15
meters are open) between local dawn and noon here. That's when there's a
sunlit path between eastern North America and Europe. I rarely hear the
Continent on 80 (must be my antenna's high angle), and sometimes there are a
few stations coming in on 40 meters, but you'd have to try 40 and 80 after
twilight, anyway. I imagine your best shot from the US West Coast to Europe
would be around daybreak in California. And you'll probably do best on the
highest bands open--which also means less antenna to tote around!

GL and have a FB trip, OM!

David,

It's a proud accomplishment, but not a record. Many hams have walked into
an exam session completely unlicensed and emerged with an Extra Class CSCE
(not a lot, but enough that it doesn't bring out reporters!). Yep, it's weird
to have a friend go from No Call Sign to "x1xx" _instantly_ when that
envelope arrives from Gettysburg!

Still, a fine achievement...congrats to your pal!

1882. Re: alinco dj-580 repair

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-08 23:04:54 UTC
From: greg@core.rose.hp.com
Message-ID: <CD25G6.K3t@icon.rose.hp.com>
Source record: 276741

OK, since I just went through this broken antenna thing recently, let me jot down a few of the highlights...

First thing is to remove the wrist strap and all the knobs from the top of the radio. The knobs just pull straight off.

Around the knob shafts is a nut of sorts, more like a sleve with threads. They sit down in the gap between the shaft and the radio shell, and have two notches, 180 degrees apart. They probably want you to use some sort of special tool to unscrew them, but I just used a really small screw driver (basically anything small and pointy will do). This is probably the part you missed. Use the screw driver to push the notches around the shaft to unscrew the nut.

Un-do the 4 screws that hold the base plate on. Be careful with the wires and the spring that pushes on the battery release. Also un-do the 3 screws that hold the front and back halves of the radio together. The radio can now come apart, although it won't want to.

The ribbon cable joining the two halves of the radio has enough stretch to just barely allow the radio to be taken apart. The thing you're trying to do is get the knob shafts out of their holes. Once that is done you can lay the radio open on the table.

Of course, you're looking at two PC boards, one in each half. The BNC connector isn't on either of them :-(. It's burried below the one on the back side of the radio. There are 4 screws holding that one down, one in roughly each corner. Remove them, and carefully lift that board. Under it is yet another PC board, and under that one is the BNC connector. Alinco must have stock in the folks producing "Dr. Who".

At the top of the radio is a rubber gasket thingy which goes around the plugs for the mic/earphone/etc. I don't remember exactly how this went, but it will end up coming out.

With the second board lifted out of the way, you'll see some copper foil covering where the BNC connector is. There is a screw on the top right, and a solder blob at the bottom. Remove the screw and peel the foil back. I ended up breaking the solder blob in the process, but it was easy to put back. The under side of the foil has an adhesive on it.

There is a wire connecting the BNC's threads which broke off at the PC board *and* the center connection had cracked from the solder post. Use a really small soldering iron and touch up both connections. Be real careful not to burn anything, drop solder on anything, or bend the little coils near the center connector's post. I didn't use any extra solder, just re-flowing what already was there.

With the repair complete, reverse the process to put things back together. Don't forget to re-blob the foil, and get all the rubber gizmos (PTT/Function switch, and the seal around the speaker/mic connectors back in place, and not pinched under something else.

As a final step, get some good epoxy and run a bead around the BNC connector to keep it from moving in the future. Come to think of it, you might want to put some on the inside while the radio's open, but I put it on the outside. Seemed safer.

I've probably forgotten some minor, but important detail in all this, but this is from memory, so use your best judgment. Don't force anything; they put it together without a hammer, so you shouldn't need one to take it apart. You will need a real fine Phillips screwdriver, fine tip soldering iron, and NO INTERRUPTIONS to pull this off.

Good luck,

Greg KD6KGW

Roger,

People mail in prospective Strays to me at QST about that sorta stuff all the time. If I used 'em all, the Strays would all be a string of tales of guys getting Extra Class tickets in one 90-minute session, passing the Extra Class test and then going out and getting a General Radiotelephone ticket that same day, etc. It sure is a heck of an accomplishment (and for some, a lifetime dream that's never fulfilled), but I wouldn't call it exceedingly rare. Just quite uncommon. (BTW, I think a whole BUNCH of ex-military dewds used to pull that kinda stuff off in the late 1940s through the '60s when any military radioman knew Morse code and electronics theory inside-out.)

1890. Personal Satellite Reception

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 01:23:54 UTC
From: MIWHC@CUNYVM.BITNET
Message-ID: <93251.212354MIWHC@CUNYVM.BITNET>
Source record: 276775
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.space

I am writing an article for the Wall Street Journal about the coming age of Personal Remote Sensing, like hooking up a shortwave receiver to a desktop PC and doing image analysis and that kind of stuff on direct satellite download, like from the Russian Meteor Satellites and using microwave reception for GOES.

Ideally I would like to speak with folks who have found certain areas of research that do better with live download than 'canned' Landsat images for instance.

Also, I would like to speak with people who are using inexpensive satellite reception and analysis in their businesses. Like a farmer who does agricultural analysis of his land, or that fisherman in Florida who does daily analysis as to where the fish will likely be. Weather forecasting is also good.

If you e-mail me, please include your phone number so that I can speak with you and get things moving. Feel free to call me, I'm usually around.

>
> 73 es cul
> krishna, kb8fav/aa

I'm no expert, but I do use an iabmic key (Brown Bros. and Heath uMatic).
The technique that I use is to squeeze the key to produce some characters
or parts of characters. If you hold both paddles down simultaneously, the
keyer will alternate between dots and dashes. Whichever key is pressed
first will determine the order.
To send a 'c' for instance, press the dash key first as you squeeze the
paddles together, then release as the character completes. To send a
'q', hold the dash paddle down, after the second dash is nearly done,
touch the dot paddle and release it while continuing to hold the dash
paddle, when the character completes, release the dash paddle.

I hope this helps.....Steve..AI7W

1893. Re: Strange HAM interference

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 03:20:19 UTC
From: pazar@sr.hp.com
Message-ID: <CD2H9v.Fyx@srgenprp.sr.hp.com>
Source record: 276766

Sounds REAL familiar!!! In my previous house my next door neighbor caused the exact same symptoms. It is strange to hear voices coming out of a hung-up phone. In my case the neighbor was a CB'er running an FT-101E "tweeked" for 11 meters. My phone was the standard issue GTE phone. Installing a filter helped a bit...until he got a "footwarmer" for xmas! Argh... One neighbor finally had enough when he tried to put up a 50' tower. The FCC and building department resolved the issue rather swiftly.

I'd like to hear more details about your ham neighbor. Is he really a ham? Few run AM, and thats the only way you'll get distinguishable audio out of your phone. Hope things get resolved...

Source record: 276770

In article <1993Sep7.172328.17993@kocrsv01.delcoelect.com> c2xjcb@kocrsv01.delcoelect.com (James Bach) writes:
>
>The RTTY, Pactor, etc folks are restricted to using the same bandwidth
>as the "voice" channel in that band; which for HF purposes implies 2.4
>KHz, not 30KHz.

Not at HF. The rules specify the baudrate and the shift. That's related to bandwidth through the following relation;

Bn=B+2DK

Where Bn is the bandwidth, B is the baudrate, D is 1/2 the frequency shift, and K is a constant (1.2). A maximum shift of 1,000 Hz is legal, and 100 WPM (75 baud) RTTY is legal, so the maximum RTTY bandwidth would be 1.3 kHz. But the customary shifts for RTTY and packet are smaller.

So 45.5 baud RTTY with a 170 Hz shift should occupy

45.5+2*85*1.2=249.5 Hz.

300 baud packet with 200 Hz shift would similarly occupy

300+2*100*1.2=540 Hz.

Neither approaches a voice bandwidth.

1896. How to get around antenna covenants (or piss off the neighbors)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 05:41:34 UTC
From: mwgordon@nyx.cs.du.edu
Message-ID: <1993Sep9.054134.29384@mnemosyne.cs.du.edu>
Source record: 276768

Now, this might not work, but it's a good one to try:

Plant 100 bird feeders / lawn ornaments / stupid_little_wooden_sunflowers (tm) on the front lawn. When the neighbors come screaming about it, play "Let's Make a Deal". Gee, one little ham antenna isn't as ugly as 100 stupid_little_wooden_sunflowers (tm), now is it?

Usual variations apply, such as painting the house florescent orange, putting in a few 1000 watt flood lights on motion detectors (to keep the neighborhood safe :)), parking 20 cars in front of the house all the time, etc.

oh, by the way, make sure to get any resolution in writing!

Mike Gordon N9LOI mwgordon@uwwvax.uww.edu

>Because of this, I refute anyone who claims that "You agreed to the
>stipulations!" !

Sorry, ignorance is no excuse under the law. During the title search,
your attorney was supposed to uncover any covenants and bring them
to your attention. If he failed to do that, then he may have failed
in his fiduciary responsibility to you, and you can sue him. But he
was acting as *your* agent and that makes you responsible. You signed
without finding out all the necessary information, even though you
state the deed directed you to the proper document. That's your fault
for agreeing to conditions you hadn't seen. Never sign a legal document
unless all the codicils are attached and understood.

> >
> >The salesdroid said, "duh, no".

I gotta tell ya that I went in to the "Trash Shack" today. I was
there to get something better than the a pair of K-Mart 100mW 49
Mhz Walkies for my son's birthday. I was looking at the 2 or 3
Watt boxes but was a tad worried about spending $50 or $60 for CB
"Kiddie Walkies". I asked the sales guy if anything was going on
sale soon. After checking through his computer, his answer was
no. But he did say that he could sell me the $60 for $40. Bought
a pair of those. Haven't bought a CB since the FCC yanked my CB
license back in '74. Twere a memorable day...

BTW, I tried to buy the catalog also. But he pulled out the top
coupon and didn't charge me for it. Hard to slam the Shack today.

1899. HAM-server index file

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 07:35:10 UTC
From: HAMSinfo@GRAFex.Cupertino.CA.US
Message-ID: <gate.BLeL0B1w165w@GRAFex.Cupertino.CA.US>
Source record: 276615
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Executed: Thu Sep 09 00:35:07 1993

HAM-server@GRAFex.Cupertino.CA.US

Index of files.

NOTES: ----------

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.Cupertino.CA.US. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have
spelled the filename correctly. If you have ordered the file correctly,
then order a new INDEX, as I may have moved the file to a different
directory. The system is still expanding, and I am trying to keep it in
managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it
might be because your return path is incorrect. My bounce mailbox fills up
quite regularly with bounce messages. And, since the path is incorrect, I
cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are
ignored. If you are reading this from usenet, do not respond to this post.
You must send email.

A new INDEX is automatically generated weekly and when files are moved or
added.

/hamradio/newfiles/ contains files that have not yet been categorized. You
can order a list of newfiles by sending the following in an email.

NEWFILES <date>

<date> is in the form of MM-DD-YY, and is required.

The archives may contain the same file under different names. If you should
run across one of these, please let me know with email to
KA6ETB@GRAFex.Cupertino.CA.US

: go?...Gene (KD3LT)

You are completely free to go, if you wish. No-one has any right to force you to go, or not go. No government regulations control Morris dancing.

Be warned, however, that some of the dancers may encourage you to join in. Some people have found that despite long and dedicated practice they still cannot reach the usual speeds of handkerchief manipulation needed to get an invitation to more advanced use of apparatus like a May-pole.

Be sure that it is *REAL* Morris dancing. Check for an authentic village green with pub nearby. Check the temperature of the beer. If you can, wear a school cricket sweater or rugby shirt, arrive in an unrestored but pristine British Morris "Minor" car - The timbered "Traveller" version will earn you great kudos.

There is no need to even watch the dancing, or even notice the sound of the tinkling bells, just obey tradition and drink the beer. Modern law will require you to get a bus home, come back the next day to collect the "Moggy minor".

Never admit on this net that you've supported Morris dancing.

Hope this guides you in the finer etiquette

Gary's answer to you here and my private email note have addressed the issue of available dynamic range in most HF receivers AUDIO (not front end or IF circuits) as being well less than 98 and more like 45-50 dB. I will agree with you that there is a noise like quality induced on the output signal caused by the lack of smoothness in the output from the D/A at 8 bits of quantization. You have correctly called this quantization noise in your private note to me. However, by any measure you care to impose, the ALGORITHM will perform just as well with 8 bits as 16 since there is not 16 bits of dynamic range available to be processed. It MIGHT sound worse to your ear which I guess is the only point you were trying to make: for CW you don't like quantization noise.

There is an ap note available from Motorola on doing DTMF with the DSP56001.
This is complete with source code, etc. The DSP AP notes from Motorola and
TI are really quite wonderful. I am not familiar with those from Analog
Devices on their DSP as I have not programmed one.

The most accurate answer possible is that nobody knows whether or not there is any link between radio signals and any health problems.

Serious effort has been spent on looking for any link, but none has been found.

The power output from a communications installation is quite trivial to that from a radar system. Some radars put out beams that can cook meat a few metres from the antenna (accidents with people have been reported, and the damage was consistant with heating)
At the power level of a comms link, it would be a bad idea to stick your head where a beam emerges from a dish, there will be some heating and eyes are believed to be delicate.

I think you are in no danger from electromagnetic signals, but falling ice, spanners, antennae are a different matter.

A neighbouring village to where I grew up was close to a major TV broadcast mast, over double the height you mentioned. It iced up badly one winter, shedding truck sized pieces of ice which were blown far further than the expected falling body danger area. The mast eventually failed. Parts of it, and sections of ice came very close to cottages. I don't recall anyone being injured, but everyone being very frightened.

Ok, california doesn't suffer from our sort of weather, but has its own risks instead (Earthquake?)

I think your real risks are mechanical and financial, not electromagnetic in nature, and that your own assessments of them should be sufficient without specialist electromagnetic knowledge.

I personally would avoid such a place because of the difficulty of using sensitive receivers close to continuously operating transmitters !

The exposure from such a site should be far less at ground level than using a handheld radio eg cordless or cellular phone, but try convincing people when you come to sell.

Hope this helps a bit,

David

1905. WANTED: mods on ICOM W21AT

I agree. In moments of idleness (ie when listening to a real waffle station and being bored :-) I have tried sending with my left hand, and also turning the paddle upside down to see what reversed sending would be like. It was not as difficult as I had thought - though obviously needs practice, just like the usual way did back then.

My conclusion is that there is no "natural" way for the paddles to go: The brain can adapt to dots left or right, thumb or forefinger, or any permutation of the above. So I would recommend following the arbitrary standard of dots on the left, just for ease of switching beween your keyer and most other people's.

The way I heard it, dots on the left was originally because the strong thumb was needed to push against the spring loaded mechanism which makes the dots on a bug. Could just be an urban legend.

What I would like to see is a standard for the wiring of keyer jacks. We all seem to agree that the body should be ground, but whether the tip or the ring is the dot paddle seems to be arbitrary!

As Shakespeare should have said: "Oh what a tangled web we weave, when first we practice to transceive".

pip pip!

ardai@wizard.atb.teradyne.com (Michael Ardai) writes:
:
: I recently picked up an old radio, and would like to fire it up. It
: uses a C301A detector, a CX301A first amp and a UX112A second amp.
: Does anyone know the filament and plate voltages and currents for
: these tubes? It has separate binding posts for Det B+ and Amp B+.
: (I assume the Det B+ feeds both 301As... Will trace the circuit to
: be sure.)
:
: Thanks.
:
: /mike
Filament supply 5vdc (6vdc if a series resistor is
used in the radio to feed the
filaments from a 3 cell lead
acid battery as they did alot.)
Detector B+ 45vdc
AmplifierB+ 90vdc - 135vdc (see below)

If you find a dead tube, here is a sub guide...

UX112A #12A #112A all have this TOP view base-pinout *

C301A,CX301A #01A 301A grid o o plate

each tube uses o.25 amp fil. fil- O O +fil

Actual Ratings plate bias load/plate gain note

301A 01A 90v 2.5 ma -4.5v 11k 8
135v 3.o ma -9 v 10k 8x 55mw out

112A 12A 90v 5 ma -4.5 5.4k 8.5 35mw
135v 6.2 ma -9 v 5.1k 8.5 130mw

as detector, they usually used 45v...unless it was a regenerating
detector...then they might use 90v
Check to see if it has a "C" (bias) supply requirement...it may/may not.

* some had a side pin, to bayonet-engage a special socket, but can plug in
to the 'ordinary' 4 pin sockets.

I hope ya hear somthing on it.

And finally.... (before this thread gets out of hand)

Actually Morris dancing is for the nambie pambies....

The real thing is 'Dwyle flunking' which involves drinking
prodigious amounts of Cider (well it should of course be real
Scrumpy with the dead rat still in it!) and more silly dances.

Dwyle flunking superseded Morris dancing due to the higher
throughput under adverse conditions......

:-)

You also have to remember that keyers operate differently. Take, for
example, the Curtis 'A' and 'B' modes. If you learn with 'A' mode (like
I did. :-) the first time you try to use a 'B' mode keyer is liable to make
you doubt your own sanity. :-)

Does anyone know if the Boxboro hamfest is going to take place this fall? I see it in the hamfest listings for Fall'94 but there is nothing listed for fall 1993.

Thanks and 73! -John, KC2JT

So, I write, (he said apologetically):

Tom transmitted his intentions even before he spoke.
"We've got to get out of here fast" he said hurriedly.
His eyes telegraphed the need; he was wired for action.
"I've got to go first" he said importantly. The group
amplified the request and got out of the way loudly.
In an electric voice the assassin resisted, saying in
a choked voice, "you can't go yet, you don't have the
power to leave". He attached the modified battery pack
to Tom's h/t, saying testily, "Try this". As Tom's
thumb pressed the PTT, he said with a shocked voice,
"You talked me into the current situation!". Finally,
"You've electrocuted me!" Tom charged with feeling.

Tom's life hung by a thread, and finally the thread
broke. "This is the end" his friends said lastly.

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>Ahem, are you seriously saying that there are commercial receivers
>on the market that exhibit more than 50 db of dynamic range on their
>audio outputs?...

Of course they do, just not into an 8-ohm speaker. Ahem, are you seriously saying that I should digitize the distorted audio signal that appears across my speaker terminals? I'm taking the CW audio out of my receiver, routing it to an active filter with an input impedence of megohms, and processing it with DSP techniques that allow my PC to display the characters. I'm not using a speaker at all.

Say the loudest signal is 5 volts. Do you think there might be a 500 mV signal lurking in there somewhere? How about 50 mV? Just because you can't hear it, don't assume it's not there. My DSP processor has copied AMTOR when I can't hear anything but noise.

>AGC or MGC *must* be used to prevent overloading receivers...

Of course, it's the AGC being controlled by the strong, unwanted signal that is part of the problem. If it weren't for that strong signal, the AGC would back off and let me copy the signal in which I am interested.

>That gain control at IF will push your weak signal below the
>receiver noise floor...

It certainly will for some signals. But the AGC is also acting to push the atmospheric noise level down, so, in a way, that strong, unwanted signal is doing us a favor by reducing the considerable QRN on 40 meters. Some signals exist above the noise level but can't be heard by our human ears because of the strong interfering signal.

>I think you're expecting too much from audio DSP...

>Gary Coffman KE4ZV

That reminds me of my college professor who told me one watt on 80 meters was too much ever to expect from a transistor... the year was 1958. I am working with a system that sends and receives uncompressed data at 28800 bits per second over ordinary telephone lines. I don't think it's too much to ask for that same system to notch out a super strong heterodyne, reduce the uncorrelated noise, notch out the correlated noise that's wider than a Morse Code dash and filter/peak/decode the CW signal of the ham with whom I want to communicate. Can you imagine giving out a 500 RST?

(I admit that anyone who would use state of the art DSP systems
to copy an obsolete means of communications must be slightly bonkers.)

> another document filed at the County Courthouse. . .

I'm not a real estate lawyer, and Indiana state law may differ from Maryland law, but here, at least, sellers are required to disclose all known defects of real property in writing. Certainly covenants, being restrictions, qualify as a defect that should be disclosed--at that point, the buyer can decide whether they can live with it. In Maryland, when I purchased my condo, I received the entire condo covenants/by-laws document the day I signed the sales contract. At that point, I had 3 business days to review the document. Had I chosen, I could have cancelled the sale at any point without penalty during that time, simply because I did not like one of the restrictions. I have no idea if this is a state or federal law, although state law seems most likely. Still, I would think the disclosure law (which I believe IS federal) is close enough that you ought to consult a real estate lawyer--how much would it cost to ask? (Yeah, ok, stupid question--but you get my point.)

You might also consider Stealth technology. Try putting a tri band vertical inside a fiberglas flag pole. In that way you can hide a decent antenna inside something that does comply with the covenants.

I try to stick with the preferred phonetics, but I occasionally encounter a situation where the other station has trouble with my call, confusing Oscar with Alpha. (Ok, I confess. I have an ever-so-slight touch of a hillbilly accent.) At that point, using America and Ontario clears up the problem. (An interesting aside is that most DX stations copy my call okay. It's the stateside stations that have problems.)

He won't. This is the guy who, about two years ago, started screaming at
somebody who posted an innocuous request for transmitter schematics -- all
because the poor guy didn't have his license (yet). Sorgatz scared off
several known prospective hams (who said so on the net) and got nominated
Lid of the Year for that little stunt. I never put him in my kill file
because I didn't hear much from him after that. Oh well.

>> ..will they have to start speaking spanish in Newington schools before you
>> wake up to what's happening??)

>More xenophobic ravings

>I suppose you believe it was the Indians own fault that they let the English
>speaking hoards over run their country.

I recently saw a bumper sticker that read: "Indians Had Bad Immigration Laws."
I got a grin out of that one, since I'm part Cherokee and look it.

We have a large influx of Hispanics in north Georgia, but no hams so far.
I don't know what the club here would do if QSOs in Spanish were to show
up on the local repeater, but I doubt people would mind too much. This is
the same club that had a black treasurer in the early '60s -- not bad for
rural Georgia, huh? If it got to be wall-to-wall Spanish, someone would
most likely coordinate them their own repeater.

That's really funny -- Georgia more tolerant than California. Y'all come! :-)

>Or is this just another case of the VEC putting additional requirements
>onto the examination process?

If one checks Page 4 of FCC Form 610 Instructions (Section II-B), you'll find that the FCC instructs the administering VEs to do the following:

1. Review Section I of the examinee's FCC Form 610. Have the examinee make any necessary corrections.

2. Review the examinee's identification documents. Satisfy yourself that the person to whom you administer the examination is the person applying on the FCC Form 610.

*** 3. If the examinee holds a valid amateur radio license, compare the
*** original document with the photocopy attached to the FCC Form 610.
*** Satisfy yourself that they are the same and that no alterations
*** have been made to either document.

As to obtaining a replacement license, the following procedures have been specified to us by the FCC. Their is no "Replacement License" box that can be checked on the 610 form. Instead, you must:

1. Lost License -- No address or other changes:

Write the FCC a letter indicating that your license was lost (explaining the circumstances) and that you wish to obtain a replacement. Include your full name, address, call sign and date-of-birth. Send to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245 (do not call them to request a replacement). You may fax the request to 717-337-1541.

Keep a copy of your letter for your records. FCC has told us that if you possess a copy of your letter to the FCC, it will serve as authority to operate until the replacement license arrives.

If you are upgrading soon, you can also request that the FCC send you
a Form 1010-B License Verification Letter which will also serve as
operating authority until the replacement license arrives.

The replacement license should come through in four to six weeks.
The Form 1010-B should arrive within two to three weeks, or sooner.
Fax requests save two to three days mailing time...

* Do not send the FCC a 610 form. *

2. Lost License -- Address or other changes have occurred:

Write the FCC a letter indicating that your license was lost (explaining
the circumstances) and that you wish to obtain a replacement. Include
a completed FCC Form 610. Send to FCC, 1270 Fairfield Rd, Gettysburg
PA 17325-7245 (do not call them to request a replacement).

Keep a copy of your letter for your records. FCC has told us that
if you possess a copy of your letter to the FCC, it will serve as
authority to operate until the replacement license arrives.

If you are upgrading soon, you can also request that the FCC send you
a Form 1010-B License Verification Letter which will also serve as
operating authority until the replacement license arrives.

* Be sure you have included a 610 form. *

Note: The FCC requires a copy (or the original) of an applicant's
current license (Form 660) to be attached to each upgrade application.
Upgrade applications may not be submitted to the FCC by a VEC until
a copy of the applicant's current license is attached.

For example:

If a person possess a Novice license, has a Technician upgrade
application pending at the FCC, and then upgrades to General class.
The VEC may not submit the General upgrade application to the FCC
until the Technician license is issued--after which the applicant
sends a copy to the VEC for attaching to the General class upgrade
application. The Technician license is the current license in
this example.

Indeed! One could not have hoped for a finer guide. So, who's Morris? And why are we dancing him? I was frankly expecting that the dances were going to be imitations of the "straight key tremors" and the "buggy/paddle twitches", but there is clearly more going on than that. It sounds more like the steps one does after one has grabbed the B plus. (Ooops, my chronological slip is showing)...Gene

>the vendor, or it shouldn't occur.

I'm not bashing Radium Shock here, I love the place. I get along _VERY_
nicely with all three of our local shacks, and most of the time I get
good products from them, the nicest thing is, if I don't get a good
product, or I simply decide I don't want/need the product after purchase
I can just go right back and they'll give me my money or exchange. I LOVE
that.

Thus, I agree with most of what you said. I didn't vent my spleen, I provided
a counterpoint. Calm down OM.

>]I NEVER want to hear some loser business tell me why it CANNOT and WILL NOT

>]don't.
>
>I think he is responding to the complaints by people that radio shack salesmen
>are often technically ignorant.

They are. Of course it's a good thing I don't expect them to be technicaly
competent. Anyone who does is deluding themselves. I know what I want, and
all I ask of them is to process the transaction and point me to the right
part of the store on occasion.

>]While I appreciate your good intentions I am astonished that someone can

Attack? Counterpoint. I suppose it's a semantic thing, but one mans fish
is another mans poisson. :)

>Disclaimer: I don't work for Radio Shack. I have never worked for Radio Shack.
>I don't and have never owned their stock. I am simply a consumer who
>appreciates what they provide.

I'm simply a consumer who shops for his best overall deal. I certainly don't
want to hear kvetching from a business though.

Are most hams illiterate, or are people just being silly when they
keep posting about Morris code? I'll bet there are hundreds of readers
of this group who now think the correct spelling (and pronunciation)
is Morris!

I was particularly impressed by the actions of the Los Angeles-based 220 band repeater coordinating committee in designating a channel which was in use by a voice repeater in Tijuana Mexico as a packet data channel in Southern California. Why? Well, it seems, they didn't attend the meeting so they weren't represented. Or so I was told.

I don't know where the notion that radio waves stop at national borders came from, but it seems well ingrained in those dunderheads.

Naw, it's just another newbie system operator. Happens all the
time when fidonet and other toy bbs systems attach to Usenet.

I'll issue cancels for the repostings in a few minutes. There were only
176 of them on file here as of a few minutes ago. If it's of any
comfort, they're spread across lots of newsgroups, not just the ham
radio ones.

The real name of the node is buscard.fidonet.org, according to the
message-IDs. A short, simple, polite note to the sysop might not be a
terrible idea.

And the correct spelling of dam..... well I try not to use that kind
of language.

And most hams are not illiterate. How else could we memorize the entire
FCC question pool? :^)

Lets take a pole [Sea their. I'm literate!].
Who hear things Morris is spelled Morris and who thinks its spelt Morse?
And whoo things Morse is spelled Morris and who thinks its spelled Morse?
It's so difficult to phrase this question.

How about this:
Who thinks that posters who use the term Morris Code are trying to
infuriate any netnews reader who might be infuriated?

I'm delighted to have been of help.

I know who Morris is, but as he is on this net, I'd better whisper and not use any asterisks or exclamation marks.

The currently used locator system was invented by a Mr Morris, who is a keen data-mode using radio amateur (and lover of good beer at the right temperature). He can do -- --- .-. ... . -.-. --- -.. . but doesn't do it very often. I enjoyed the "Morris is a cat" debate, but know this to be false. Morris HAS a cat - in fact he has a hell of a lot of cats as his wife runs a cattery for the local cats protection league - he recruits some of the local radio amateurs to help with the unloading of kitty litter as he buys several tons at a time.
I too think Morris dancers are a bit namby-pamby, but the pubs by the village greens often keep Theakston's Old Peculier, and one sometimes has to make sacrifices in a good cause....

Dwile Thwonking, as played around Leeds involved two players, well plied with Tetley bitter, stripped to the waist, standing in a barrel, trying to beat each other senseless with sticks of rhubarb. In view of their initial state of anaesthesia, to beat anyone more senseless than they started out is a true achievement of heroic proportion. It is much more fun to watch than morris dancing and definitely not at all effeminate, however, it is often spoiled for spectators by pieces of raw rhubarb landing in their beer.

Dwile thwonking, like Morris dancing, is quite properly entirely voluntary. The only government regulations relate to assault and grievious bodily harm, rather like rugby. Speed of blows is secondary to the amount of momentum, called amount ot "Thrutch" locally.

I certify this to be factual

Jo> thought of Usenet.) Anyway, if you're worried and can access the Sept.
Jo> 3, 1993 edition, please review the last few paragraphs.

The verbal copyright at the end of the audio version authorizes anyone to retransmit it in that form, in its entirety. As far as I know I am still the only one authorized to use exerps. The copyright does not apply to the Genie posting. Bill gives a third party, Dale Cary, the scripts and a copy of the audio. Dale then transcribes the sound bytes, rewrites and reformats everything for posting. It is modified and in a different format than the original.

The electronically published format is technically a double copyright by Dale Cary and General Electric that includes previously copyrighted materal by Newsline Inc. To be perfectly legal, I have to ask either Bill, Dale, or Larry, (Genie Radio sysop), for permission to repost it. I sent Bill a note yesterday.

... If it isn't borken, don't fix it.

1947. RACES Bulletin #290

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 16:52:57 UTC
From: enge@almaden.ibm.COM
Message-ID: <9309091653.AA23679@ucsd.edu>
Source record: 276662

Bid : $RACESBUL.290

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES
(KH6GBX @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832
(916)262-1600
Landline BBS open to all: (916) 262-1657
RACESBUL.290 DATE: September 6, 1993

SUBJECT: MGT: Who "activates" the RACES?

In some areas of the country volunteers call out their own
operators without having a "higher authority" to which they
report in order to be activated or mobilized.
In other areas of the country --- possibly with completely
different government agencies --- volunteers whether fire, search
and rescue or communications, report to a sponsoring agency
before responding to an event. There may be little opportunity
for Amateurs to self-activate if there is a government agency
assigned responsibility in that area.
In one such area, the following paraphrased extract came
from an unnamed but concerned official:
"As an official responsible for administering a RACES
program I am concerned over the procedure utilized in requesting
assistance to the situation in "Blank" county; where members of
our RACES unit were asked to assist by a request broadcast on
Amateur frequencies directly to potential volunteers . . . This
request should have been made to the person authorized by the
local disaster council with which such volunteers are registered.
Direct contact between one county and volunteers registered with
a separate county raises questions of liability, dual
registration, and procedural error."
This was in a state where there was a statutory designated
responsible government agency. It also involved out-of-county
mutual aid. It was not a critical emergency but one that had been
occurring for days when the call went out for help. It was not a
matter of "whose turf is it", but of responsibilities,
liabilities, and knowing what was going on in the jurisdiction.
Someone forgot the procedure when they asked for assistance
overthe repeater without going first to the RACES sponsoring
agency and requesting them to use their mobilization procedure.
Think about it!

>

I used to think this way, until I finally *had* an emergency, and
then I pulled up 911 on the autopatch, only to have someone
jam me. I then later switched to another repeater and got the
info to someone at a phone before the jammer found that freq
too. Good thing nobody got hurt during the delay.

This isn't to say that HAM isn't good for emergency comm - just
remember that it has it's limitations (just as Cell Phones
do!). We also have had particular problems here with people
bringing up 911 on the patch so frequently that the dispatchers
would put a block on our phone number! Cool, eh?

My solution: I bought a Cell Tel. Handy for making calls
I wouldn't dream of making over the patch (yes, I know it's
easy to monitor and follow cell calls!).

Given that more and more communities are going the covenant route and more and more of them are being more and more restrictive, saying not to buy in a community with covenant restricts a large area of where I want to live. Every society trades individual restrictions against the best interests of the community. However, many convenants are overly restrictive and seriously infringe upon the inalienable rights of the individual.

I support restrictions on gas tanks, hazard waste storage, and other health ana safety things. I think we should all oppose other people forcing through covenants that determine where you can put a fence, cut down a tree, what color your grass can be, whether you can put up an aerial. This has gone beyond the beyonds.

1952. Repeater maps -- make your own???

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 17:27:37 UTC
From: mas@porgy.jpl.nasa.gov
Message-ID: <MAS.93Sep9102737@porgy.jpl.nasa.gov>
Source record: 276599

Would it be possible to automate the process of generating repeater coverage maps? Let's assume that we have in digital form the lon-lat and elevation of a particular repeater antenna, it's power and antenna radiation characteristics, as well as the topography of the surrounding area. How difficult would it be to write a program that would calculate the approximate area of coverage?

I know that line of site calculations are quite easy, it's just a variation on ray tracing (although this might be a little more complex, depending on what form the topographic infomration is in).

But, how well does strict line of site correlate with actual coverage area. Apart from rare phenomenon like troposhperic ducting, is coverate area always a subset of the line of site area? It seems to me that the coverage area depends also on the power of the repeater transmitter and the repeater antenna characteristics as well as the power and antenna characteristics of the other radio. Even if the line of site approximation isn't exact, could it serve as a useful guide or starting point?

Ideally, I'd like to see maybe several "concentric" coverage areas for a given repeater, one for your typical 5w HT with stubby duck, one for a 25-50w mobile rig with a 5/8 wave and one for a 100+w base station with a nice high elevation vertical and/or yagi. Then, if you had something inbetween (ie: an HT with a 5/8 wave, you could interpolate). Perhaps also you could split the coverage into receive and transmit areas (ie: the area in which the given receiver could hear the repeater and the area that the given transmitter could be heard by the repeater).

It seems like the hard part of this problem is getting the raw repeater and topo data in digital form, rather than doing the actual calculations. Wouldn't this be a great service to have online on the Internet somewhere?

Any thoughts?

Macintosh Amateur Radio Software - September 1993
Version 1.03

PLEASE... I COULD USE YOUR HELP! Those of you that can tell me about ANY of these programs working with System 7 would be appreciated! I am going to be adding a System 7 compatability section to EACH description in future releases. If the application will execute properly under System 7, the System 7 anotation will be placed as the last line of the product description. More clarification on levels of System 7 compatibility in the future editions... but this is a start!

The information in this list was gleaned mostly from flyers supplied by the software vendors, or in some cases from reviews in amateur radio publications or the README files included with the archive. Some of the information has not been verified for a long time; please check with the vendors/authors for the latest product specs, pricing, etc.

NEW/CHANGES: This list contains info on updated for several applications: MorseTrainer US-1.0.3; IM/Mac 1.0b27o; NET/Mac 2.3.26 and more information on ftp'able sites carrying Amateur Radio software. Several new items were added at the last moment, more information to follow. Additional e-mail addresses for various authors. Nothing from anyone on the rumor that ZCo Corporation is out of business???

*** Collections ***
MacNet
Public-domain programs (currently on 12 disks) contributed by Macintosh packet users. Includes test preparation, contest logging, propagation prediction, satellite tracking, and amateur television. Send formatted 800K Macintosh disks with stamped, self-addressed disk mailer to John D. Seney, WD1V, 144 Pepperidge Dr., Manchester, NH 03103. Contributions of public-domain programs are encouraged.

Project Mac
Contest logging, antenna design, satellite tracking, clip art, etc.
Microsoft BASIC required for many of the programs. Most of this software is now available in the MacNet collection.
Send three formatted 800K Macintosh disks with stamped, self-addressed disk mailer to Stan Horzepa, WA1LOU, 75 Kreger Drive, Wolcott, CT 06716.
(Compuserve: 70645,247)

Amateur Radio Software for Macintosh
Extensive catalog including logging, Morse code, gray line, test preparation, satellite tracking, contesting, and packet radio programs.
ZCo Corporation, P.O. Box 3720, Nashua, NH 03061. NOTE: This company has

been rumored to be out of business!

Amateur Radio #1
Contains satellite tracking, Morse code, attenuator design, and Ohm's law calculator programs.
Kinetic Designs, P.O. Box 1646, Orange Park, FL 32067.

*** Test preparation ***
Ham Test Stacks
HyperCard stacks containing the entire question pool for each license class. Can be used for preparation or generating actual tests.
The current releases are: Novice v4.1(new questions eff. 7/1/93), Technician v4.0(new questions effective 7/1/93), General v2.4, Advanced v2.4, Extra v2.4
If you wish to receive these PUBLIC DOMAIN stacks, please send a SASE (self addressed STAMPED envelope - 2 ounces postage = .52) and 800K diskette to the author: Diana L. Carlson, 3 Spruce Street, Hudson, NH 03051. Diana will no longer send out the stacks unless the envelope has sufficient postage for return mail (in general, that means .52-.98, depending on size of envelope) and for those who send a standard business envelope, she takes no responsibility for the condition of the diskette through US mail.
Available via anonymous FTP from various sites, including uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of Novice and Technician stacks are available at uxc.cso.uiuc.edu (5/6/93) Author is available via Internet: dls@genrad.com
System 7 savy with HyperCard 2.1

MacHam
Test generators and study aids for the Technician, General, Advanced, and Extra class written elements. Includes the complete question pool for each license. Hypercard based.
Coyne Co., P.O. Box 2000-200, Mission Viejo, CA 92692.
System 7 with HyperCard 2.1

*** Morse code practice ***
N6MZV Morse Trainer
Lets you practice any combination of letters, numbers, and/or punctuation characters. Can send user-created text files.
RT Martin, N6MZV, 10382 Orange Avenue, Cupertino, CA 95014. Also available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Shareware.

Morse Tutor
Sends random groups of letters, numbers, and/or punctuation characters.
Available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Or send formatted 800K Macintosh disk with stamped, self-addressed return disk mailer to Jack Brindle, WA4FIB, 726-175th Street SW, Bothell, WA 98012; Compuserve: 73365,606.

Morse Mania
Designed for those already familiar with Morse code who want to improve their speed. Allows code practice at various speeds and audio pitches. Can generate random sequences or play the contents of user-created text files.
Freeware.

Available via anonymous FTP from whirlwind.stanford.edu (/pub). Contact Edward Plumer, KM6IQ, for more information; Internet: plumer@isl.stanford.edu.

MacMorse
Randomly sends chosen characters. Lets you create your own practice files.
David A. Kall, 700 Marine Parkway #314, New Port Richey, FL 34652.

MacMorse v1.3
MacMorse is designed to help you learn Morse code and improve your receiving speed. It has several ways that it can send letters and punctuation.
Shareware.
Doug Havenhill, Dynamics and Control, 7143 West Sunnyside Drive, Peoria, AZ 85345.

MacSamuel
Sends random words, random character groups, and user-created text files. Can also create simulated QSOs with randomly generated text and callsigns.
Avant Systems, P.O. Box 5437, Pittsburgh, PA 15206.

Zihua Morse
Designed to teach Morse code to beginners and to improve the accuracy and speed of advanced users. Responses can be typed into the computer; the program will calculate accuracy and timing statistics for each session. Optional speech synthesizer reads the characters out loud for an accuracy check.
Zihua, P.O. Box 51601, Pacific Grove, CA 93950.

Sparks-II(f)
More Code training program.
Available for anonymous ftp at rahul.net /pub/davidj/radio

Morse Master 1.0
The newest of the morse code training programs. MM calculates the real speed as follows: Real speed = Number of Words/end time - start time. And the lengh of word is generating randomly, so if you set even 5WPM, sometimes another value will appear. However you should believe the slidebutton's value. If you repeat many times, the average speed should be 5WPM (if not... anyway, believe the slidebutton's value).
Archive is available mac.archive.umich.edu, path: mac/util/organization/morsemaster1.0.sit.hqx
The author can be reached thru the following e-mail addresses: h79261a@kyu-cc.cc.kyushu-u.ac.jp. (Eiji AOL account is no longer valid - moved back to Japan after his studies.)

MorseTrainer US-1.0.3
MorseTrainer is a powerful tool for learning and training Morse code.
Features: Three different training modes: user text, random text, library text; Arbitrary signal pitch and timbre; Arbitrary speed and tempo; Multi-alphabet support; Random text generator; Text library editor; On-line alphabet; On-line manual; Help Balloons; And a lot more. FREEWARE!
This version uses TrueType fonts instead on bitmaps fonts so that the user

can distinguish 0(zero) from O(character). Furthermore speed and tempo can be given in either characters/minute or words/minute.
Archive is available mac.archive.umich.edu, path: mac/util/organization/
Author is available via internet: sund@tde.lth.se
System 7 savy

*** Packet and other digital modes ***
NET/Mac 3.2.26
Allows simultaneous TCP/IP, AX.25, and NET/ROM connections. Requires a TNC with KISS mode. Copyright, but free for noncommercial use.
Available via anonymous FTP from ftp.apple.com (/pub/ham-radio); and on the Digikron Systems, WB3FFV, and N8EMR dialup BBSs. Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Doug Thom, N6OYU, 1405 Graywood Drive, San Jose, CA 95129.
Adam van Gaalen, PA2AGA, (Internet: adam@IGG.TNO.NL) has been making the modifications to NET/Mac. This version (and others) is available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/pa2aga), mac.archive.umich.edu and sumex-aim.stanford.edu.
System 7

Domain-to-Hosts Converter 1.0r3
This application will create a hosts.net file from the domain.txt file that PC owners use with NOS. Created by Ken-NS1N is available on many TCP/IP packet switches in New England.program. Version 1.0r3 is the latest release.
System 7

IM/Mac 1.0b27o
Mailer program for use with the SMTP protocol. Alternative to the BM program that comes with NET/Mac. Written by Ivo van Ursel, ON1XK. Ivo is continuosly updating his mailer program. Check for the latest release in the directory before "blind" ftp'ing. (Latest release as of 5/26/93 is 1.0b27k)
Available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/pa2aga).
Author is available via internet: on1xk@igg.tno.nl <<-- new address for Ivo
System 7

SoftKiss 1.8
Control panel device that emulates a TNC running in KISS mode. For use with packet-radio modems such as the Baycom kit and PacketMac Modem. Version 1.8 July 9 1993 update since 1.6. KD6PAG found a bug in quoting recieved escape and end characters is sofktiss 1.6. The bug and the fix and patch are all correct, thanks for some great detective work. Lots of doc files and drawings included in this archive!
Available on the HAMNET forum of Compuserve, America Online and via anonymous FTP from akutaktak.andrew.cmu.edu (/aw0g).
System 7

Savant 1.0.1
A new packet terminal front-end by the author of Virtuoso. Savant has a split window interface, but it's also a multi-window, multi-connection interface and will work with almost any TNC, unlike MacRatt or HostMaster.
A demo version of the product is available at cpre1.ee.iastate.edu (pub/ke0ph) or via US Mail, send a SAS disk mailer and disk to KE0PH, 4140

Jay Avenue, Orange City, IA 51041.
System 7

MacRatt with FAX
Terminal program for use with AEA's PK-232 multimode controller. Supports packet, CW, RTTY, AMTOR, and facsimile. Includes cable.
Advanced Electronic Applications, P.O. Box C-2160, Lynnwood, WA 98036.

HostMaster
no info yet (hint, hint)

PacketTracker 1.05
PacketTracker ver 1.05 is a program that monitors packet activity and keeps track of what is going on. It draws a graphical map showing who is talking to who and displays statistics of all current stations and keeps a running tally of activity.
PacketTracker was written for both the casual packet user and the network manager or BBS operator. The casual packet user will be able to learn a great deal about what is happening in packet around him; which stations are generating the most data and what some of them are. he will be able to see graphically what stations he can hitdirectly and which ones he cannot.
For the network manager and BBS operator, PacketTracker provides extensive insight to the operation of the local network and problems such as excessive retries on a path. It also allows for extensive logging of channel utilization and other pertinate information.
NOTE: This application requires the Apple Serial Tool.
System 7

*** RTTY ***
MacTTY
Decodes Baudot or ASCII transmissions. Can also be used for packet radio and other digital modes (including landline data communications). Includes split screen, a 15,000-character type-ahead buffer, and canned messages.
Summit Concepts, Suite 102-190, 1840 41st Ave., Capitola, CA 95010.

WeFaxWorks
Weather facsimile terminal program for use with Kantronics TNCs.
Kantronics rfconcepts, 1202 E. 23rd Street, Lawrence, KS 66046.

*** Logging ***
Ham Radio Station Logbook
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help.
SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

FDLog!
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates.

System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

MacContest 3.5
Allows real-time or post-contest logging of a wide variety of contests.
Checks for dupes, figures scores instantly, and offers various printouts.
Interfaces to TNCs for CW and RTTY contests, to DX packet clusters, to
Kenwood transceivers, and to MacinTalk for easy post-contest entry.
Gerald Eberle, HB9CEY, P.O. Box 13, CH-4417 Ziefen, Switzerland.

LOGic
(Macintosh version scheduled.) Lets you define the rules determining dupes
(such as once per band or once per contest). Displays heading, distance, and
other information about the country being worked. Automatically enters
contact time; if interfaced directly to a radio, also enters the frequency,
band, and mode. Shows status toward earning amateur-radio awards.
User-definable database fields. Exchanges data with other programs.
Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

HF Logger 1.2
A real fine HyperCard logging program! (hey... thats all I got!)
N0QGQ

Simple Log .2b
This little utility is a handy way to create a logging file that you can
later import into any data base for analysis, etc. It also shows you that
just about anyone can use Think C and create something on the Mac! Let me
know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA
Author is John Seney - WD1V, e-mail address is jseney@aol.com. For a copy of
this program, mail a SASE disk mailer and 800K disk to: John D. Seney, WD1V,
144 Pepperidge Dr., Manchester, NH 03103
System 7

Marathon
Contesting/logging- Have seen references to (March 92 CQ magazine) and heard
good things about MARATHON by N 0 IOS. I believe a demo was available for $8.
Last address known is: Kevin Krueger, N0IOS, 1780 Ruth St., St.Paul, MN
551O9

*** Propagation, gray line, DX headings ***
DX Map
Displays a map of the world with the terminator. Gives location, prefixes,
zone numbers, distance, and heading for any country you select. Freeware.
Requires HyperCard 2.0.
Available via anonymous FTP from joker.optics.rochester.edu (in the
/ham/dxmap directory). Or send a formatted 800K Macintosh disk with a
stamped, self-addressed disk mailer to Len Saaf, NV2Z, 52 Raleigh Street,
Rochester, NY 14620 (Internet: saaf@joker.optics.rochester.edu).

SatTrak
Primarily a satellite tracking program, but also calculates beam headings,
Maidenhead grid locations, MUF plots, and band openings. Shareware.
Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or

send a formatted 800K or 14.MB Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

Sun Clock
Desk accessory. Displays a color map of the world, including the terminator. Indicates current time for any location.
MLT Software, Inc., P.O. Box 368, Portland, OR 97207.

DX Window
Draws a great-circle world map centered on your QTH, with day/night terminator indicated. Displays over 400 DX locations with prefixes and beam headings.
Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

Skycom 1.1
Enter solar flux and get propagation predictions to desired areas of the world.
Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

Skycom 1.5
Provides sunlight status at both ends of a path; MUF, F0F2, and FOT frequencies; S/N ratio of the link; and other information.
Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

DX Helper
Displays beam heading, distance, gray line, and propagation information. Generates great-circle maps. Identifies prefixes, zones, and oblasts. Includes code practice.
MacTrak Software, P.O. Box 1590, Port Orchard, WA 98336.

Mac MiniMUF
A greyline and propagation predictor based on the PC version of MiniMUF by K4CFV. It is available directly from him for the price of a formatted disk and SASE (disk mailer).
His address in callbook or: Bob Stamper K4CFV, 12510 Shadowrun Blvd., Riverview, FL 33569

Mac Shortwave
A program called Mac Shortwave that figures MUF and LUF.
BXA Research in Plano, Texas

*** Satellite tracking ***
SatTrak
Tracks one satellite across a world map as it moves, displays the instantaneous position of several satellites, or generates tables of all satellites visible from a certain location at a given time. Also calculates beam headings, Maidenhead grid locations, and MUFs. Shareware.
Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

MacSat 3.0
Tracks up to 21 satellites simultaneously, either in simulation or real-time mode. Text screen displays ground-track coordinates, range, mean anomaly, visibility (azimuth and elevation) and Doppler shift frequency information for all satellites being tracked. Graphical screen portrays the satellite ground tracks superimposed on a world map. Polar plot displays graphically the precise location of each visible satellite above the observer's horizon. Developed by the Geodetic Research Laboratory of the University of New Brunswick.
Available from Richard B. Langley, R.R. 12, Fredericton, N.B. E3B 6H7, Canada (Internet: lang@unb.ca). A demo version of MacSat may be ftp'ed from directory PUB.CANSPACE on unbmvs1.csd.unb.ca.
System 7

OrbiTrack
Calculates look angles to selected satellites, plots current satellite positions on a world map, and displays the visible passage of a satellite against background stars (either within the program itself or via a data file that can be read into the Voyager astronomy program).
BEK Developers, P.O. Box 47114, St. Petersburg, FL 33743. (Bill Bard, CompuServe: 75366,2557) (Note: This replaces BEK's previous MacSat program, which was not related to the program of the same name from UNB.)

QuikMac
Macintosh version of N4HY's QuikTrak program. Requires Microsoft BASIC.
AMSAT, P.O. Box 27, Washington, DC 20044.

Satellite Orbit Prediction Program
Macintosh conversion of W3IWI program. Requires Microsoft BASIC.
Send formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Earl Skelton, N3ES, 6311 29th Place NW, Washington, DC 20015. Or send self-addressed stamped envelope for source listing.

Satellite Pro
Uses world maps and tables to indicate rising and setting schedules, current locations, mutual visibility opportunities, and footprints. Includes Mercator, polar, and great-circle displays. Optional antenna control.
MacTrak Software, P.O. Box 1590, Port Orchard, WA 98366.

MacSPOC
Author is on AOL and can be reached as adamod@aol.com via the internet.

*** Antenna design ***
MacMiniNEC
Chris Smolinski, N3JLY, 40 South Lake Way, Reisterstown, MD 21136.

*** Radio control ***
ICOM Radio Control
Provides a Macintosh interface for controlling ICOM transceivers that use the CI-V remote-control system. Lets you quickly change frequencies and modes. Also does logging and duping. Requires a CI-V to RS-422 converter (schematic included with program).
KE6FG Software, 9763 Pali Avenue, Tujunga, CA 91042.

FreqValet
Provides frequencies and DX program info for shortwave radio listeners. The program databases update automatically at 15, 30, or 60 minute intervals, thus providing a continuous display of broadcasts on-the-air at any given time in a spreadsheet like format. Features include sorting of data, scanning, and on-screen changing of databases. The program will convert Tom Sundstrom's dBase shorwave broadcast listing to FreqValet format and will do the same for Shorwave Navigator users. Separate cards are provided for DX Programs, Ship to Shore, and Utility broadcasts. Computer control modules are available at extra cost for the Drake R8, Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.
DX Computing, 232 Squaw Creek Road, Willow Park, TX 76087. Telephone (817) 441-9188 or (817) 441-5555 (fax).
Author is available via internet: dxcomp@aol.com
System 7 with HyperCard 2.1

*** Misc ***
Macnet Roster HC Stack v356
This is a HyperCard stack that relates all of the hams known that use Macintosh computers. Contact WD1V for more info. John can be reached via internet as jseney@aol.com
System 7 with HyperCard 2.1

*** Ham radio BBSs ***
Digikron Systems BBS
Various ham-related applications, including logging, propagation, Morse code, and packet. (408) 253-1309.

MacScience BBS
Various ham-related applications, including antenna design, propagation, WEFAX, packet, and Morse code. (408) 866-4933.

N8EMR BBS
Various ham-related files, including packet, DXing, and contesting software; AMSAT bulletins; and several ham newsletters. (614) 895-2553. Also available via FTP on AMPRnet at 44.70.0.1.

WB3FFV BBS
Various ham-related software, including packet, contesting, and Morse code applications. (410) 661-2475, 661-2598, and 661-2648.

ChowdaNet BBS
(more info at a later date)

*** Online Services carrying Ham Radio software ***
America Online/PC-Link
Supports Macintosh, PC's DOS/Windows, PS/1, Apple //s. Ham Radio Club (keyword = ham radio) supports all computer types. Software for amateur radio, scanners, swl'ers and general electronics. For 10 FREE hours of trial time send your snail mail address to tstader@aol.com or call 1-800-827-6364 Ext. 6285. This site NOT ftb'able(yet). Internet e-mail.

CompuServe
Supports any communications software on most computers Ham Radio area (go

hamnet) supports all types of communications formats. Call 1-800-848-8199 for information. This site NOT ftb'able. Internet e-mail.

Delphi
(more info at a later date) Internet e-mail

GEnie
(more info at a later date) Internet e-mail

Prodigy
Has ham radio message areas, no downloadable software. Limited internet e-mail.

==========
Misc. Internet FTP sites for Amateur Radio Macintosh software

joker.optics.rochester.edu (/ham)

>: /// Ted Johansson, Dr.Tech. | eka.ekated@memo.ericsson.se ///

Well, I was hoping to learn a better technique, but this thread has been
around for a while with nobody commenting anything even this good.

Here's how I've done it for MESFETs operating at 5 GHz, when we had
the S-Params:

* First, convert the S-Params to Y params. This is a pretty
standard thing, and one reference for it is Gonzalez,
_Microwave_Transistor_Amplifier_Design_.

* The Y parameters give you a pretty good idea of what a simplified
FET transistor looks like. I.e., you can determine gm, Cgs,
Cds, Cgd, Rout. It ain't perfect by any means, but it seems
to work.

* "This excercise is left to the student," as my professors are fond
of saying. Seriously, it isn't that hard to figure out on your
own what the parameters map to; i.e. I think Re(Y21) maps to
gm, or something similar, Im (Y11) is probably Cgs, etc. If
there is enough interest I'll get my course notes and post
relevent details. I believe Motorola had some old transistor
application notes which talked about mapping BJT parameteters
to circuit parameters. It is not that hard to set up a mathcad
sheet to solve everything given the S-Params.

* My experience has been that these models are not very robust.
That is, don't trust them when you get very far from the frequency
at which you extracted the S-Parameters.

Thats all I know. I'll shut up now.

1956. Readership Report for the Radio-Related Usenet Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 18:10:39 UTC
From: pschleck@unomaha.edu
Message-ID: <1993Sep9.181039.4593@news.unomaha.edu>
Source record: 276672
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,rec.radio.info

The following is reprinted from news.lists, with only the radio-related newsgroups (and the first newsgroup for comparison) included.

>From: reid@decwrl.DEC.COM (Brian Reid)
>Newsgroups: news.lists
>Subject: USENET Readership report for Aug 93
>Date: 9 Sep 1993 02:10:22 GMT
>Organization: DEC Network Systems Laboratory
>Summary: data for all groups
>Keywords: arbitron, statistics, full

This is the full set of data from the USENET readership report for Aug 93.
Explanations of the figures are in a companion posting.

```
+-- Estimated total number of people who read the group, worldwide.
| +-- Actual number of readers in sampled population
| | +-- Propagation: how many sites receive this group at all
| | | +-- Recent traffic (messages per month)
| | | | +-- Recent traffic (kilobytes per month)
| | | | | +-- Crossposting percentage
| | | | | | +-- Cost ratio: $US/month/rdr
| | | | | | | +-- Share: % of newsrders
| | | | | | | | who read this group.

```

2299 2800 46 17% 70 141.1 50% 0.01 0.1% aus.radio

Several positive trends continue this month. Readership is growing in the newly-created rec.radio.amateur newsgroups, though relatively stable in established newsgroups. The two top newsgroups, rec.radio.amateur.misc and rec.radio.shortwave, are roughly tied. It is expected that the new rec.radio.amateur newsgroups will follow roughly the same growth patters as rec.radio.info, created last December. If these newsgroups still haven't reached your site, please ask your news administrator to create them (refer him/her to the new newsgroup announcements by Dave Lawrence in news.announce.newgroups or the messages to the new newsgroups piling up in "junk" :-). Especially point out to him/her that cost/per-reader/per-month is significantly down in all newsgroups.

Of the new rec.radio.amateur newsgroups, rec.radio.amateur.digital.misc has the highest readership, although all are within roughly the same order of magnitude. It is expected that the rmgroup of rec.radio.amateur.packet on September 21st, combined with the creation of the new HAM-DIGITAL listserv gateway (maintained by Brian Kantor), will cause most of the remaining readership of rec.radio.amateur.packet to move to the new group. There is an RFD tentatively scheduled for January 1994, to either reconsider the rec.radio.amateur.digital.tcp-ip vote, merge all digital interests into rec.radio.amateur.digital, or possibly even revert back to rec.radio.amateur.packet. Watch news.announce.newsgroups (or subscribe to the rec.radio.amateur Working Group mailing list at rra-wg-request@amdahl.com) for further developments.

Also note that alt.radio.scanner is the fifth-largest radio newsgroup, being carried at an unusually high percentage of sites for an alt group. A vote to convert this newsgroup to rec.radio.scanner has succeeded. Check with your news administrator if this new newsgroup hasn't yet appeared locally. There are also efforts underway to create an FAQ list for this new newsgroup. Send submissions and feedback to Tom Bodoh, bodoh@dgg.cr.usgs.gov. The new newsgroup doesn't yet appear on the readership report, due to its relatively recent creation.

Note also that the defunct rec.ham-radio hierarchy reappears this month. If the newsgroups are still active at your site, please try to persuade your your news administrators to delete them as these groups have been rendered obsolete (for about 2 1/2 years now) by the rec.radio.amateur hierarchy.

Finally, aus.radio is holding on to the anchor position. There is a newly-created FAQ for the hierarchy of aus.radio newsgroups. Send submissions and feedback to Mark Cheeseman, cheese@active.asstdc.oz.au.

Hello,

My amateur radio license is finally here. The call sign is KB8PIP.
I took the exam on June 12th and got the license today (Sept 9th).

Talk to you later :)

The source for the Motorola stuff is available on the net somewhere..... I did ftp it from somewhere to have a look at how they did it, but I can't remember where I got it from :-(

Ask an Archie server for 'dtmf.zip'.

1960. Freebies from ARRL HQ

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 18:39:33 UTC
From: lhurder@arrl.org
Message-ID: <2217@arrl.org>
Source record: 276578

A reminder to all that the American Radio Relay League
continues to make available to Amateur Radio Operators and
non-amateurs alike a wide variety of free materials and
services. Of particular interest to the not-yet-licensed
individual would be the ARRL Prospective Ham Package. In
the PHP, one would find:
-
1. Printouts of Volunteer Examination session
opportunities in his/her area.
-
2. Listings of Amateur Radio clubs in his location.
-
3. Helpful promotional material about the Amateur Radio
Service.
-
The already-licensed individual might well be interested
in another free ARRL publication, the ARRL Public Service
Communications Manual. The PSCM represents the "bible" of
public service communications, and clearly/concisely
points out how the ARRL National Traffic System and the
ARRL Amateur Radio Emergency Service function as a
cohesive unit to provide the maximum support to the public
both in times of disaster as well as "normal" times.
-
To obtain any of these free ARRL services, please
provide me with:
-
A. Your name
B. Your mailing address
C. A Specific request for either of the two services
above.
-

|> >partner brought up this last summer. But since his was a .6

The reason that there is no cell there is that place may be in a what is termed a Rural Service Area (RSA) outside of closed Metropolitan Service Area. The licenses in the MSA and RSA may be held by 2 different companies, thus out of the service area of the metro system 80 miles away. The investment of a cell can cost from 100k to 1M bucks, thus the traffic needs to justify its placement.

Interested in the Amateur Radio Service, but don't
know where to turn to locally for assistance?

Well, one of the very best ways to get a local helping
hand is to establish a relationship with your nearest
Amateur Radio club. And most areas of the country have
more clubs than you'd think possible.

Ah, but the eternal question is always "Say, just how
DO I contact an Amateur Radio club near me?"

Well, folks, do I have a deal for you!

For the price of a message to me here at ARRL HQ,
(SEEMS cheap enough!) and a specific request, I can get
you listings of more clubs than you'd ever want to visit.

To make it happen, please send me a message with your
name, your mailing address, and a specific request for the
Amateur Radio clubs in your area. I'll get them right out
to you.

And for those of you who are already licensed radio
amateurs, remember, your local clubs represent an ENORMOUS
resource for you.

Having trouble with TVI or local ordinances that
affect your capability to serve the public by way of your
Amateur Radio license? Interested in finding someone to
assist with a tower installation? Need to locate a
kindred spirit that understands YOUR concerns about
Amateur Radio satellite operation or digital networking
via Amateur Radio? Chances are that someone in your club
can help.

Another free service, brought to you by the world's
largest support organization for the Amateur Radio Service

-- the American Radio Relay League.

Know what? I expected that...you ought to come out to the SFV and see what's
actually happening. Jeff you're just not in touch with the situation. The hams
in the Valley were quit a mixed lot until the first few bandit machines went
on the air. now it's the hispanic ops telling the rest of us where to get off!

That's not fair either, and neither is the situation on 10m but I don't really
expect you to know about that either...suffice it to say the FCC and the ARRL
are MUCHO SCARED of a group call MALDEF...ever heard of it? Don't call me a
raving xenophobe, I'm playing by the rules and expect the others to do likewise!

From: glenne@sad.hp.com
Message-ID: <CD3pCt.5qJ@srgenprp.sr.hp.com>
Source record: 276675

I wrote:

: In case anyone is interested, I have a design for a 4.2 lambda (about
: 5' boom) yagi adapted from the NBS work which I originally built for my
: 904 digital radios. The first version, which followed the NBS
: literature exactly, was centered considerably below 904. This
: confirms what W1JR discovered about the NBS data. I built an identical
: pair of the things and measured their combined performance using a two
: port network analyzer. The result was that although they had a
: relatively narrowband match, below 2:1 only over 20 MHz or so, the gain
: of the system, including mismatch loss, was almost flat over about 100
: MHz. This arrangement looked rather like a bandpass filter from 800 to
: 900 MHz. Individual antenna gain is in the area of 14 dBd.

: I subsequently redesigned the antenna to shift the gain center up
: about 5 percent however, I still have the original dimensions around in
: case someone wants to build one. Construction is from standard Cu water
: pipe and 1/8" brazing rod. It should be under $5 is parts.

I have posted both old and new designs in PCL, UNIX compressed and the
older (lower frequency) yagi in HPGL formats. They are available by
anonymous ftp from col.hp.com under packet/n6gn/antenna. Please see
the README file for details.

richard chalk (rchalk@nyx.cs.du.edu) wrote:

: when you buy a house in a development that has restrictive covenants, your
: agreement to purchase says that you agree to abide by the covenants
: attached to the deed, and you should! If you don't plan to, then buy a house
: in a neighborhood that isn't restricted.

That's easy to say, but there are many communities where such houses do
not exist. I am fortunate to live in an area old enough to have older
homes. I bought a 30-year-old house on two acres out in the boonies, so
I could put up a tower without problems. But in many new "planned
communities" ALL the houses have restrictive covenants. If you don't
want to commute 100 miles to work, you are out of luck.

The 11th annual Sonoma County Radio Amateurs Inc. flea market will be:

Saturday, September 18. 1 hour north of San Francisco in the
Sonoma County wine country.

Vendor setup starts 6:30 AM, doors open 7:30 AM.

Free Admission! Lots of free parking.

Free door prizes!

Both indoor and outdoor selling areas available. Price $10 each.
Outdoor spaces will be larger this year. Tables provided for
indoor spaces only.

Food: Breakfast and lunch will be available.

Radio clinic: Test your radio and get a free printout of results.

VE Exams: All license classes. Bring the original and a copy of
your license, any CSCE's, photo ID and a checkbook.

Location: Holy Ghost Society hall, 7960 Mill Station Rd, Sebastopol
CA. From the south, take US 101 north from San Francisco to Hwy
116 to Sebastopol. Mill Station Rd. is just on the other side of
town. (Look for the large flea market sign.) Talk-in 146.73-.

Questions? Call Rick K6ZWB at 707-542-6907.

Sellers may pre-register by sending the following form and a check
to: SCRA, POB 116, Santa Rosa, CA 95402.

john@anasazi.com (John R. Moore) asks:

>Are most hams illiterate, or are people just being silly when they
>keep posting about Morris code? I'll bet there are hundreds of readers
>of this group who now think the correct spelling (and pronunciation)
>is Morris!

Well, what do you think it is? Language evolves - "an adder" (the
snake) used to be "a naddre", "an orange" used to be something like
"a norange" (Arabian 'naranj'). Think of it as evolution right in
front of your eyes.

If people can get away with spelling "lose" as "loose", putting those
superfluous apostrophes in "its", referring to amateur radio as HAM,
and talking about things "laying around" (which only birds do), all of
which you will see in every day's postings, there is already plenty for
you and others to police.

If calling it Morris didn't annoy some of the more fuddy-duddy readers,
it would probably fade away - tell a child not to say a rude word to its
parents, and what does it do? Besides, who cares what it's called? -
just get on the air and enjoy it.

Frivolousy yours,

Derek "miaow" Wills (AA5BT, G3NMX)

Just to say thanks to all the kind people who sent mail or posted replies to my request concerning the amateur stations at the US Antarctic bases - I received some really helpful replies, including the e-mail address for the South Pole (I fingered it and got "South Pole not logged in")...

: And what might these "other types" of modifications to the 202 be?

Well, for example, the HTX-202 has a deviation adjustment but no mic
gain adjustment. A friend soldered in a chip resistor to lower the
mic audio to a reasonable level.

I'm sure one could think of other possible modifications as well. For
example, how about an external analog S-meter? The LCD meter only has 8
segments, which does not give you much resolution. There already exists
an analog S-meter output inside the radio, it's just not hooked up.

1975. AURORA WARNING: Middle Latitude Auroral Activity Warning

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-09 21:29:01 UTC
From: oler@rho.uleth.CA
Message-ID: <9309092129.AA16845@rho.uleth.ca>
Source record: 276595

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

WARNING ISSUED: 20:30 UT, 09 SEPTEMBER

/\

VALID UNTIL: 19:00 UTC ON 14 SEPTEMBER

HIGH RISK PERIOD: 11 Sep - 13 Sep (UT days)
MODERATE RISK PERIOD: 10 Sep - 14 Sep

PREDICTED ACTIVITY INDICES FOR NEXT 5 DAYS: 08, 17, 40, 32, 18 (10 - 14 SEP)
(INPUT INTO THE AURORAL SIMULATION SOFTWARE *)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE - HIGH

POTENTIAL DURATION OF THIS ACTIVITY: 48 TO 72 HOURS

POTENTIAL LUNAR INTERFERENCE: LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD - VERY GOOD

APPROXIMATE OPTIMUM OBSERVING CONDITIONS (LOCAL TIME): NEAR LOCAL MIDNIGHT

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN OREGON TO SOUTH-CENTRAL IDAHO TO WYOMING TO NORTHERN
NEBRASKA TO SOUTHERN IOWA TO CENTRAL ILLINOIS TO CENTRAL INDIANA
TO OHIO TO PENNSYLVANIA TO NEW JERSEY AND POSSIBLY PARTS OF DELAWARE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

THE U.K. TO EXTREME NORTHERN FRANCE TO BELGIUM TO NORTHERN GERMANY TO
SOUTHERN SWEDEN TO SOUTHERN FINLAND TO NORTHERN RUSSIA. EXTREME
SOUTHERN REGIONS OF AUSTRALIA AND NEW ZEALAND MAY BE ABLE TO SPOT
WEAK OR DIFFUSE ACTIVITY ON THE HORIZON AND SPORADIC BURSTS OF
AURORAL RAY ACTIVITY DURING STRONGER SUBSTORM ACTIVITY, EXTENDING
SEVERAL TENS OF DEGREES ABOVE THE SOUTHERN HORIZON.

* Contact: Oler@Rho.Uleth.CA or COler@Solar.Stanford.Edu for more information
regarding the Auroral Activity Prediction and Simulation Software.

SYNOPSIS...

A large, recurrent solar coronal hole is due to rotate into a favorable
position and begin enhancing levels of auroral activity on 11 September.
This disturbance was responsible for producing a moderate intensity
auroral storm last month. The coronal hole responsible for producing

this activity has since grown in size and extent. Due to the recurrent nature of this disturbance and the exceptionally large latitudinal coverage of the coronal hole, confidence is high that this disturbance will produce an enhancement in auroral activity that may be observed from middle latitude regions. The disturbance should last approximately 48 to 72 hours and should become strongest during the UTC day of 12 September.

For those with our Auroral Oval Simulation Software, optimal input values of between 30 and 40 should be used on 12 September. Use the Internet command: "finger aurora@xi.uleth.ca" to obtain current forecast values and synoptical information.

This warning will remain active until 19:00 UT on 14 September when it will either be updated or allowed to expire.

** End of Warning **

I had an IC-24AT (recently stolen) that I modified for Tone Burst. The
IC-24ET required you to click the PTT twice and hold it down the second
click. The tone will sound through the speaker. I think it is a better
method than pushing a separate button.

Well let's see. Consider this actual car wreck I witnessed
a few years ago. One of the big ARES-types on our local repeater
also witnessed it.

8:30:00: Wreck happens
me: <picks up portable cellular phone as I pull over to the side of the
road and dial 911.>

8:30:10
911: 911, what is your emergency.
me: Cellphone, sandy plains and hwy 5. (I learned to do that in case my
battery or the cell drops out, they can dispatch to the address.)
There is a 2 car wreck with injuries between a blue car and a pickup
truck at the intersection of Sandy Plains and Hwy 5. I am looking in
the car now and see a child passenger with head injuries and the woman
driver possibly pinned behind the wheel. Driver in the truck is out
and walking around.
911: <dispatches fire, police and extraction team> What is your name.
me: John De Armond and my cellphone number is xxx-xxxx. I witnessed
the wreck so if I'm needed, my home phone is xxx-xxxx.
911: Thank you. Anything else?
me: No. Thanks.

8:31:00 <click> Call over.
8:31:10 I jot the license numbers on the back of my hand and then look
to see if either car occupant needs emergency first aid.

8:35:00 First responders arrive from the fire station a mile away.

Meanwhile our ARES hero leaps to the call of duty ...

8:30:00 Wreck happens
8:30:10 Our hero springs into action. He keys over the QSO in progress
and yells in that frantic voice normally saved for when they
drop the Big One "Break Break Break", the code that the local ARES
regards as sacred for emergencies but which everyone else uses
to join the conversation.
8:31:00 Not hearing the break because he was yacking, the current
talker unkeys. Our hero "break break breaks" again.

8:31:05: <next ham in the rotation> "Oh hi guy, howyadoing? yack yack yack
yack yack. So tell us what exciting's going on"
8:33:00 Hero: I have an emergency and need to use the patch.
8:33:05 Other guy: Oh OK, go right ahead.
8:33:10 Hero: WD4xxx on the patch <tone tone tone tone.>
8:33:20 Repeater: Invalid code
8:33:30 hero: Try again. <tone tone tone tone.>
8:33:40 repeater: <10 seconds of Star Wars sound effects> ring. ring.
8:33:50 911: 911, What is your emergency.
8:34:00 hero: This is amateur radio operator WD4xxx. Can you copy? O-V-E-R
8:34:10 911: <that "oh no, not again" tone> Yes I can copy.
8:34:20 hero: I have an emergency to report. O-V-E-R
8:34:30 911 <REAL exasperated tone> I'm listening and can copy.
8:34:40 hero: There has been an accident at <squawk, bleep, howl (30
seconds of misc pager, voice and other intermod howls) <click>>
8:35:00 First responders arrive but our hero doesn't know that because
he didn't stop.
8:35:10 repeater <robot voice> Emergency call completed. Call duration
xxxx seconds. Thank you for using WD4xxx repeater. Have a
nice day. <15 seconds to repeat the same message in Morris>
8:35:35 Hero: Damn. Try again. <tone tone tone tone.>
8:35:40 repeater: <10 seconds of Star War sound effects> ring. ring.
8:36:00 911: 911, what is your emergency
8:36:10 hero: This is amateur radio operator WD4xxx. We got cut off.
Can you copy? O-V-E-R
8:36:20 911: <in that "Oh God, why me" tone> Yes. Where is the wreck.
8:36:30 Repeater: <30 seconds of misc howls, beeps, pagers and other intermod>
8:37:00 Hero: Sorry about that. There is a two car wreck at the intersection
of Sandy Plains and Hwy 5. O-V-E-R
8:37:10 911: Did that involve a blue car and a pickup truck?
8:37:15 hero: Yes it did. O-V-E-R
8:37:20 911: Already reported <click>
8:37:25 Hero: <tone tone tone> Call complete.
8:37:30 repeater <robot voice> Emergency call completed. Call duration
xxxx seconds. Thank you for using WD4xxx repeater. Have a
nice day. <15 seconds to repeat the same message in Morris>
8:38:00 Another ham: Hey guy, way to go. Good job. Probably saved a life.
Makes you wonder what they'd do without us hams, huh? That's what
this service is all about.

John

IS this guy a ham? If he 'can be heard plainly' then that sounds like AM.
Very few Hams use AM *and* have an attitude like that at the same time.

However....could it be a CBer....? See if you can catch his call sign:

If its some weird name like "Dr. Burn-em-up" or a 3 or 4 digit number only,
then you got yourself a CB goodbuddy.

The cure would be to get those phones RFI proofed, and that gets us into a
legal touchy spot...we can not touch other people equipment...

Check out the files at ARRL for details / ideas for a cure.

DX Bulletin 48 ARLD048
~From ARRL Headquarters
Newington CT September 9, 1993
To all radio amateurs

SB DX ARL ARLD048
ARLD048 DX news

Thanks to KB8NW, the Ohio/Penn and YCCC PacketCluster Networks, ZS9A and KC1AG for the items in this week's bulletin.

DXAC NEWS RELEASE. DX Advisory Committee Recommends Reinstatement of Eritrea.

The ARRL DX Advisory Committee, DXAC, has voted unanimously to recommend that Eritrea be reinstated to the DXCC Countries List. Eritrea was deleted from the list November 15, 1962. Committee members were convinced that Eritrea has reemerged as a sovereign nation.

The DXAC was split on a recommended effective date. Nine voted for May 24, 1993; six voted for May 24, 1991; and one member voted for April 27, 1993. The majority voted in favor of the official Independence Day. The date of liberation is 1991.

This recommendation now goes to the ARRL Awards Committee for consideration. Please do not send QSL cards to the DXCC desk for Eritrea until it has been officially added to the list, and a date for accepting cards has been announced.

WALVIS BAY AND PENQUIN ISLANDS. According to Ian, ZS9A, a tentative date of February 28, 1994, was recently announced for Namibia's takeover of both Walvis Bay, ZS9, and the Penguin Islands, ZS0. The announcement pointed out that many details remain to be worked out and that this is only a target date.

EQUATORIAL GUINEA. Ed, 3C1TR, will be leaving September 11, but will try to be active on the lower HF and WARC bands before leaving. Check 3790 kHz around 0135z, 7180 to 7184 kHz around 0500z and the 21355 DX net around 1500z.

TANZANIA. Christoph, HB9HAL, was to be active by now. He was to receive his license upon his arrival September 1st, but there have been no QSN reports yet.

TAIWAN. BV2EL, was heard on 21255 kHz around 0100z. Either BV2BI, BV3CV, BV4CT, BV4MK, BV4OB or BV7FC can usually be found almost daily on 20 meter CW from 1200 to 1400z.

NAURU. JA2NQG, JI2UAY and JH2BNL will be active September 8 to 12 on 160 through 6 meters with CW, SSB and some FM.

JUAN DE NOVA. LU2NI reported on the French DX Net that FR5ZQ/J has been heard on 21171 kHz at 1600z and 14147 kHz at 1700z. No other details are known at this time.

MARSHALL ISLANDS. Ken, V73C, has been very active on 20 meter SSB. Check between 1130 and 1300z, and again at 0230z. Ken's other haunts include 7180 kHz at 0930z, 3800 kHz at 1115z and on 17 meters at 2345z. QSL via AH9C.

BRUNEI. Nigel, G3TXF, is visiting V85PB through September 11. He will concentrate on the lower bands including 30 meters with CW. Brunei's sunset is 1045 to 1100z. Nigel has been heard signing V85XF. QSL via G3TXF.

MACAO. Tony, XX9GD, was heard on 14197 kHz between 1145 and 1215z.

TOKELAU ISLANDS. Marcel, ON4QM, is active as ZK3DM until September 16. He favors SSB on 40 through 10 meters. Marcel was heard on the 14247 DX net at 0245z.

THIS WEEKEND ON THE RADIO. The ARRL September VHF QSO Party starts at 1800z Saturday and ends at 0300z Monday. Work as many grid squares per band as possible. Exchange grid square locator. Signal reports are optional. For further information, see page 102 in August QST.

The phone weekend of the Worked All Europe DX Contest runs from 1200z Saturday to 2400z Sunday. Complete rules appear in July QST on page 110.

The North American CW Sprint, sponsored by the National Contest Journal, runs for only four hours starting at 0000z Sunday, or Saturday PM local time. This is a fast paced event with unique rules. For details check page 103 of August QST.

As long as TTY (or it's digital offshoots) does not DISPLACE CW, then there is no problem....ie...take away from cw airspace, to give to TTY.

The real problem is, on TTY, one is oblivious to any one else on CW.... they run right over you until you give up....you can't fight a machine.

"segregating" each mode, I think, is not a bad idea.

> and not "September" "October" "December" "Remember" or whatever.

I've always found it interesting to note that some of the people that whine the loudest about no-coders and their poor operating procedure also seem to be the OFs who are either incapable of using or deliberately refuse to use the proper phonetic alphabet.

I tend to agree that these people aren't idiots. But to complain about another ham's procedure and then make a call like:

"America America Three Kilowatt Orange this is Water Nine Boston Doughnut"
[my apologies to AA3KO and W9BC if they exist/are reading]

smacks of the worst form of hypocrisy. Yes, there were other accepted phonetic alphabets (Able, Baker, Charlie ...) and if those were used I could accept that.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
September 10 to September 19, 1993

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

!!*!*!*!*!* NOTE *!*!*!*!*!*!*

Version 2.00a of our Professional Dynamic Auroral Oval Simulator is now available. Completely rewritten, this software now produces numerous types of map projections centered on any geographical location, including OBLIQUE AZIMUTHAL EQUIDISTANT maps where radio signal paths are projected as straight lines. Precise DMSP Satellite Observations of Auroral Activity characteristics are also plottable for any hour of any day from December 1983 to 1992, making this the most extensive and contiguous database of auroral activity observations presently available. Valuable for radio communicators, aurora photographers, and astronomers. The software is now Windows 3.x compatible and will operate under either Mouse or Keyboard control. Many additional features are also included. Contact Oler@Rho.Uleth.CA, or COler@Solar.Stanford.Edu for more information or call our computer BBS at (403) 756-3008. A recorded message containing additional information is also available at: (403) 756-2386.

DEFINITIONS:

Date (day only)
10.7 cm SOLaR radio FLuX forecast
HF Propagation Conditions for LOw, MIddle, HIgh, and POlar areas (see below)
HF Short Wave Fade Probability (in %)
HF Maximum Usable Frequency in +/- percent above seasonal normals.
HF Prediction CONfidence Level (in %)
VHF Sudden Ionospheric ENHancement Probs (in %), weighted for low-mid lats
PROBability of "s"poradic E (Es) during the UT day for low, mid and high lats
VHF AUroral BacKScatteR Probs (in %) for LOw, MIddle and HIgh Latitudes
VHF Overall Global DX Potential (in %) - weighted for Low and Middle latitudes
Geomagnetic Activity Kp Index (peak value - see below)
GeoMAGnetic Activity Ap Index (peak value - see below)
AURORAl Activity for LOw, MIddle and HIgh Latitudes (see below)

HF Prop. Quality rated as: EG=Extremely Good, VG=Very Good, G=Good, F=Fair,
P=Poor, VP=Very Poor, EP=Extremely Poor.
Probability of Sporadic E (Es) for the various latitudes is given in percent.
Kp Planetary Index rated: 0=V.Quiet, 1=Quiet, 2=Unstld, 3=Active, 4=V.Active,
5=Minor Storm, 6=Major Storm, 7=Maj-Sev Storm, 8=Severe Storm, 9=V.Severe.
Ap Planetary Index rated: 0-7=Quiet, 8-16=Unstld, 17-29=Active,
30-49=Minor Storm, 50-99=Major Storm, Severe Storm >=100.
Auroral Activity rated: NV=Not Visible, LO=Low, MO=Moderate, HI=High,
VH=Very High.

CONFIDENCE LEVEL: 70%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

1987. Re: Minimum volume power supply

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 00:41:24 UTC
From: faunt@netcom3.Netcom.COM
Message-ID: <FAUNT.93Sep9164124@netcom3.Netcom.COM>
Source record: 276602

Try to find an ICOM PS-35 power supply. It is a switching PS designed to install internally in a IC751, 271H and others, but works very well as an external unit for the IC-735. It's lighter and smaller than the TS50S, and the DC power plug fits! It'll require a hack to connect the AC line to the PS-35, and the AC switching will have to be jumpered, but that should be cheap and easy. Since it's designed for ham-radio service, it might cause less problems then a switcher designed for computers or other service, and might be available for less cost. You might even find one that somebody has installed, but is not using, like if they're running their shack on batteries.

73, doug

1988. Re: Strange HAM interfere

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 00:55:11 UTC

-=> In a message to All on 09-08-93 08:47, Tskloss@zeus.tamu.edu said: <=-

Ts> Here's the situation. A friend of mine was telling me the problem his
Ts> mother was having with a HAM who was living a few doors down (nice
Ts> neighborhood, in the northern hills of Austin Texas). It seems that
Ts> this HAM transmits at very high levels; high enough in fact to INDUCT
Ts> SOUND TO COME FROM A TELEPHONE THAT IS HUNG UP!!!!!

Ts> AM signal comes out of the telephone handset speaker. Plus, there is
Ts> interference on all the other appliances such as her television and
Ts> cordless phone. (we told her that he can indeed hear her conversations
Ts> as well as his other neighbors' cordless phones)

Only if he has a scanner! Ham transceivers don't tune in those frequencies
and the cordless phone won't put out as much power to cause interference
to him.

Ts> He [the HAM] is well aware of his interferences since all his
Ts> neighbors have complained, but still he persists that he is doing
Ts> nothing wrong.

If he is running withine legal limits, he isn't.

His antenna is a single vertical pole since antenna
Ts> structures are prohibited in the neighborhood.

Ts> seems to be a battle between the disgruntled residents and the HAM
Ts> who's personality is such that he once fired his pistol into the air
Ts> repeated times to quiet the dogs next door (probably for a DX he was
Ts> working on).

Sounds like a good way to shut them up.

Ts> Perhaps he is upset that they won't allow him to install his 50 foot
Ts> tower in his back yard and he is trying to get back at everyone as long
Ts> as he can... The residents are trying for a legal injuction to either
Ts> limit his power output, or halt his emmissions all together, but that
Ts> has turned out to be a long battle.

Hard to do due to federal preemptions, but there have been cases where hams
have had to reach agreements about operating hours and power restrictions
due to nusence laws. If he had a big tower and a better antenna his signal
would be concentrated ABOVE everyone and he would cause LESS interference,
not to mention a little less power due to line loss. The taller the tower
the better. He would also be the likely one to get hit by lightning and be
put off the air. <g>

Ts> Alas, what can we do about people who tarnish the image of amateur
Ts> operators. It only takes one: we lost two repeaters (their prime
Ts> location, actually) because someone (unknown if it was indeed a HAM)
Ts> stepped on water drain line and leaked water down the side of the
Ts> building (or something like that, minor indeed).

Not to the tennent who got leaked on from an open window.

Now, no amateur
Ts> services are allowed on the building, which happens to be one of the
Ts> tallest in the neighborhood.

Find out who did and if it wasn't a ham, take them to court to have the
lease renewed.

... Does Windows NT stand for Windows NinTendo? or Not Today? or Nice Try?

Many thanks to all who responded to my posting asking about experiences and opinions of the Radio Shack HTX-202. The overwhelming majority of the opinions were favorable, especially given the current sale price.

I was just a bit disappointed to hear about the HTX's 'spur' at 146.76, but I was also slightly amused by this, since the photos of the HTX-202 in Radio Shack advertising (including the new catalog) invariably show that same frequency on the HT's display. Perhaps they just let it search for a busy frequency ;-)

All in all, it still looks like a good bet, and I'll probably go for it.

Thanks again, everyone.

Boxboro is held every other year. It is the New England Division Convention, and as of this past July, the convention is in Manchester, NH on Odd numbered years, and in Boxboro on even numbered years.
